Subject: Number of small sources & uses			
<p>Summary:</p> <p>Current license or the renewal application specified how many of the check sources the licensee possesses or needs. I called Mr. Snyder to verify this but he was not available due to illness, and Mr. Compton answered my call. He stated that they have two small cobalt 60 sources of nominal value 10 microcuries each and 5 cesium-137 sources of 30 microcuries each. He also stated that they do not need addition sources. He confirmed that these sources are used for checking their instruments.</p>
