From: Todd Jackson Villar, Sheryl Date: 2/3/05 3:00PM

**Subject:** Inspection 03036574/2005001, license 19-10306-02

Sheryl,

The bottom line on the info provided below is that I recommend this inspection be rescheduled for April 2006 - it is not a true "initial" inspection, but a change from a previously existing license. April 2006 would be the next regularly scheduled inspection. More details below.

MEMORANDUM TO: File

FROM: Todd Jackson, Senior Health Physicist

SUBJECT: JUSTIFICATION FOR DEFERRAL OF SCHEDULED INSPECTION

REFERENCE: License No. 19-10306-02

Docket No. 030-36574

This license was issued as new on July 28, 2004, with priority 3. The license replaced license 45-00953-01 for the facility at Ft. Belvoir, VA. The reason apparent in the related licensing documentation for issuing the new replacement license was that the responsibility for the location of use at Ft. Belvoir was transferred to the US Army Research, Development and Engineering Command at Aberdeen Proving Ground, MD.

The most recent inspection at Ft. Belvoir was conducted under the previous license, on April 22-24, 2003. The next inspection would routinely be scheduled for April 2006, and it appears it was scheduled for first quarter of 2005 as an "initial" inspection of the new license.

It should also be noted that NRC HQ Division of Waste Management has assigned Tom McLaughlin to manage the decommissioning of the affected room at Ft. Belvoir covered by this license, and he indicated he had visited the site about two months ago.

Manual Chapter 2800, Section 05.03, paragraph b describes circumstances under which it is acceptable to not alter the inspection frequency for a new license, and items 1 and 2 are both applicable for the referenced license. Therefore, I recommend this initial inspection be deferred to April 2006, as it would have been scheduled if the previous license had continued in effect.
