Constellation Energy

R.E. Ginna Nuclear Power Plant

April 19, 2005

Ms. Donna M. Skay
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
ATTN: Document Control Desk
Washington, D.C. 20555-0001

Subject: 2004 Annual Financial Report
R.E. Ginna Nuclear Power Plant
Docket No. 50-244

Dear Ms. Skay:

In accordance with the U.S. Nuclear Regulatory Commission requirements of 10 CFR 50.71(b) and 10 CFR 140.21(e), enclosed is the Constellation Energy 2004 Annual Report. This report contains the financial data required by both regulations.

Should there be any questions, please contact Thomas L. Harding at (585) 771-3384 for additional information.

Very truly yours,

Mary G. Korsnick

Financial Highlights

In millions except per share amounts

	2004	2003	% Change
Common Stock Data			
Reported (GAAP) earnings per share	\$ 3.12	\$ 1.66	
Loss from discontinued operations	\$ (0.28)	-	
Cumulative effects of changes in accounting principles	-	\$ (1.19)	
Special items*	\$ 0.16	\$ 0.09	
Earnings per share from continuing operations excluding cumulative effects of changes in accounting principles and special items**	\$ 3.24	\$ 2.76	17.4%
Dividends declared per share	\$ 1.14	\$ 1.04	9.6%
Average shares outstanding—assuming dilution	173.1	166.7	
Market price per share—year end	\$ 43.71	\$ 39.16	11.6%

Financial Data

Total revenues	\$12,550	\$ 9,688
GAAP net income	\$ 540	\$ 277
Loss from discontinued operations	\$ (49)	-
Cumulative effect of changes in accounting principles	-	\$ (198)
Special items (after-tax)*	\$ 27	\$ 14
Net income from continuing operations excluding cumulative effects of changes in accounting principles and special items**	\$ 562	\$ 461
Total assets	\$17,347	\$15,593
Total debt	\$ 5,294	\$ 5,392
Total common equity	\$ 4,727	\$ 4,141
Capital expenditures	\$ 762	\$ 761

Certain prior year amounts have been reclassified to conform with current year's presentation.

* Includes recognition of synfuel tax credits associated with 2003 production, workforce reduction costs, impairment losses and other costs and net (loss) gain on sale of investments and other assets.

** Represents a measure that is not determined in accordance with generally accepted accounting principles (GAAP) and should not be considered as an alternative to the comparable amount under GAAP. However, we believe the impact of discontinued operations, accounting changes and special items obscures trends in our results and that it is useful to consider our results excluding such items.

2002 Earnings: For 2002, our GAAP earnings per share were \$3.20. Excluding special items of \$0.68, our earnings per share were \$2.52.

2001 Earnings: For 2001, our GAAP earnings per share were \$0.57. Excluding special items of \$1.84, our earnings per share were \$2.41.

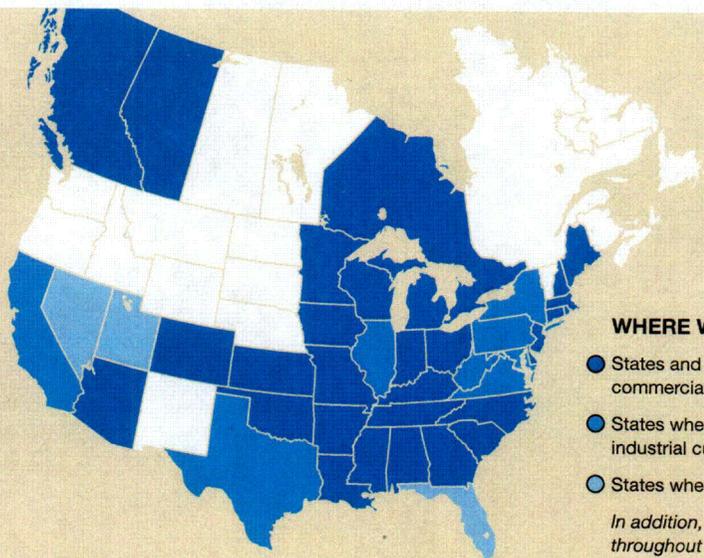

IN 2005, WE'RE WORKING TO...

Continue creating shareholder value that will produce superior returns.

Continue achieving 10 percent average annual growth in earnings per share.

Further strengthen our balance sheet by using free cash flow to reduce our debt-to-total capitalization ratio.

Drive productivity gains by lowering our cost and increasing output from our generation fleet—with a target of \$180 million in productivity gains by 2008.

WHERE WE'RE GROWING

- States and provinces where we serve retail commercial and industrial customers.
- States where we serve retail commercial and industrial customers and have generating plants.
- States where we have generating plants.

In addition, we serve wholesale customers throughout the United States and Canada.

Our Markets	Our Strong 2004 Performance	
Energy markets throughout North America and commodity markets across the globe.	<p>Achieved a 14 percent market share, making us the No. 1 supplier of wholesale competitive energy in North America.</p> <p>Grew peak load served 19 percent to 19,100 megawatts.</p> <p>Delivered 80 million megawatt hours of electricity to full requirements wholesale customers.</p>	<p>Won a large share of the total electric load awarded by utilities in the Northeast and Mid-Atlantic regions.</p> <p>Built an international coal procurement business, sourcing 5.4 million tons for international customers.</p>
Competitive energy markets throughout North America.	<p>Strengthened our No. 1 market position by increasing our share to 21 percent, more than 50 percent larger than our nearest market competitor.</p> <p>Increased peak load served by more than 50 percent, to 12,300 megawatts of electricity.</p> <p>Created a special North American sales organization to provide a single point of contact for large customers dealing with multi-site energy requirements across multiple markets.</p>	<p>Achieved outstanding customer loyalty and satisfaction—in an independent survey, 96 percent of our customers said they were happy they chose us, 96 percent also said they would choose us again, and 94 percent said they would recommend us to others.</p> <p>Continued to strengthen our sales force, brand recognition and product excellence.</p>
Competitive energy markets throughout North America.	<p>Increased sales volumes by 47 percent, to 279 billion cubic feet of natural gas.</p>	<p>Doubled our market share to 4 percent, ranking us among the top 10 competitive gas suppliers.</p>
Competitive wholesale energy markets across North America.	<p>Generated more than 55 million megawatt hours of electricity from our 107 generating units, a 7 percent increase over 2003.</p> <p>Completed the Calvert Cliffs outage in 29 days; set an industry record for a low-pressure turbine rotor replacement in 20 days.</p>	<p>Completed our acquisition of the Ginna Nuclear Power Plant ahead of schedule, adding to our overall earnings.</p> <p>Created the option to build a new nuclear plant by submitting an application to the U.S. Department of Energy for co-funding of activities leading to an early site permit for a future plant.</p>
Central Maryland—a 2,300-square-mile electric service territory, and an 800-square-mile natural gas service territory.	<p>Continued to provide stable earnings and cash flow by contributing 88 cents per share to our overall earnings.</p> <p>Achieved savings and significant progress in improving productivity—ranked in the top 10 percent of comparable companies in operating cost per customer.</p>	<p>Provided an industry model of how to make the transition from price-freeze service to competitive markets by completing a smooth transfer of 100,000 commercial and industrial customers.</p> <p>Earned top-quartile customer satisfaction ratings for the third consecutive year from the J.D. Power and Associates survey.</p>
Energy markets across North America.	<p>Maintained our position as North America's leading provider of energy consulting and management services.</p>	<p>Achieved 12 percent revenue growth.</p>
Energy markets across North America.	<p>Celebrated the one-year anniversary at our Nashville District Energy Plant, which delivered 100 percent reliability and exceeded all performance guarantees.</p>	<p>Achieved earnings targets for the fifth consecutive year.</p> <p>Continued to expand our "Build-Own-Operate-Maintain" project business.</p>
Maryland.	<p>Earned a 96 percent overall customer satisfaction rating and expanded our product line to include home security sales and monitoring and HVAC sales and service to the small commercial market.</p>	<p>Launched a new advertising and promotional initiative for the Smart Service suite of products, resulting in sales growth of 65 percent.</p>

Our performance values measure our results: speed, accountability, passion for excellence and creation of value.

Here's How We're Growing 10 Percent in a 3 Percent Industry... at Constellation Energy

WE'RE...

- A FORTUNE 200 competitive energy company headquartered in Baltimore.
- North America's No. 1 supplier of energy to wholesale and to retail commercial and industrial customers in competitive markets.
- A major generator of electricity with a diversified fleet of power plants located strategically throughout the United States.
- A regulated distributor of electricity and natural gas in Central Maryland.

WE GROW AN AVERAGE OF MORE THAN 10 PERCENT ANNUALLY BY...

- Increasing our competitive market share.
- Taking cost out of our business.
- Investing our cash to achieve superior returns.

IN 2004, WE...

Provided a 14.8 percent total return to shareholders, assuming reinvestment of dividends.

Earned \$3.24 per share—excluding special items—a 17.4 percent increase over 2003.

Strengthened our balance sheet by reducing our debt-to-total capitalization ratio.

Built a foundation for ongoing productivity gains by implementing Six Sigma and other programs to improve efficiency and output in all our operations.

	Our Businesses	Our Business Focus	Our Customers
Competitive Supply	Constellation Energy Commodities Group <small>(formerly Constellation Power Source—renamed in 2004 to better reflect our participation in electricity, natural gas and hydrocarbons)</small>	<p>Serving as an intermediary between producers and consumers of electricity, coal and natural gas—managing the acquisition of fuel for power generators, buying the power they generate and selling that power to distributors.</p> <p>Helping energy producers and customers manage price and supply risk.</p> <p>Developing our coal and natural gas businesses to meet the underserved and growing needs of energy producers.</p>	<p>Premier wholesale customers who are intensive energy users—includes many of the nation's leading distribution utilities and cooperatives.</p> <p>Energy producers and consumers that require a reliable counterpart to manage their price and supply risk.</p>
	Constellation NewEnergy	<p>Becoming an extension of our customers' energy procurement function—helping customers effectively manage and control energy costs and usage based on their unique business requirements.</p> <p>Delivering superior customer service, offering creative energy products and services and being the only company to provide full coverage of North America's competitive energy markets.</p> <p>Growing our cost more slowly than our gross margin.</p>	<p>More than 10,000 commercial and industrial customers in all industry segments.</p> <p>Nearly two-thirds of the FORTUNE 100 companies, including Cisco Systems, Ford, General Electric, Georgia-Pacific, Kroger, Merck & Co., Inc., Staples and others.</p>
	Constellation NewEnergy—Gas Division	<p>Providing natural gas supply and transportation-related services and aggressively taking advantage of growth opportunities—targeting sales of more than 450 billion cubic feet over the next five years.</p>	<p>More than 2,700 large commercial, industrial, municipal and power generation customers, and some of America's largest corporations.</p>
Generation	Constellation Generation Group	<p>Generating electricity from a strategically located, diversified fleet of plants with capacity totaling more than 12,500 megawatts...and driving productivity gains by lowering cost and increasing output.</p> <p>Becoming a recognized leader in energy generation through safe, efficient, reliable operations while continuing to grow and integrate new assets into our fleet.</p>	<p>Premier wholesale customers who are intensive energy users—includes many of the nation's leading distribution utilities, energy companies and cooperatives.</p> <p>Constellation Energy Commodities Group sells most of the power generated by Constellation Generation Group.</p>
Energy Delivery	Baltimore Gas and Electric	<p>Becoming a recognized leader in energy delivery—improving the reliability of our distribution system, reducing interruptions, and improving our response to outages.</p> <p>Maintaining and operating 250 substations, nearly 23,000 miles of distribution lines and 1,300 miles of transmission lines...as well as two peak-shaving plants, nine gate stations, and more than 6,000 miles of gas main.</p>	<p>More than 1.2 million electric and over 625,000 natural gas residential, commercial and industrial customers.</p>
Energy Consulting/Services	Fellon-McCord & Associates	<p>Providing energy consulting and management services—managing more than \$2 billion in natural gas supply and more than \$2 billion in electricity supply and transportation annually.</p>	<p>Large commercial and industrial customers, including Hanson PLC, Wabash Alloys and Church & Dwight Co., Inc.</p>
	Constellation Energy Projects & Services Group <small>(formerly Constellation Energy Source)</small>	<p>Providing customized solutions to increase energy efficiency, reliability and cost effectiveness—products include utility infrastructure outsourcing, on-site power generation and mechanical-electrical upgrades.</p>	<p>Government operations and facilities, and large customers, including Heinz Field in Pittsburgh and municipal buildings in downtown Nashville, Tenn.</p>
	BGE HOME	<p>Providing energy-focused, essential products and services that include heating and cooling systems, plumbing and electrical systems, home improvements and appliance service.</p>	<p>Residential and small commercial customers.</p>

Our foundational values guide our actions: integrity, teamwork, social and environmental responsibility and customer focus.

