Dear President Bush:

Too often in our distracted country we only act after the fact. We are not great at anticipating problems. This is often seen in the aviation business and now we see it in our battle with terrorism.

We didn't get re-enforced cockpit doors until hi-jacked planes killed thousands. I think we now have the same situation but literally millions of times scarier in the nuclear industry. Do we need to wait for people to "storm the cockpit" of a nuclear facility before we act?

I have not been an anti nuclear activist. But as a resident of New York I think it is criminally and morally negligent (and I feel that is an understatement) to not have the military guarding the Indian Point nuclear reactor. If September 11 taught us anything it is ANYTHING is possible. We can't hope our security problems away we must act. We have, I read, about 100 nuclear reactors in this country we must protect them at all costs.

We also must wind down the nuclear industry. Put billions into fast track fuelcell energy distribution so we can free ourselves from nuke power. Yes, this will be devastating to the nuclear business but it will create a juggernaut of another business and it is in all our interests.

Please let's not wait for 9/11 x 10,000 before we act. Be bold. Times have changed!

Thank you for reading this and my prayers and support are with you.

Best,

*Drew Greenland*
