Subject: DENY Dominion's application for an Early Site Permit

(577)

Dear US Nuclear Regulatory Comm,

Please register my opposition to any plans by Dominion to build any new nuclear reactors at its North Anna nuclear power station in Virginia. The site is unsuitable, and many important factors are not being considered in the decision of whether to approve Dominion's application for an Early Site Permit (ESP) at the site. Constructing new reactors would be bad for Virginia's environment, bad for taxpayers, and bad for residential and commercial ratepayers. I urge the U.S. Nuclear Regulatory Commission to DENY Dominion's application for an Early Site Permit, and for Dominion to instead focus on finding alternative methods of addressing expected increases in energy demands over the coming years.

We are not ready to safely use nuclear power. The human race is simply not responsible enough as yet. We are, however, ready for technologies of efficiency. How about those standards for new air conditioning and heat pump efficiency that President Bush removed early in his first term. They should be reinstated. For that matter, how about the Kyoto accords? Our current policies actually seem to encourage more demand for energy, when it should be encouraging more efficient ways to use what generating capacity we already have. We live in a finite world, and simply cannot continue to grow industry ad infinitum.

Sincerely,

mark lackey
