John,

We will be able to grant you an extension until March 4th, this way we will have enough time to review your results and complete the certificate.

Procedures are being worked on to allow for licensees to have access to the webpage, but I can not give you an estimated timeline because it may still be awhile before new procedures are worked out.

Tomas,

Just back in the office today, was down at the HPS Mid-year. We will need more time, I have everything completed except the testing results. We expected them this week but the testing lab ordered a load cell for the bend test and they wrong one was delivered. I think we will have everything by next week but if you could extend the response date until March 14th that will give us extra room and allow us to spend a day reviewing the testing results.

On a different note, I doubt the NRCs SS&D page will never be available to the general public via the web, which I think everybody in this industry is in agreement with. Do you know if the NRC is planning on giving access to licensees that need access to the database. I rely heavily on the SS&D page to determine if the activity in an expended sealed source is recoverable for recycle.

Thanks for all your work,

John J. Miller, CHP