C02

We are succeeding by increasing our market share, taking cost out of our business and prudently investing our cash. In 2004, our earnings—excluding special items—grew 17.4 percent, well above the electric utility industry average.

Mayo A. Shattuck III
Chairman, President and CEO

10%

3%

The Way Energy Works

Our success comes from having a strategy for the competitive marketplace and the right products and services all along the value chain. We have an unmatched combination of risk management expertise, customer focus and logistical capabilities.

For us, this is the way energy works.

We are now the largest provider of power to wholesale and commercial and industrial customers in North America.

We are succeeding with our regulated utility, Baltimore Gas and Electric (BGE), which ranks among the best 10 percent of comparable companies in operating cost per customer and has earned top-quartile business customer satisfaction ratings from the J.D. Power survey.

We have also demonstrated success in the integration of businesses that fit with our strategic model. After adding a series of acquisitions to complement Constellation NewEnergy during 2003, we purchased the Ginna Nuclear Power Plant in 2004 and integrated its 495 megawatts and staff of 444 employees into our company quickly and seamlessly.

Throughout our business, we use rigorous methodologies, like Six Sigma, to improve processes and drive out inefficiencies.

By being a low-cost provider, we remain well positioned for the competitive marketplace. Electric power in particular is a unique commodity, vital to us all and of great economic importance to many businesses. Our customers rely on us to help them strategically manage their energy needs for their own competitive advantage.

Others are noticing. FORTUNE magazine has named us America's Most Admired Energy Company. We were also selected as 2004 Energy Company of the Year at the Platts Global Energy Awards. This type of recognition is gratifying and rewarding to our employees, customers and shareholders.

PRODUCING SUPERIOR RETURNS

From November 2001—the start of our competitive strategy—through the end of 2004, our stock price appreciated 102 percent. With dividends, that's a 27 percent average annual return to shareholders.

In 2004, total return to shareholders—with dividends reinvested—was 14.8 percent. Our stock price appreciated 11.6 percent. Our earnings excluding special items grew 17.4 percent to a record \$3.24 per share—well above our goal of 10 percent and well above the industry average.

We have kept our promises to Wall Street. Fourth quarter 2004 was the 13th consecutive quarter we have met or exceeded our earnings guidance. That's a solid track record of proven performance, and we expect to continue the trend.

We also expect to continue increasing our dividend in line with our earnings growth. In January 2005, we announced a 17.5 percent quarterly dividend increase, from 28.5 cents per share to 33.5 cents per share—equivalent to a new annual rate of \$1.34 per share.

COMPETITIVE MARKETS ARE THE FUTURE

Competitive markets are good for customers, for the economy and for companies that value efficiency. Competition in energy markets has done what it is supposed to do—it has improved efficiency and lowered costs.

In all, there are now 22 states and three Canadian provinces where customers are benefiting from competitive energy markets. More customers have more options in choosing their energy supplier, a trend we believe will continue.

We are a leading advocate for competitive markets, speaking out on Capitol Hill and supporting public policy efforts in states that have opened their markets to competition and in states that are considering further restructuring.

Our earnings growth projections are based on the existing competitive energy market structure. Over time, however, we believe customers in other states will demand the freedom to choose suppliers in order to reap the benefits of competition. We're well positioned to serve those new markets.

WE HAVE WHAT IT TAKES

Over the last couple of years, we have seen oil and natural gas price volatility and coal prices driven by increased demand from countries like China.

We minimize the effect of price fluctuations by managing toward price neutrality. Because we use a conservative hedging strategy that balances fuel and power price risk, our earnings growth will be driven by our focus on customers and operational excellence—rather than commodity price volatility.

Being a competitive entity that operates in an industry with shifting regulatory rules presents challenges ranging from evolving environmental requirements to more rigorous financial reporting standards mandated by the Sarbanes-Oxley Act.

We have what it takes to meet these challenges—a great strategy, strong assets and employees who consistently excel at executing our plan. In the end, our shareholders benefit from this combination.

WHERE WE'RE HEADED

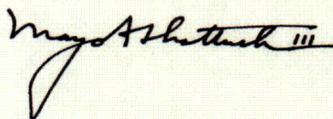

I am proud of what we have accomplished, and I am excited about our future. We are increasing our share in existing electricity markets and expanding our presence in natural gas and coal markets. At the same time, we are running our businesses more efficiently, leveraging our scale in competitive energy supply and achieving productivity gains in generation and staff activities.

I like where we are headed—continued growth and ongoing superior returns to shareholders.

We've shown the way energy should work. Our customers and employees benefit. Our company grows and prospers. And our shareholders are rewarded.

I am glad you are a part of it.

Regards,

Mayo A. Shattuck III
Chairman, President and CEO
March 11, 2005

EARNINGS PER SHARE

(excluding special items)

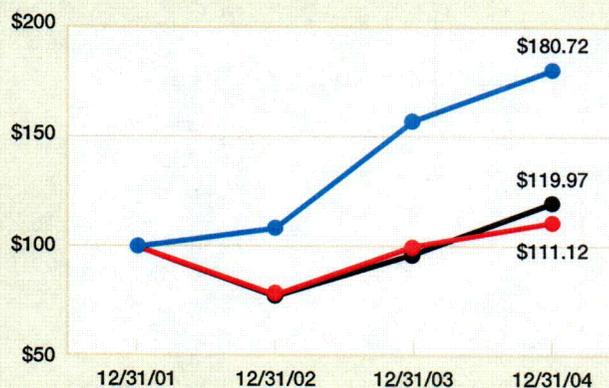

Growing More Than 10 Percent Annually

We've been achieving earnings per share growth averaging more than 10 percent annually, and we expect to continue that success.

Note: See the Financial Highlights table (including the GAAP reconciliation) on the inside front cover for more details.

VALUE OF A \$100 INVESTMENT

- Constellation Energy
- Dow Jones Electric Utility Index
- S&P 500

Creating Shareholder Value

An investment of \$100 in Constellation Energy common stock on December 31, 2001, was worth—with dividends reinvested—\$180.72 on December 31, 2004. That's significantly better than the Dow Jones Electric Utility Index and the S&P 500.

Old School We're Not We approach energy differently.

INCREASING OUR MARKET SHARE

We're No. 1 in competitive energy markets, and we're working to increase our market share.

In wholesale power—where our customers are mostly distribution utilities—we have a leading 14 percent share in competitive markets. In two years, our peak load served—over 19,000 megawatts—has grown nearly 140 percent.

For retail commercial and industrial customers, we're the only company that serves every North American competitive market. Our sales have doubled in the last two years and our leading 21 percent market share is nearly three times more than our closest national competitor.

For commercial and industrial natural gas customers, our 4 percent market share ranks us among the top 10 providers and we're just getting started.

Competitive energy markets will continue to grow. The 22 states that have already made the first move continue to restructure their energy markets. As more customers gain the option to choose their energy suppliers, more of them will demand what we offer: reliable, customer-focused service and risk management expertise at fixed prices.

DRIVING COST OUT OF OUR BUSINESS

Better, faster and at a lower cost—our goal is to achieve \$180 million in productivity gains by 2008. Our objective is to lower the per unit cost of what we do.

Up to \$150 million of our planned productivity gains will come from our generation fleet, where we're increasing the output of our plants, reducing expenses and streamlining our processes.

Over the past year, using productivity programs like Six Sigma, we have successfully implemented new systems and processes that have boosted efficiency throughout our company, and we anticipate realizing further benefits from these initiatives.

INVESTING TO ACHIEVE SUPERIOR RETURNS

Our strong cash flow helps us further strengthen our already strong balance sheet—our aim is a 40 percent debt-to-total capitalization ratio by 2006—and will enable us to invest in opportunities to grow our business.

We're cautious consumers of capital, continually looking at the best way to invest in our business.

We have a proven track record of successful acquisition and integration. The Ginna Nuclear Power Plant and NewEnergy—along with the follow-on competitive supply acquisitions we have made in natural gas and electricity—have produced earnings that are significantly higher than initial projections.

We'll continue to look for investments that will build our competitive energy business and create additional value for our shareholders.

GROWING 10 PERCENT IN A 3 PERCENT INDUSTRY

Increasing Our Market Share

- Grows our business.
- Builds scale that helps lower our per unit costs.
- Creates more opportunities to drive cost out of our business.

