Subject: Renewal of your NRC license 01-25316-01

1. It is NRC's current licensing policy to identify sealed sources by manufacturer and model number on the license. If this is not possible because the sealed sources you are requesting are of foreign origin and not registered as sealed sources then these items should be requested as form "any".
2. In review of your described radioactive materials program and quantities of byproduct materials requested, it appears that the Type A or Type B broadscope license would be appropriate. Please review 10 CFR 33.11- 14 . Some additional information may be needed and/or modifications made to your program to fit the regulatory definitions.
3. Your requested possession limits and any sealed sources that are not registered and therefore listed as form "any", would likely require a decommissioning funding plan and associated financial assurance mechanism in accordance with 10 CFR 30.35.
4. We note that you have indicated an alternate Radiation Safety Officer (RSO). Our current licensing policy does not recognize the alternate RSO position. Full program responsibilities must remain with the RSO , however, duties may be delegated. Please confirm your understanding of the RSO's responsibility.
5. Please describe the details of your materials control (inventory control) program.

This preliminary review was not comprehensive but was done to identify any obvious and significant issues early in the renewal process to facilitate renewing the license.

You may reply by facsimile to 610 337-5269 and refer to Mail Control No. 136222. I may also be reached at 610 337-5303.

Thank you in advance.
