Dr. McWey,

We are having difficulty communicating by phone, so below are the questions I need you to respond to before I can process your license amendment request dated November 4, 2004.

1. Regarding the floor plan for the new Nuclear Medicine Department area (enclosed with your letter dated November 4, 2004), what (if any) areas are located above or below the areas where licensed material is used/stored? Have the new areas been designed to minimize doses to members of the public above or below?
2. What shielding is incorporated into the design of your new Nuclear Medicine Department area (i.e., wall thickness) to minimize doses to the public?
3. Are there any areas to be used for radioactive waste storage other than the hot lab?
4. When was the actual move date to the new area? Although you sent a letter notifying the NRC (dated August 12, 2004) regarding your impending move, did you request and receive an amendment before the new areas were used for activities authorized by your NRC license?

Thank you in advance for your quick response to these questions. If you need any further clarification, please respond to this e-mail or leave a message at 610-337-5056.

Joseph Nick
