The attached pictures were taken today at Point Beach Unit 1 and please post those on the DRS Web if possible. These pictures show the Unit 1 upper head CRDM penetrations as viewed from the access ports in the insulation and service structure (note that the white deposits on the CRDM nozzles are not boric acid, they are reportedly sealer mastic applied on the previous head insulation package). Pic 296 is Cindy Pederson and Mel Holmberg on the staging surrounding the head and the last picture 300 shows boric acid at the packing of an SI accumulator valve.
