RE: 10 CFR Part 73
[Docket Number PRM -73-12]

Dear Mr. Michael Lesar:

This letter is written in support of the proposed changes by Committee to Bridge the Gap to 10 CFR Part 73. Additional security measures at all nuclear powered energy facilities must be implemented with great thought to previous terrorist attacks and the mindset that attended those horrific events.

Conventional wisdom would require, at the least, measures to prevent attack by air to our nuclear facilities. While I am unfamiliar with the original design criteria for the reactor facilities, there should be no hesitation in reinforcing the structures to secure them further. Any additional measures proposed would be a blessing for the millions of Americans that would be exposed to radioactive contamination should there be a catastrophic terrorist event at one of the facilities.

Thank you for your consideration and support of the proposed changes by Committee to Bridge the Gap.

Respectfully submitted,

Renee Donato Nelson
President
Concerned Citizens to Stop Outside Dumping

CC: Congressman William Thomas
Dan Hirsch