Investing in Our Business

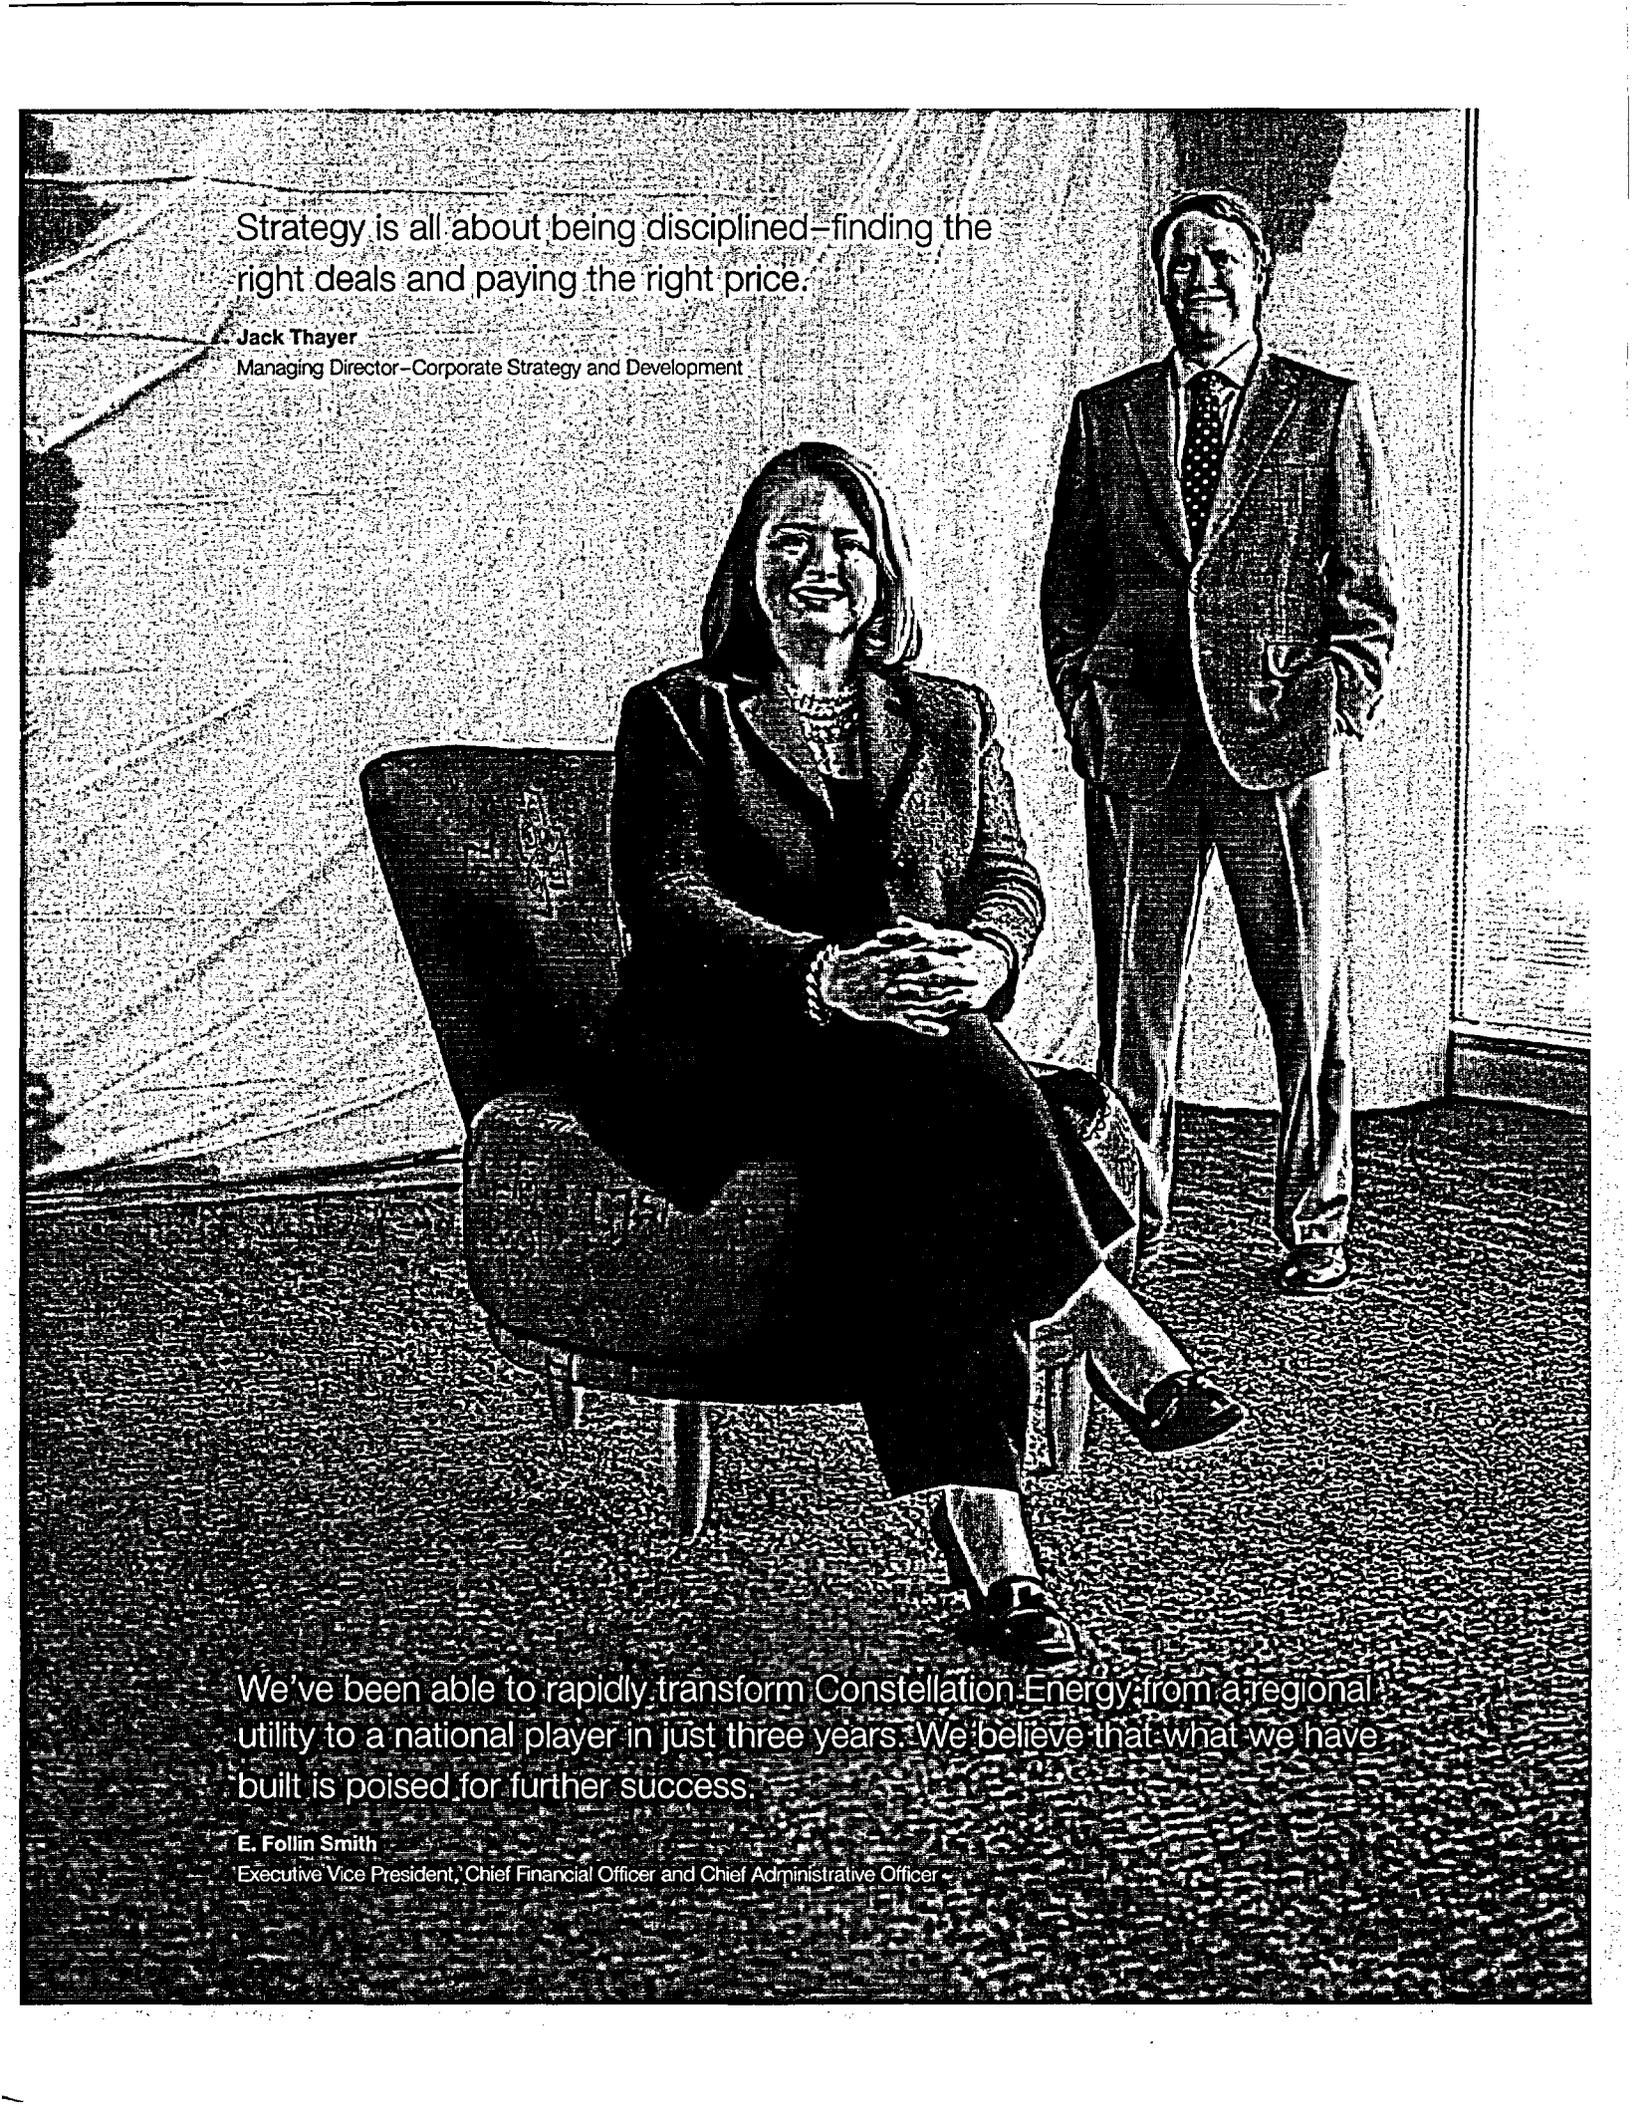

- Earns superior returns.
- Creates value for shareholders.
- Enables us to be price competitive to increase market share.

Driving Cost Out of Our Business

- Improves productivity.
- Increases output.
- Produces more cash to invest in our business.

WE'VE GROWN IN THREE YEARS

	2001	2004
Revenues (in billions)	\$3.9	\$12.5
Earnings Per Share (excluding special items)	\$2.41	\$3.24
Wholesale Competitive Energy		
Peak Load Served (megawatts)	8,000	19,100
Market Share	9%	14%
Retail Competitive Energy		
Peak Load Served (megawatts)	0	12,300
Market Share	0%	21%
Total Competitive Energy		
Peak Load Served (megawatts)	8,000	31,400

Strategy is all about being disciplined—finding the right deals and paying the right price.

Jack Thayer

Managing Director—Corporate Strategy and Development

We've been able to rapidly transform Constellation Energy from a regional utility to a national player in just three years. We believe that what we have built is poised for further success.

E. Follin Smith

Executive Vice President, Chief Financial Officer and Chief Administrative Officer

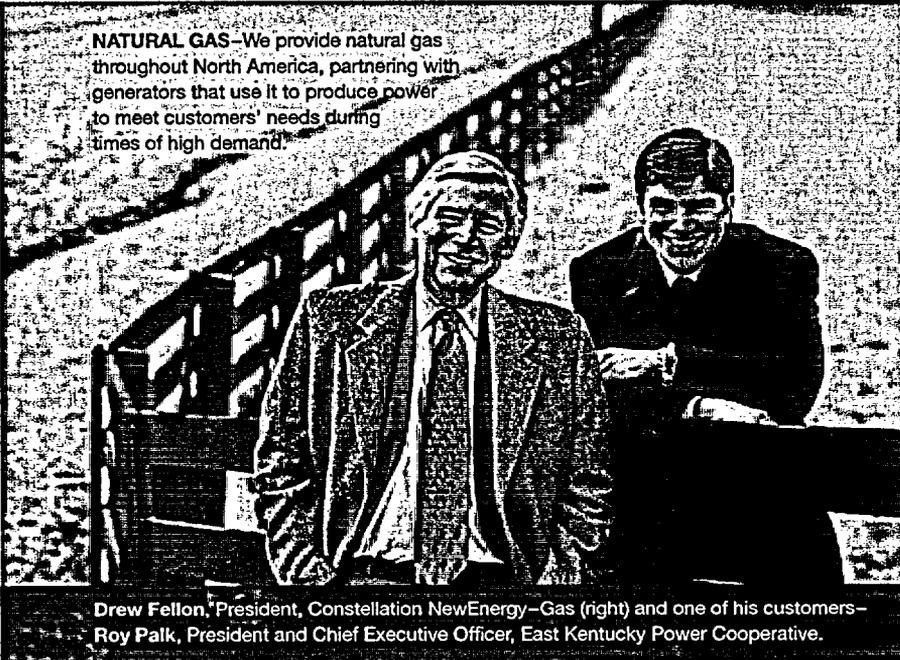

HYDROCARBONS—We're expanding our fuel logistics and hydrocarbons services for a growing list of customers that includes generating plants and energy producers in five countries.

Coal delivery at our H. A. Wagner Plant, Anne Arundel County, Md.

