Subject: RE: DATES FOR Follow-on expert elicitation meeting--confirmed

I think the "ground rules" are that "anything goes" so long as hot shutdown can be achieved. I don't like these ground rules, but, as per my memo yesterday after talking with Phil, there apparently has already been an implicit acceptance of this based on our not specifying what OpManAx are "in" and "out" in the SECY that started this rulemaking. The only specifications on OpManAx acceptability were that they be feasible (and, by implication, reliable as well). So, symptom-based "recoveries," such as reclosing the opened PORV via fuse box pull, are "in" because they have been "greened" as non-compliances during inspections.

Again, this may not be "right," but I don't see us having the luxury of redirecting the rulemaking at this point - we can only work on enhancing the criteria, specifically the Time "Margin." If it helps, let's try to pick less "controversial" examples (no "recoveries," for example).
