Subject: Response to NEI Comments

Not to be included in the overall response write-up, but for our own purposes, I've begun compiling the responses we made at yesterday's meeting to the more notable NEI comments. I've gotten through the intro material, i.e., up to the specific criteria. Take a look and add what I may have missed.

[Phil - I need your explanation with regard to fixed suppression and gaseous systems where you cited NFPA, etc.]