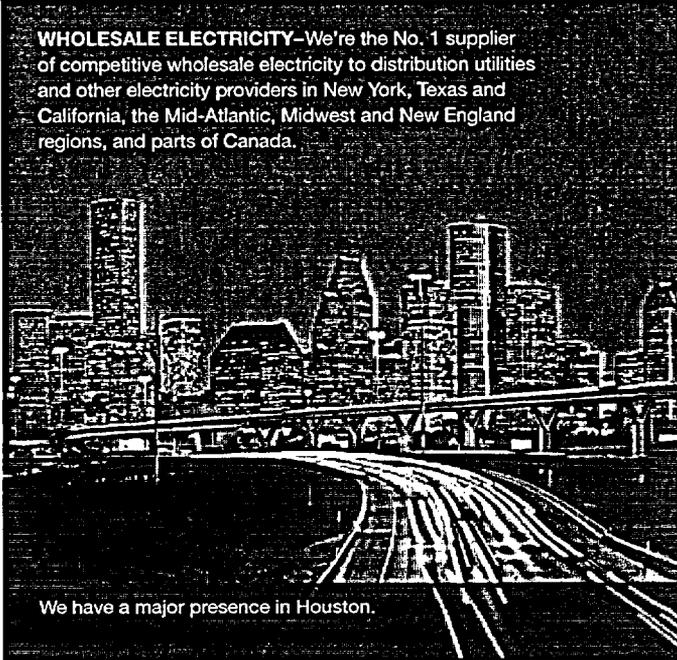

GENERATION—We generate electricity from a strategically located, diversified fleet of plants with capacity totaling more than 12,500 megawatts.

Maria Korsnick, site vice president, led a team of employees that smoothly integrated the Ginna Nuclear Power Plant—near Rochester, N.Y.—into our generation fleet.

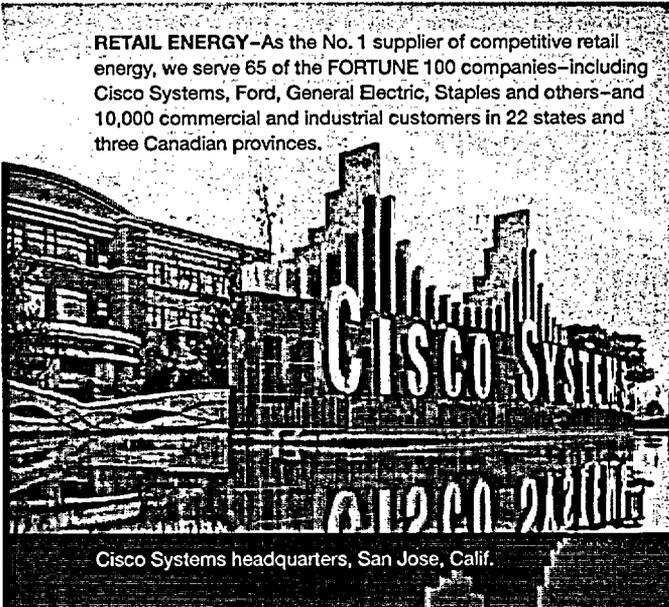

NATURAL GAS—We provide natural gas throughout North America, partnering with generators that use it to produce power to meet customers' needs during times of high demand.

Drew Fellon, President, Constellation NewEnergy—Gas (right) and one of his customers—Roy Palk, President and Chief Executive Officer, East Kentucky Power Cooperative.

WHOLESALE ELECTRICITY—We're the No. 1 supplier of competitive wholesale electricity to distribution utilities and other electricity providers in New York, Texas and California, the Mid-Atlantic, Midwest and New England regions, and parts of Canada.

We have a major presence in Houston.

RETAIL ENERGY—As the No. 1 supplier of competitive retail energy, we serve 65 of the FORTUNE 100 companies—including Cisco Systems, Ford, General Electric, Staples and others—and 10,000 commercial and industrial customers in 22 states and three Canadian provinces.

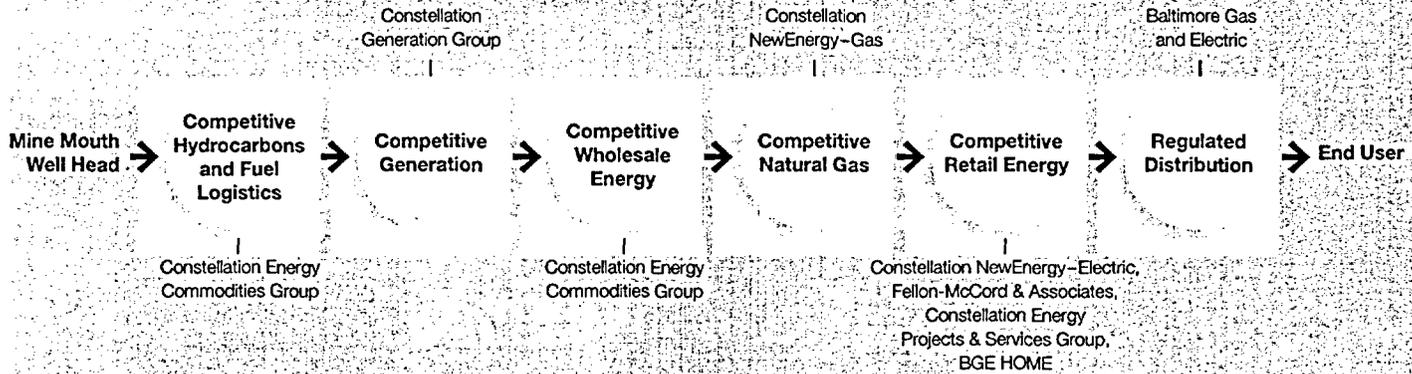

Cisco Systems headquarters, San Jose, Calif.

DISTRIBUTION—Through BGE, our regulated distribution utility, we deliver energy and top-rated customer service to more than 1.2 million electric customers and over 625,000 natural gas customers in Central Maryland.

Betty Ferguson, manager of BGE's customer care department in Baltimore, aims to provide hassle-free customer service.

SERVING CUSTOMERS ACROSS THE ENERGY VALUE CHAIN

We Know Energy And our customers benefit.

SERVING CUSTOMERS IN ALL MARKETS

We serve customers across the energy value chain—from the mouth of the mine or well head where energy has its start...to the homes and businesses where the energy is consumed.

We know energy and we know it well—providing fuel procurement and logistics services to producers and suppliers...generating power...supplying wholesale power to distribution utilities and other energy providers in competitive markets...supplying retail energy to commercial and industrial customers in competitive markets...supplying natural gas to large industrial customers and power producers...and delivering natural gas and electricity to residential and business customers.

Our world-class energy operation—with our competitive supply business growth engine—differentiates us from traditional regulated utilities. We're the leading company that serves customers in all North American competitive energy markets.

FOCUSING ON OPERATIONAL EXCELLENCE

We have a shared vision with our customers—to be the best at what we do. Our customers operate in competitive markets, and so do we. We focus on operational excellence and crisp execution.

