Yes, this is where I was confused. Initially we were assuming that PEO #2 went to the "Div B CCW room," where he would eventually close the cross-tie valve. Wouldn't this be the same room where the valve positions would need to be verified? Thus, I was thinking that PEO #2 would get this job, but I was not sure. If it is in the same room or area, I would expect that PEO #2 would verify the valve positions and save PEO #1 the trip (unless it would help to have both participate). Of course, if most everyone was assuming that PEO #1 had to travel to verify and locally close the valves - then that is the way I will write it up - "we assumed what we assumed."

John

Subject: Re: ManAx EE Summary

For the fourth scenario, we assumed the procedure would read verify the position of the valves, so after PEO-1 opened the breakers of the MOV's, he would have to then proceed to the valves and locally verify their position.

 I've added my comments to the new section only (i.e., skipping the original and the appendices). Open in WordPerfect and use file/document/reviewer.

 Hi Everyone,

Attached is a draft of the summary report. I simply included another section in the summary of the first meeting to cover the second meeting. The new stuff runs roughly from page 21 to 33 (sections 3 and 4 are new), but I also made some modifications in the earlier sections. You can see what changes were made in the early sections by going into document review mode.

Please review and let me know what changes are needed. I will then send out to the expert panel for review.

I am also sending it to Mike for possible use in developing scenarios. Mike, you are also welcome to review if you want, or you can wait for the next version.

Thanks,
 John
