**Subject:** Response to Public Comments

Attached is my first draft of the response to the public comments for OpManAx, excluding the ones received late from NEI. This provides some additional background for the Wednesday AM meeting on the NEI comments. Note that NEI's prime comment on removing the detection-suppression requirement was raised earlier and has already been addressed, although we can reconsider if anyone thinks this should be done. Their comment on expanding the rulemaking to all of III.G has also been addressed as this was raised elsewhere. Their third major comment was to eliminate the Equipment Pre-conditions criterion, which has already been combined with the Equipment criterion, without removing any of its meat. If anyone thinks this should be discarded, we can discuss. The rest of their comments were criterion specific, and the main subject of Wednesday's meeting.