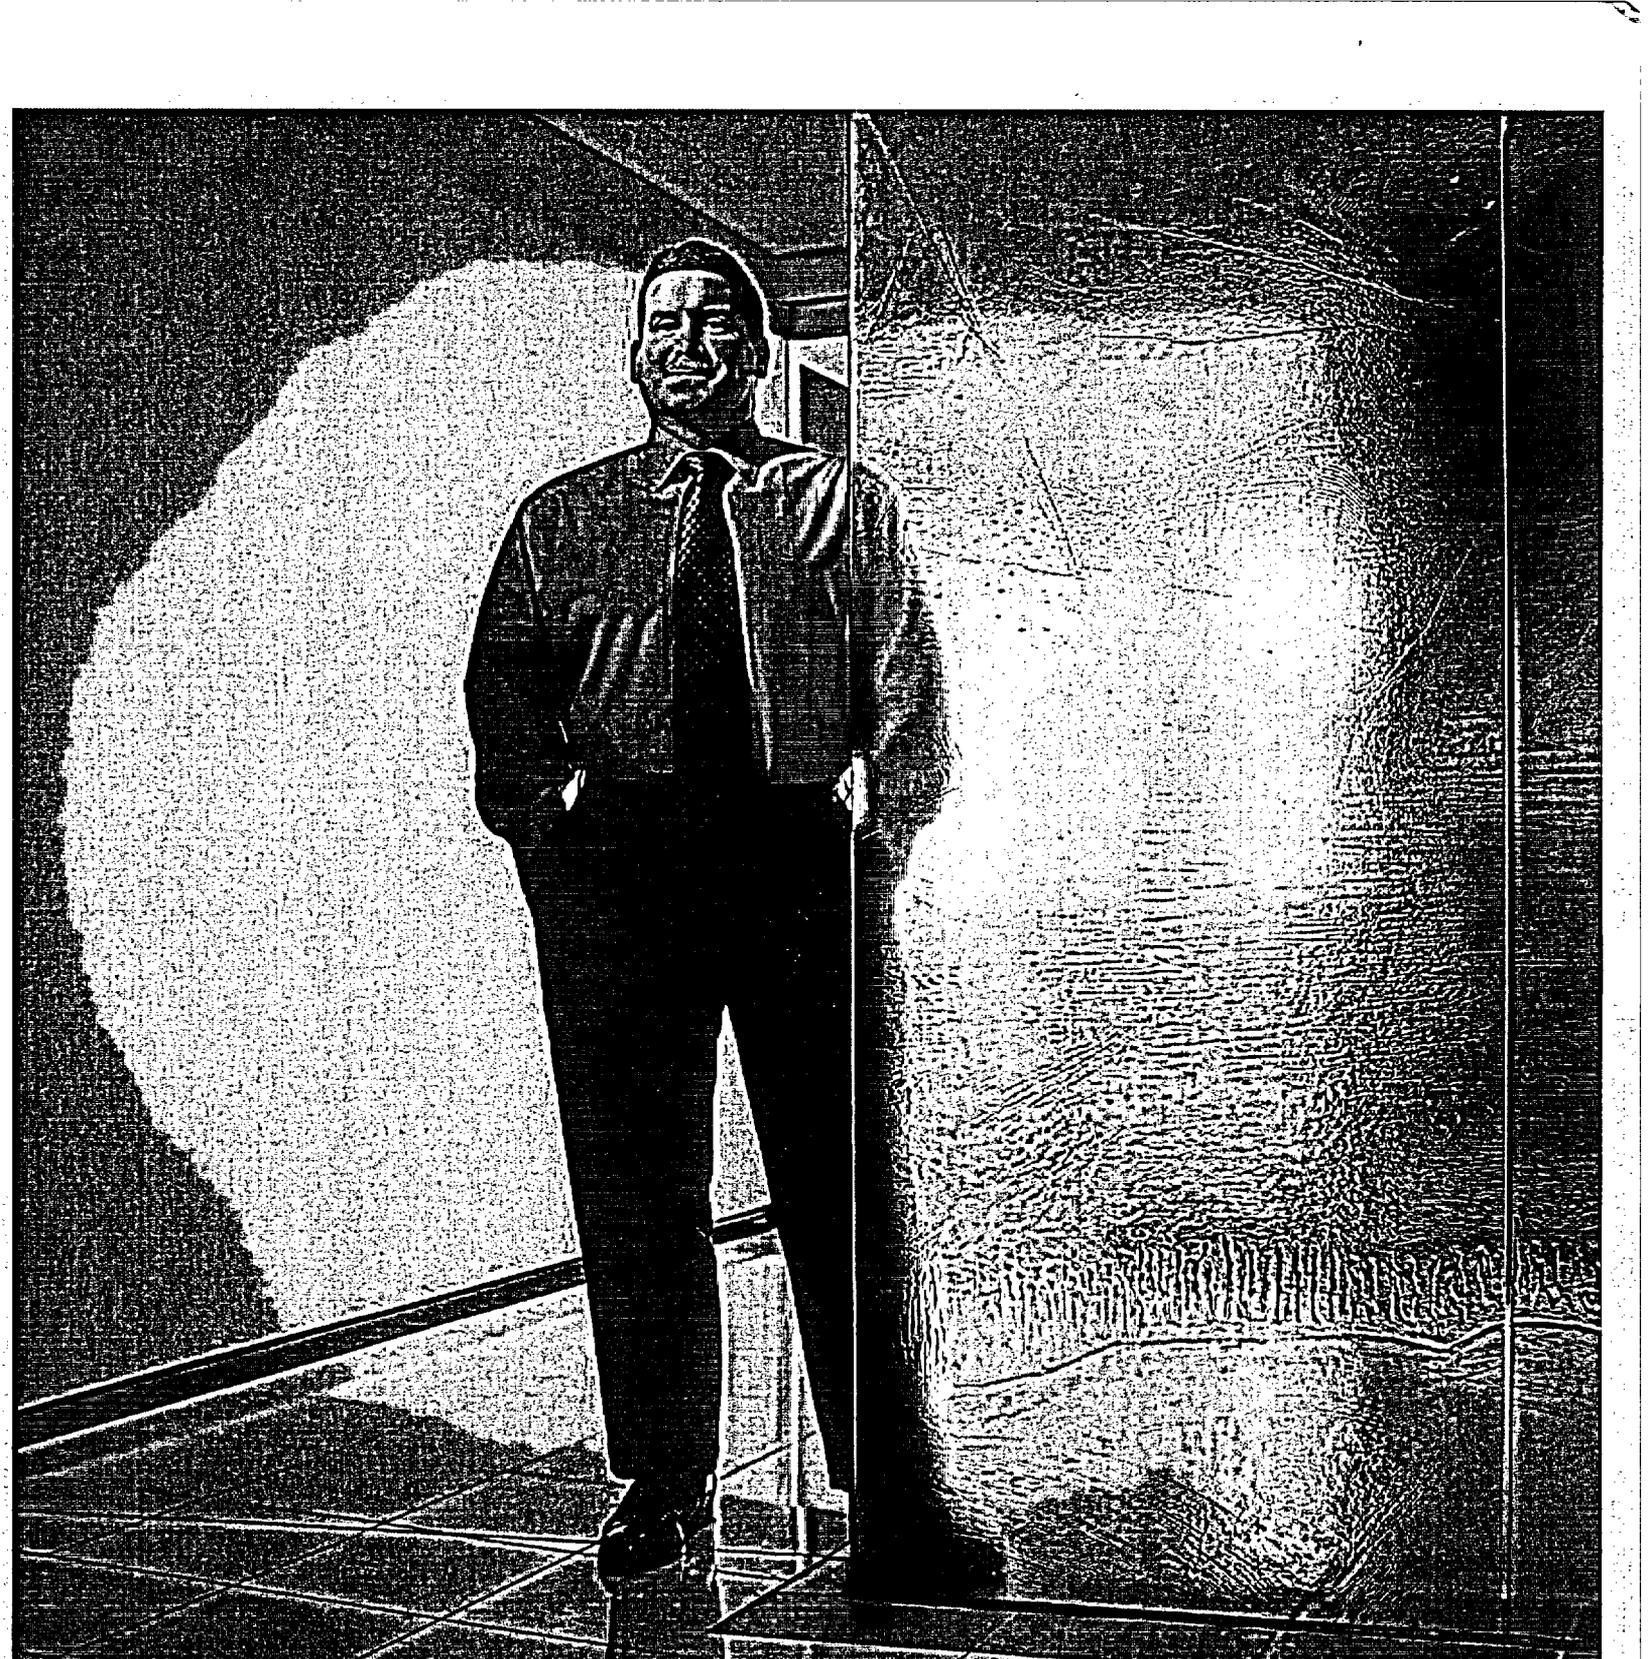

We pay particular attention to optimizing the sourcing and delivery of energy—by generating at low cost and obtaining it from low-cost producers, delivering it across the best routes and managing it so we have just the right amount and can deliver it to customers as it's needed.

ADDING VALUE TO OUR CUSTOMERS' BOTTOM LINE

Customers choose us because we add value to their bottom lines. While energy itself is a commodity, our energy products and services are not. We customize our energy products and services to fit our customers' individual needs or situations.

Because we provide a superior product at a reasonable price, an increasing number of customers are choosing us first. They realize that our energy management expertise adds value to their bottom line.

Our participation all along the energy value chain is dynamic, creating new opportunities to add value and meet customers' needs. For example, expanding the number of coal suppliers to our own generating plants to take advantage of favorable pricing in the world market not only took cost out of our business, it also developed into an opportunity for us to offer this service to others. We now have a growing business that sources 5.4 million tons of coal for international and U.S. customers.

We recognized early on the importance of strong risk management as a key to success in the energy business. We continue to develop and refine our risk management practices to meet the growth of our business.

John Collins
Senior Vice President and Chief Risk Officer

WHY CUSTOMERS CHOOSE US

1. We have thousands of customers in competitive energy markets. We save money for major distribution utilities, municipalities and cooperatives.
2. We group customer needs together and procure the energy—either from our own generating plants or from other producers and sources.
3. We take care of the details—making sure our customers get the energy they need when they need it at a fixed price or within a set price structure.
4. We charge for the energy, earning a premium for the value we add in managing it for customers.
5. Customers benefit from our low-cost provider position—enabling them to devote more time and resources to their own businesses.

Dynamic, Disciplined & Experienced Leveraging our risk management expertise.

GAINING AN ADVANTAGE

In competitive energy markets, winning the business takes competitive price plus customer focus. Being profitable takes risk management expertise and the ability to best aggregate the energy products customers need.

In short, being successful takes strong market knowledge and risk management capabilities. Our staff includes top experts in combining quantitative analytics with detailed physical market understanding. We can quantify, price and reduce variation in expected outcomes with a precision that is difficult for competitors to match.

Our leading risk management platform began with the first-class experience and technology we gained through our early partnership with Goldman Sachs. Over the last six years, we've enhanced and optimized it with our own energy expertise and investment.

We've become a great place to work, attracting very talented people and putting together the right mix of entrepreneurialism, intellectual capital, technology and market understanding.

It is the combination of those skills—along with the solid base of core energy expertise that comes from our 189 years in the energy business—that gives us an advantage.

SUCCEEDING WITH FINANCIAL STRENGTH

We're succeeding because we're a financially strong company that manages risk extremely well.

Our financial strength comes from having a strong cash flow and balance sheet and tremendous liquidity.

We have a high-performance generation fleet—with a concentration of low-cost, baseload plants—that produces electricity using a variety of fuels. Our plants are strategically located in and near competitive markets.

Taking advantage of economies of scale, we combine the power we produce with the electricity that we buy, creating an optimal source of energy for our customers.

We operate conservatively. Strong risk management controls and metrics provide a powerful tool for safely navigating the energy markets.

OUR BUSINESS MODEL DELIVERS

Our strong, disciplined risk management approach has enabled us to develop a proven business model that delivers results.

Our financial strength, an unwavering commitment to sound business practices and a dedication to upholding the highest ethical standards are hallmarks of the way we do business.

Our fast-growing competitive energy business and its backlog of future business—anchored by our regulated utility business—make us a leader in an industry in which customers must procure energy.

That need won't go away, and we're committed to being their supplier of choice.

On Everybody's Short List

We constantly focus on customers.

ENERGY CAN BE A STRATEGIC ASSET

When wholesale and retail customers buy energy wisely, they gain a competitive advantage.

We help customers manage energy as a strategic asset. As the No. 1 supplier in wholesale and retail markets, we provide value-added services and products that go beyond the direct supply of energy. We meet the needs of some of the biggest distribution utilities in North America, as well as the needs of more than 10,000 of the largest corporations and best-run small businesses. Our customers include 65 of the FORTUNE 100 companies.

A group of 78 Texas companies that pooled together to gain the most competitive rates for electricity chose us because we maximize buying power while also addressing complex energy requirements. Under the contract—valued at more than \$100 million—we've become the electricity provider for companies located from Dallas and Fort Worth to southern Texas.

SIMPLIFYING THE COMPLEX

Simplifying the buying and managing of energy for our customers requires a thorough understanding of the variability and nuances of the power generation

and delivery network. It's the nature of the competitive energy industry.

It's easy to do business with us. Dedicated to being the best at meeting customers' needs, we're the only supplier offering coverage in all competitive energy markets.

Our size and reach enable us to serve large regional wholesale customers, as well as large commercial and industrial customers, many with multiple sites across several states.

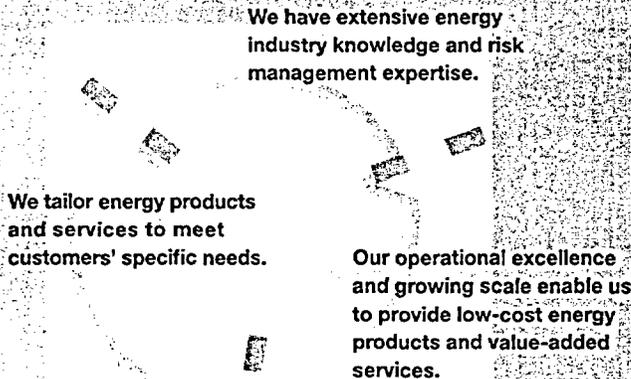

We've become an extension of our customers' energy management and procurement function, helping to optimize their results while meeting their specific needs.

OUR STRATEGY STARTS AND ENDS WITH OUR CUSTOMERS

We provide customers the best value for their energy procurement. We also advise customers on market conditions, regulatory trends and risk management methods.

Financially prudent customers increasingly look to us. After Ohio finalized regulation for a new power structure in mid-December, our team worked with 30 customers, saving them significant expense. It's an example of how we add value to our customers' bottom line.

WE'RE ON EVERYBODY'S SHORT LIST

We have extensive energy industry knowledge and risk management expertise.

We tailor energy products and services to meet customers' specific needs.

Our operational excellence and growing scale enable us to provide low-cost energy products and value-added services.

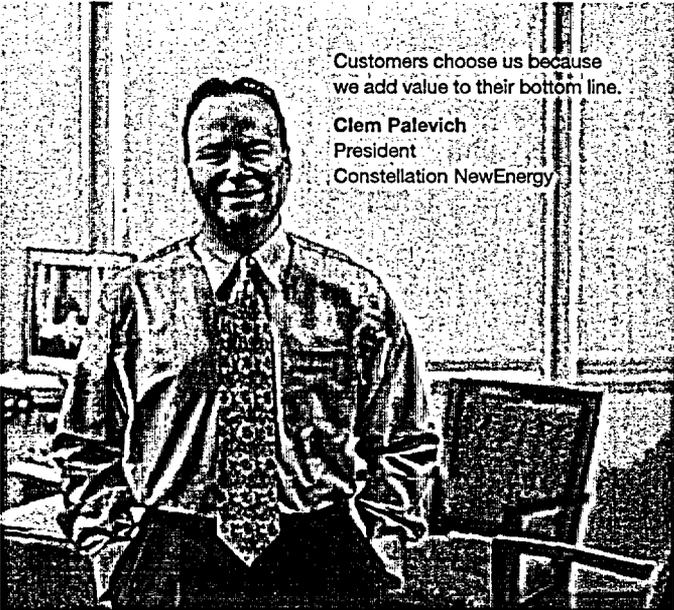

CUSTOMERS INCREASINGLY LOOK TO US

Competitive Energy Customers

Clem Palevich
President
Constellation NewEnergy

We're the power behind the three-time World Champion New England Patriots, providing electricity and cost savings to Gillette Stadium in Foxborough, Mass.

We treat energy as a strategic asset. As a provider of electricity and natural gas, Constellation NewEnergy meets our needs—with expertise and advice, service to our stores in multiple states and commitment we can trust for the long term.

Dan Bertocchini
Corporate Director of Energy Management
SUPERVALU, Minneapolis, Minn.

Mayo A. Shattuck III
Chairman, President and CEO

We Tell It Like It Is

Answering questions about our business.

Why are we succeeding in competitive energy markets? We're successful in competitive markets because we use our knowledge of the energy industry and our risk management expertise to constantly focus on meeting our customers' needs with superior products and services at a lower cost.

We're the only company that provides service in all markets where customers can choose energy suppliers. We're a one-stop energy shop offering electricity and natural gas and related value-added services—acquiring and supplying the energy and providing energy management advice and tailored billing.

We make a complex process simple, enabling our customers to spend more time on their specific businesses and less time trying to learn the energy business.

When we first began developing our strategy a little more than three years ago, we clearly saw the opportunities and built our company for competitive markets. Now we're successfully executing the strategy we put in place and building on the strength of our business model.

If our strategy is the right one, why aren't more companies entering competitive markets?

Competitive markets require companies to take charge of their own success. Having to compete for customers and business is a difficult transition for traditional regulated utilities, which are accustomed to having customers and rates guaranteed to them by regulators.

Even the stronger and more influential traditional regulated utilities prefer to depend upon what I call the false security of slow revenue growth in line with that of the overall economy and a rate of return determined by their regulators.

In addition, it is not easy to enter competitive energy markets. The scale, the assets, the reach and the multi-disciplinary expertise needed to be successful take a lot of time, effort and skill to build, develop and implement.

So what we see are niche players. There are financial firms that can trade energy very well but don't have the infrastructure that we do to serve customers' diverse energy needs. There are also small generators and suppliers that do well in small geographic areas but don't have the national reach and regional expertise that we provide to customers with multiple locations.

Where is energy restructuring headed?

Competitive markets are the future of the energy industry. I believe very strongly in competition and giving customers choice. It just makes good business sense for customers to be able to choose their energy supplier.

Competitive energy markets are working, and customers are saving money. Markets currently open to competition are restructuring further, giving more customers more flexibility and opportunities to choose their suppliers.

Open electricity markets like those in New York, Texas, New Jersey, Maryland, the New England states, Illinois,

Michigan and the Canadian province of Alberta are solid examples of how well-functioning competitive energy markets can yield tangible benefits for consumers who have the option to choose their supplier.

That success is gaining attention. We're clearly seeing more and more regulators become increasingly focused on competitive energy procurement as part of the overall energy resource mix.

I believe competitive markets eventually will dominate the energy landscape because it's clear they produce efficiencies, better service and new products that benefit customers.

What keeps our competitive energy profits from falling to razor-thin margins?

We do much more than simply provide natural gas and electricity. We optimize the sourcing and delivery of energy—sourcing it from the best providers, delivering it across the best routes and managing it so it can be delivered to customers on an as-needed basis.

Because of our size, expertise and market reach, we're able to bring together energy from many sources and choose the best delivery options...while also helping our customers manage their energy use. We have the ability and flexibility to put together the most cost-effective way to meet our customers' energy needs.

Doing those functions at a low cost per unit or per process enables us to earn higher margins.

Do high coal or natural gas prices hurt or help us? Increasing or decreasing prices for coal, natural gas or other fuels, and the resulting fluctuation in electricity prices, have a minimal effect on our earnings. We manage toward commodity price neutrality.

When we make a deal to buy or sell fuel or natural gas or electricity, we hedge to offset risk. That means if what we've agreed to buy or sell goes up in value, our hedge value goes down. Likewise, if what we've agreed to buy or sell goes down in value, our hedge value goes up.

As a result, we have protected ourselves from fundamental shifts in commodity prices.

As an investment, how do we differ from a traditional, regulated utility?

I believe that we offer a tremendous value proposition. We're exceeding our 10 percent average annual earnings growth goal and paying a dividend that we expect to continue increasing in line with our earnings growth. At the same time, our stock price has had a price-earnings ratio significantly below those of what we believe are comparable companies and industries.

Investing in a traditional, regulated utility generally is a standard income proposition. On average, they grow about 3 percent per year and pay dividends with yields usually in the 5 percent range.

We see ourselves differently. We see ourselves growing 10 percent in a 3 percent industry.

Board of Directors

CORPORATE GOVERNANCE

We are an industry leader in corporate governance. We maintain on our website—constellation.com—copies of the charters of each of the committees of the Board of Directors, as well as copies of our Corporate Governance Guidelines, Principles of Business Integrity, Corporate Compliance Program and Insider Trading Policy. In addition, 13 of the 14 members of our Board of Directors are independent. Michael D. Sullivan, one of our independent directors, serves as Lead Director.

INTERESTS ALIGNED WITH SHAREHOLDERS

In 2004, we adopted share ownership guidelines to further align the interests of our directors with the interests of our shareholders. The new guidelines require directors to acquire and maintain holdings of Constellation Energy stock equal to at least five times the annual cash retainer.

Executive Team

Our executive team has the right mix of expertise from the energy industry and from competitive businesses. Some have a deep knowledge of the energy sector that comes from being members of our team and working in the industry before we restructured as a holding company and became Constellation Energy in 1999. Others with competitive business experience joined us after our strategic decision in 2001 to build a business that would become the leader in competitive energy markets. That combination results in excellent execution of our strategy. Our success—near-term performance with a long-term focus—is a hallmark of our executive team.

Mayo A. Shattuck III
Chairman, President and Chief Executive Officer
Elected Chairman of the Board in July 2002, appointed President and Chief Executive Officer in November 2001... age 50... prior to Constellation Energy, was Chairman of the Board at Deutsche Banc Alex. Brown... also was Global Head of Investment Banking and Global Head of Private Banking at Deutsche Banc Alex. Brown, Vice Chairman at Bankers Trust and President at Alex. Brown and Sons.

Thomas F. Brady
Executive Vice President, Corporate Strategy and Retail Competitive Supply
Serves as managing executive for Constellation NewEnergy, BGE HOME and Constellation Energy Projects & Services Group... responsible for corporate strategy, acquisitions and dispositions, retail competitive supply, government affairs and corporate branding... previously was Chief Accounting Officer at Baltimore Gas and Electric and also served in various executive and management positions, including Vice President of Customer Service and Distribution... age 55... joined Baltimore Gas and Electric in 1969.

Thomas V. Brooks
Executive Vice President
President, Constellation Energy Commodities Group
Responsible for wholesale energy, commodity services and risk management for electricity, coal, natural gas and related commodities... previously was Vice President, Business Development and Strategy... age 42... joined Constellation Energy in 2001... prior to Constellation Energy, worked in the Fixed Income and Commodities Division at Goldman Sachs.

INTERESTS ALIGNED WITH SHAREHOLDERS

In 2004, we adopted share ownership guidelines to further align the interests of our executives with the interests of our shareholders. The new guidelines require our executives to acquire and maintain holdings of Constellation Energy stock ranging from three times base salary for senior vice presidents to seven times base salary for our CEO.

E. Follin Smith
Executive Vice President, Chief Financial Officer and Chief Administrative Officer
Responsible for finance, information technology, human resources, legal, audit, risk management and business process improvement...age 45...joined Constellation Energy in 2001...prior to Constellation Energy, was Senior Vice President and Chief Financial Officer of Armstrong Holdings, Inc....also served in various financial executive and management positions at General Motors.

Michael J. Wallace
Executive Vice President
President, Constellation Generation Group
Responsible for our power generation business...age 57...joined Constellation Energy in 2002...prior to Constellation Energy, was co-founder and Managing Director of Barrington Energy Partners, LLC...also was Chief Nuclear Officer and served in various executive positions at Unicom/ComEd.

Paul J. Allen
Senior Vice President, Corporate Affairs
Responsible for external affairs, government and regulatory relations, environmental policy and corporate communications...age 53...joined Constellation Energy in 2001...prior to Constellation Energy, was Senior Vice President and Group Head, Ogilvy Public Relations...also was a senior staff member at the Natural Resources Defense Council, Press Secretary for Senator Christopher Dodd (D-Conn.), and Foreign News Editor and Editor of "Morning Edition" at National Public Radio.

John R. Collins
Senior Vice President and Chief Risk Officer
Responsible for assessing and managing risk...previously was Managing Director—Finance and Treasurer of Constellation Power Source Holdings and also served in various leadership positions at Constellation Energy Commodities Group and Baltimore Gas and Electric...age 47...joined Baltimore Gas and Electric in 1988...prior to Baltimore Gas and Electric, served in various financial management positions at Bell Atlantic Corporation and Perdue Farms, Inc.

Kenneth W. DeFontes, Jr.
Senior Vice President
President, Baltimore Gas and Electric
Responsible for our regulated distribution utility business...previously was Vice President, Electric Transmission and Distribution, and also served in various executive and management positions...age 54...joined Baltimore Gas and Electric in 1972.

Beth S. Perlman
Senior Vice President and Chief Information Officer
Responsible for information technology initiatives and standardization of systems and architecture...age 44...joined Constellation Energy in 2002...prior to Constellation Energy, was Vice President of Wholesale Trading Technology and served in various other technology management positions at Enron...also served in financial and technology management positions at Lehman Brothers, Kidder, Peabody & Company and J.P. Morgan.

Marc L. Ugoi
Senior Vice President, Human Resources
Responsible for organizational effectiveness, staffing, labor relations, compensation and benefits...age 46...joined Constellation Energy in 2002...prior to Constellation Energy, was Senior Vice President of Human Resources at Tellabs, Inc....also served in human resources management positions at Platinum Technology, Inc., System Software Associates, Inc. and Amoco Corporation.

Understanding Our Form 10-K

One of our priorities at Constellation Energy is to provide you with clear, easy-to-read and easy-to-understand information about our company. We want you to know what we do, how we do it and how we're doing.

So we're working to make our Form 10-K—our annual report required to be filed with the Securities and Exchange Commission—more welcoming and less complex.

This special section is intended to be a guide, describing and summarizing some of the information contained in our Form 10-K and providing page numbers where more details can be found. Our complete Form 10-K follows this special section.

Breaking Down Our Form 10-K

Our Form 10-K has four parts:

- Part I** In-depth descriptions of our businesses.
- Part II** Our financial performance, the information in which investors are usually most interested.
- Part III** Directs readers to our proxy statement for details on our board of directors and executive officers and their compensation.
- Part IV** A listing of financial statement schedules and exhibits.

Over the next several pages, we provide descriptions and summaries of some of the major topics included in Parts I and II.

Part I: Our Businesses

Part I of our Form 10-K provides details about our businesses:

- Our merchant energy business.
- Our regulated utility--Baltimore Gas and Electric Company.
- Our other nonregulated businesses.

Also included is information about environmental matters, employees, properties and executive officers.

BUSINESS

PAGES 1-2

OVERVIEW

Our Company

We have a merchant energy business and a regulated distribution utility.

Operating segments

Our reportable operating segments are merchant energy, regulated electric and regulated gas. We also have certain other nonregulated business activities.

PAGES 3-9

MERCHANT ENERGY BUSINESS

Our business

We provide wholesale electricity and services to distribution utilities and municipalities...electricity supply and services and natural gas to large commercial and industrial customers...and we generate electricity.

Fuel source

Our electricity generated by fuel type in 2004: nuclear--52 percent, coal--32 percent, natural gas--10 percent, renewable and alternative--4 percent, and oil and dual oil-natural gas--2 percent.

Our competition

We encounter competition from companies of various sizes--having varying levels of experience and financial and human resources--and differing strategies.

Operating statistics for the last five years

Our revenues and megawatt hours generated have increased.

PAGES 9-13

BALTIMORE GAS AND ELECTRIC COMPANY

Our business

We're an electric transmission and distribution utility and a natural gas distribution utility with a service territory that includes the City of Baltimore and parts of Central Maryland.

Electric and gas operating statistics for the last five years

Revenues by type, sales to our customers, and the number of our customers.

NOTE: This special section is intended to be a guide. You can find more details about all these items in our Form 10-K. Our complete Form 10-K follows this special section.

Part I: Our Businesses (continued)

PAGE 13

OTHER NONREGULATED BUSINESSES

Our businesses

We offer energy solutions to residential, commercial, industrial and municipal customers.

PAGES 13-16

ENVIRONMENTAL MATTERS

We are subject to regulations concerning air quality, water quality and disposal of hazardous substances –over the last five years, our capital expenditures to comply with environmental standards and regulations were \$235 million.

PAGE 16

EMPLOYEES

We had approximately 9,570 employees at year end 2004.

PAGES 17-19

PROPERTIES

Our offices and facilities

Our corporate offices are in Baltimore. We have plants and marketing offices throughout North America and we also lease space internationally.

Our generating plants

We own more than 12,500 megawatts of generating capacity diversified by fuel type and located strategically throughout the United States.

PAGES 19-20

EXECUTIVE OFFICERS OF THE REGISTRANT

Our executive officers

Our executive officers have a diverse mix of energy, financial and other experience in competitive and regulated markets.

NOTE: This special section is intended to be a guide. You can find more details about all these items in our Form 10-K. Our complete Form 10-K follows this special section.

Part II: Our Financial Performance

Part II contains management's discussion and analysis of our results of operations and financial condition. It compares 2004 results to 2003, and 2003 results to 2002.

The sections in Part II include:

- Introductory Items—the basics.
- Management's Discussion and Analysis—the context.
- Financial Statements—the numbers.
- Notes to the Financial Statements—the details.

Introductory Items

The Basics

Here's information about our common stock, prices and dividends, and historical financial data.

PAGE 21

MARKET FOR REGISTRANT'S COMMON EQUITY AND RELATED SHAREHOLDER MATTERS

Our dividend information

We declared a dividend of \$1.14 per share in 2004 and increased our annual dividend rate to \$1.34 per share in January 2005.

Our stock price

The price of our common stock—based on New York Stock Exchange Composite Transactions—ranged from \$35.89 to \$44.90 in 2004.

PAGES 22-23

SELECTED FINANCIAL DATA

Summary of our operations and financial condition and our financial statistics for the last five years

Our results show the success of the strategy we've implemented.

NOTE: This special section is intended to be a guide. You can find more details about all these items in our Form 10-K. Our complete Form 10-K follows this special section.

The Context

Our management discusses in detail the financial results and condition of our company...and the way we manage our business.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

PAGE 24

INTRODUCTION AND OVERVIEW

We summarize how we have organized our discussion and analysis.

PAGES 24-25

STRATEGY

We are pursuing a balanced strategy to distribute energy through our North American competitive supply businesses and our regulated Maryland utility.

PAGES 25-27

BUSINESS ENVIRONMENT

Energy markets continued to be highly volatile in 2004 with significant changes in natural gas and power prices, and the Federal Energy Regulatory Commission has been reviewing the structure and various aspects of the wholesale energy market.

PAGES 27-30

CRITICAL ACCOUNTING POLICIES

The accounting policies that are most important to the portrayal of our financial condition—while also requiring difficult, subjective or complex judgment—include revenue recognition/mark-to-market accounting, evaluation of assets for impairment and asset retirement obligations.

PAGES 30-31

SIGNIFICANT EVENTS

Significant events that have affected us include a loss from discontinued operations, the recognition of synthetic fuel tax credits associated with 2003 production, workforce reduction costs, impairment losses, selling non-core assets, our acquisition of the Ginna Nuclear Power Plant and our dividend increase.

PAGES 31-47

RESULTS OF OPERATIONS

Our overall net income

Our net income for 2004 was \$539.7 million, an increase of \$262.4 million from 2003—changes in accounting principles reduced our net income by \$198.4 million in 2003, while higher earnings from our merchant energy business, regulated electric business, nuclear assets and certain economic hedges contributed to our 2004 earnings.

NOTE: This special section is intended to be a guide. You can find more details about all these items in our Form 10-K. Our complete Form 10-K follows this special section.

Management's Discussion and Analysis (continued)

Our net income for our merchant energy business

Our merchant energy net income was \$389.9 million in 2004, an increase of \$275.3 million from 2003—reflecting our continued growth and the effect of changes in accounting principles that reduced our merchant energy business net income by \$198.4 million in 2003.

Our net income for our regulated electric and gas businesses

Our regulated electric business net income for 2004 was \$131.1 million, an increase of \$23.6 million from 2003; and our regulated gas business net income for 2004 was \$22.2 million, a decrease of \$20.8 million from 2003.

Our net income from our other nonregulated businesses

We had a net loss of \$3.5 million from our other nonregulated businesses in 2004, compared with net income of \$12.2 million in 2003—mainly the result of a \$16.4 million net gain on sales of non-core investments and other assets in 2003.

PAGES 48-50

FINANCIAL CONDITION

Cash flow

Cash provided by our operations was \$1.1 billion in 2004, a \$29.0 million increase from 2003.

Security ratings

All of our security ratings are solidly investment-grade, all with stable outlooks.

PAGES 50-53

CAPITAL RESOURCES

Capital requirements

We're estimating that we'll need \$915 million in capital for 2005 and \$950 million in 2006 to fund existing and anticipated projects.

Funding our capital requirements

We expect to use internally generated funds and other available sources for the expansion of our merchant energy businesses and for the needs of our regulated electric and gas businesses and our other nonregulated businesses. We expect to fund acquisitions with a mixture of debt and equity, with an overall goal of maintaining a strong investment-grade credit profile.

Contractual payment obligations

We detail our contractual payment obligations for 2005 and beyond.

PAGES 53-58

MARKET RISK

We are exposed to energy commodity price and volatility risk, credit risk, interest rate risk, equity price risk, foreign exchange risk and operations risk. Our risk management program uses an effective system of internal controls and is overseen by our Board of Directors and the Audit Committee of the Board.

NOTE: This special section is intended to be a guide. You can find more details about all these items in our Form 10-K. Our complete Form 10-K follows this special section.

Our Financial Statements

The Numbers

We provide separate financial statements for Constellation Energy and Baltimore Gas and Electric Company. This section also includes our management and auditors reports on our financial information and the effectiveness of our internal controls.

FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

PAGE 59

REPORT OF MANAGEMENT

Our management accepts responsibility for the information and representations in our financial statements and concludes that our internal control over financial reporting was effective as of December 31, 2004—signed by Chairman of the Board, President and Chief Executive Officer Mayo A. Shattuck III and by Executive Vice President, Chief Financial Officer and Chief Administrative Officer E. Follin Smith.

PAGES 59-61

REPORTS OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

PricewaterhouseCoopers LLP states its opinion that our consolidated financial statements present fairly, in all material respects, the financial condition of our company and that we maintained, in all material respects, effective internal control over financial reporting at December 31, 2004.

PAGE 62

CONSOLIDATED STATEMENTS OF INCOME

Our net income for 2004 was \$539.7 million.

PAGES 63-64

CONSOLIDATED BALANCE SHEETS

Our total assets were \$17.3 billion at December 31, 2004.

PAGE 65

CONSOLIDATED STATEMENTS OF CASH FLOWS

Our net cash provided by operating activities continued to increase steadily—from \$1.01 billion in 2002 to \$1.06 billion in 2003 to \$1.09 billion in 2004.

PAGE 66

CONSOLIDATED STATEMENTS OF COMMON SHAREHOLDERS' EQUITY AND COMPREHENSIVE INCOME

We declared \$196.3 million in dividends during 2004, and our retained earnings were \$2.4 billion at year end.

PAGES 67-68

CONSOLIDATED STATEMENTS OF CAPITALIZATION

At December 31, 2004, our total capitalization was \$9.8 billion—\$4.8 billion in long-term debt, \$90.9 million in minority interests, \$190.0 million in preference stock, and \$4.7 billion in common shareholders' equity.

PAGES 69-72

BALTIMORE GAS AND ELECTRIC COMPANY FINANCIAL STATEMENTS

We include financial statements for BGE because it is a separate registrant required to file with the SEC.

NOTE: This special section is intended to be a guide. You can find more details about all these items in our Form 10-K. Our complete Form 10-K follows this special section.

The Details

We explain the processes, events, actions, projects, issues and specifics that produce the amounts reflected in our financial statements.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

PAGES 73-84

NOTE 1: SIGNIFICANT ACCOUNTING POLICIES

Accounting methods that we use and how they're applied throughout our businesses, along with the new accounting standards issued.

PAGES 84-87

NOTE 2: WORKFORCE REDUCTION, IMPAIRMENT LOSSES AND OTHER EVENTS

Our total special items in 2004 were \$90.2 million pre-tax, mostly due to a \$75.6 million loss from discontinued operations—and \$21.9 million after-tax, including recognition of \$35.9 million in synthetic fuel tax credits relating to 2003 production.

PAGES 88-89

NOTE 3: INFORMATION BY OPERATING SEGMENT

Our revenues, net income and other financial information, broken out by operating segment, shows the growth of our merchant energy business.

PAGES 90-91

NOTE 4: INVESTMENTS

Our investments are mainly financial investments held as assets for our nuclear decommissioning trust fund, and to secure certain executive benefits. We also own investments in power plants.

PAGE 92

NOTE 5: INTANGIBLE ASSETS

At December 31, 2004, our carrying amount of goodwill was \$144.8 million, and our net amount of intangible assets was \$357.4 million.

PAGES 93-94

NOTE 6: REGULATORY ASSETS (NET)

Our regulatory assets, net were \$195.4 million at December 31, 2004.

PAGES 94-97

NOTE 7: PENSION, POSTRETIREMENT, OTHER POSTEMPLOYMENT, AND EMPLOYEE SAVINGS PLAN BENEFITS

We provide details—obligations, assets, funded status, assumption details and company contributions—about our employee benefit plans.

PAGE 98

NOTE 8: CREDIT FACILITIES AND SHORT-TERM BORROWINGS

Our short-term borrowings—debt that matures within one year from the date it's issued—may include bank loans, commercial paper and bank lines of credit.

NOTE: This special section is intended to be a guide. You can find more details about all these items in our Form 10-K. Our complete Form 10-K follows this special section.

Notes to Our Financial Statements (continued)

PAGES 98-100

NOTE 9: LONG-TERM DEBT AND PREFERENCE STOCK

We provide details about our long-term debt—debt that matures a year or more from the date it's issued—and about our preference stock.

PAGES 101-102

NOTE 10: TAXES

Our income taxes for 2004 were \$172.2 million, which included the favorable impact of \$123.2 million of synthetic fuel tax credits.

PAGE 103

NOTE 11: LEASES

Our lease expense was \$34.1 million in 2004.

PAGES 103-108

NOTE 12: COMMITMENTS, GUARANTEES AND CONTINGENCIES

We provide details about our commitments and financial guarantees, environmental matters, legal proceedings involving us, our nuclear insurance coverage and certain issues concerning our California power purchase agreements.

PAGES 109-110

NOTE 13: HEDGING ACTIVITIES AND FAIR VALUE OF FINANCIAL INSTRUMENTS

We explain how we manage interest rate exposure and commodity price fluctuations...and disclose the fair value of our financial instruments.

PAGES 110-112

NOTE 14: STOCK-BASED COMPENSATION

In 2004, we granted stock options for 1.6 million shares at a weighted-average exercise price of \$39.60.

PAGES 112-114

NOTE 15: ACQUISITIONS

We completed our purchase of the Ginna Nuclear Power Plant...and provide details about the transaction, as well as about our other major acquisitions over the last three years.

PAGE 115

NOTE 16: RELATED PARTY TRANSACTIONS—BGE

Our merchant energy business provides BGE with a significant portion of the energy it needs and we provide BGE with the services of certain corporate functions.

PAGES 116-117

NOTE 17: QUARTERLY FINANCIAL DATA (UNAUDITED)

We break out our financial results—and those of BGE—by quarter for the last two years.

NOTE: This special section is intended to be a guide. You can find more details about all these items in our Form 10-K. Our complete Form 10-K follows this special section.

Glossary

aggregator—a company or agent that combines the energy needs of multiple customers and then buys or provides the energy and services needed.

British thermal unit (Btu)—the basic unit used to measure natural gas; the amount of natural gas needed to raise the temperature of one pound of water by one degree Fahrenheit.

competitive supply business—our growth engine; the portion of our merchant energy business that provides energy and value-added services to wholesale and retail customers located in competitive markets.

dekatherm—a measurement of natural gas; ten therms or one million Btu.

deregulation—in the energy industry, the process by which regulated markets become competitive markets, giving customers the opportunity to choose their supplier.

distribution—the delivery of energy to locations where customers use it—including homes, businesses, office buildings and industrial facilities.

Emerging Issues Task Force (EITF)—a group of financial professionals that advises the Financial Accounting Standards Board (FASB) about standards for reporting new transactions that may be unique and complex.

Federal Energy Regulatory Commission (FERC)—the U.S. agency that regulates interstate energy activities.

full requirements service—a product offering that handles all of a customer's energy needs through a combined service that can include generating or buying energy, managing load and power purchase agreements, scheduling delivery, managing risk, settling accounts and other related services.

generating capacity—the amount of electricity that can be produced by a specified generating plant or utility.

generation—the process of transforming other forms of energy—coal, natural gas, uranium, oil, wind, water or sun—into electricity.

hydrocarbons—fuels—including coal, natural gas and oil—used to produce energy.

independent system operator—a federally regulated organization that manages regional transmission lines to deliver electricity.

load serving—the process of providing wholesale customers with the energy they need to serve their retail customers.

megawatt—one million watts of electricity; enough electricity to light 10,000 100-watt light bulbs.

megawatt hour—one million watts of electricity consumed over one hour; enough electricity to keep 10,000 100-watt light bulbs lit for one hour.

merchant energy business—our nonregulated business, which combines generation from our power plants and energy we purchase with marketing and other services to provide energy solutions to meet the needs of customers throughout North America.

nonregulated business—the portion of our business that operates in competitive markets.

nuclear decommissioning trust fund—a federally mandated fund set up to ensure that nuclear power plant owners put aside enough money to pay for cleaning up and dismantling the plants at the end of their useful lives.

Nuclear Regulatory Commission—the U.S. agency that regulates commercial nuclear power plants and the civilian use of nuclear materials.

origination—the initiation of wholesale energy purchases and sales that may include value-added services along with the energy.

regional transmission organization (RTO)—a group of companies with responsibility for the planning and use of power transmission lines in a geographic region.

regulated business—the portion of our business whose primary operations and prices are set and controlled by the rules and activities of a state utility commission.

retail market—the market in which energy is sold directly to the customers who use it.

Standard Offer Service—in Maryland, the obligation of a utility—such as Baltimore Gas and Electric—to supply electricity to residential customers and as the provider of last resort (POLR) for those customers who have not chosen an alternate supplier.

transmission—the sending of electricity at high voltage, usually on lines running along high towers, from generating plants to substations, where it is then reduced to a lower voltage that is delivered to homes, businesses, office buildings and industrial facilities.

value at risk (VaR)—a statistical measure that helps evaluate risk by showing how much the value of mark-to-market assets or liabilities may change under various circumstances.

watt—the basic unit used to measure electricity; for example, a 100-watt light bulb requires more electricity and provides brighter light than a 60-watt light bulb.

wholesale market—the market in which energy is sold in large blocks to other utilities, distribution companies, electric cooperatives, municipalities and power marketers who then sell or distribute the energy to others.

Forward Looking Statements

We make statements in this report that are considered forward looking statements within the meaning of the Securities Exchange Act of 1934. Sometimes these statements will contain words such as "believes," "anticipates," "expects," "intends," "plans," and other similar words. We also disclose non-historical information that represents management's expectations, which are based on numerous assumptions. These statements and projections are not guarantees of our future performance and are subject to risks, uncertainties, and other important factors that could cause our actual performance or achievements to be materially different from those we project. These risks, uncertainties, and factors include, but are not limited to:

- ◆ the timing and extent of changes in commodity prices and volatilities for energy and energy related products including coal, natural gas, oil, electricity, nuclear fuel, and emission allowances,
- ◆ the liquidity and competitiveness of wholesale markets for energy commodities,
- ◆ the effect of weather and general economic and business conditions on energy supply, demand, and prices,
- ◆ the ability to attract and retain customers in our competitive supply activities and to adequately forecast their energy usage,
- ◆ the timing and extent of deregulation of, and competition in, the energy markets, and the rules and regulations adopted on a transitional basis in those markets,
- ◆ regulatory or legislative developments that affect deregulation, transmission or distribution rates and revenues, demand for energy, or increases in costs, including costs related to nuclear power plants, safety, or environmental compliance,
- ◆ the inability of Baltimore Gas and Electric Company (BGE) to recover all its costs associated with providing electric residential customers service during the electric rate freeze period,
- ◆ the conditions of the capital markets, interest rates, availability of credit, liquidity, and general economic conditions, as well as Constellation Energy Group's (Constellation Energy) and BGE's ability to maintain their current credit ratings,
- ◆ the effectiveness of Constellation Energy's and BGE's risk management policies and procedures and the ability and willingness of our counterparties to satisfy their financial and performance commitments,
- ◆ operational factors affecting commercial operations of our generating facilities (including nuclear facilities) and BGE's transmission and distribution facilities, including catastrophic weather-related damages, unscheduled outages or repairs, unanticipated changes in fuel costs or availability, unavailability of coal or gas transportation or electric transmission services, workforce issues, terrorism, liabilities associated with catastrophic events, and other events beyond our control,
- ◆ the actual outcome of uncertainties associated with assumptions and estimates using judgment when applying critical accounting policies and preparing financial statements, including factors that are estimated in determining the fair value of energy contracts, such as the ability to obtain market prices and, in the absence of verifiable market prices, the appropriateness of models and model inputs (including, but not limited to, estimated contractual load obligations, unit availability, forward commodity prices, interest rates, correlation and volatility factors),
- ◆ changes in accounting principles or practices,
- ◆ losses on the sale or write down of assets due to impairment events or changes in management intent with regard to either holding or selling certain assets, and
- ◆ cost and other effects of legal and administrative proceedings that may not be covered by insurance, including environmental liabilities.

Given these uncertainties, you should not place undue reliance on these forward looking statements. Please see the other sections of this report and our other periodic reports filed with the Securities and Exchange Commission (SEC) for more information on these factors. These forward looking statements represent our estimates and assumptions only as of the date of this report.

Changes may occur after that date, and neither Constellation Energy nor BGE assume responsibility to update these forward looking statements.

PART I

Item 1. Business

Overview

Constellation Energy is a North American energy company which includes a merchant energy business and BGE, a regulated electric and gas public utility in central Maryland.

Constellation Energy was incorporated in Maryland on September 25, 1995. On April 30, 1999, Constellation Energy became the holding company for BGE and its subsidiaries. References in this report to "we" and "our" are to Constellation Energy and its subsidiaries, collectively. References in this report to the "regulated business(es)" are to BGE.

Our merchant energy business is a competitive provider of energy solutions for a variety of customers. It has electric generation assets located in various regions of the United States and provides energy solutions to meet customers' needs. Our merchant energy business focuses on serving the full energy and capacity requirements (load-serving) of, and providing other energy products and risk management services for various customers, such as utilities, municipalities, cooperatives, retail aggregators, and commercial and industrial customers.

Our merchant energy business includes:

- ◆ a generation operation that owns, operates, and maintains fossil, nuclear, and hydroelectric generating facilities and interests in qualifying facilities, fuel processing facilities and power projects in the United States,
- ◆ a marketing and risk management operation that provides energy products and services primarily to distribution utilities, power generators, and other wholesale customers,
- ◆ an electric and gas retail operation that provides energy services to commercial and industrial customers, and
- ◆ an operations and maintenance consulting services operation.

BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of ten counties in central Maryland. BGE was incorporated in Maryland in 1906.

Our other nonregulated businesses:

- ◆ design, construct, and operate heating, cooling, and cogeneration facilities for commercial, industrial, and governmental customers throughout North America, and
- ◆ provide home improvements, service heating, air conditioning, plumbing, electrical, and indoor air quality systems, and provide natural gas to residential customers in central Maryland.

In addition, we own several investments that we do not consider to be core operations. These include financial investments, real estate projects, and interests in a Panamanian distribution facility and in a fund that holds interests in two South American energy projects. We discuss these non-core assets in more detail in *Item 7. Management's Discussion and Analysis—Results of Operations* section.

For a discussion of recent events that have impacted us, please refer to *Item 7. Management's Discussion and Analysis—Significant Events* section. For a discussion of our strategy, please refer to *Item 7. Management's Discussion and Analysis—Strategy* section. For a discussion of the seasonality of our business, please refer to *Item 7. Management's Discussion and Analysis—Business Environment* section.

Constellation Energy maintains a website at constellation.com where copies of our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and any amendments may be obtained free of charge. These reports are posted on our website the same day they are filed with the SEC. The SEC maintains a website (sec.gov), where copies of our filings may be obtained free of charge. The website address for BGE is bge.com. These website addresses are inactive textual references and the contents of these websites are not part of this Form 10-K.

In addition, the website for Constellation Energy includes copies of our Corporate Governance Guidelines, Principles of Business Integrity, Corporate Compliance Program and Insider Trading Policy, and the charters for the Audit, Compensation and Nominating, and Corporate Governance Committees of the Board of Directors. Copies of each of these documents may be printed from the website or may be obtained from Constellation Energy upon written request to the Corporate Secretary.

The Principles of Business Integrity is a code of ethics which applies to all of our directors, officers, and employees, including the chief executive officer, chief financial officer, and chief accounting officer. We will post any amendments to, or waivers from, the Principles of Business Integrity applicable to our chief executive officer, chief financial officer, or chief accounting officer on our website.

Operating Segments

The percentages of revenues, net income, and assets attributable to our operating segments are shown in the tables below. We present information about our operating segments, including certain special items, in *Note 3 to Consolidated Financial Statements*.

	Unaffiliated Revenues			
	Merchant Energy	Regulated Electric	Regulated Gas	Other Nonregulated
2004	75%	16%	6%	3%
2003	67	20	7	6
2002	35	42	12	11
	Net Income (1)			
	Merchant Energy	Regulated Electric	Regulated Gas	Other Nonregulated
2004	75%	22%	4%	(1)%
2003	66	23	9	2
2002	47	19	6	28
	Total Assets			
	Merchant Energy	Regulated Electric	Regulated Gas	Other Nonregulated
2004	71%	20%	7%	2%
2003	67	23	7	3
2002	65	24	7	4

(1) Excludes loss on discontinued operations in 2004 and cumulative effects of changes in accounting principles in 2003 as discussed in more detail in *Item 8. Financial Statements and Supplementary Data*.

Merchant Energy Business

Introduction

Our merchant energy business integrates electric generation assets with the marketing and risk management of energy and energy-related commodities, allowing us to manage energy price risk over geographic regions and time.

Constellation Energy Commodities Group (formerly known as Constellation Power Source), our wholesale marketing and risk management operation, dispatches the energy from our generating facilities and facilities with which we have power purchase agreements, manages the risks associated with selling the output and obtaining non-nuclear fuels, and enters into transactions to meet customers' energy and risk management requirements. Constellation NewEnergy, our electric and gas retail operation, provides electricity, natural gas, transportation, and other energy services to commercial and industrial customers.

Constellation Generation Group, our merchant generation operation, oversees the ownership, operations, maintenance, and performance of our fossil and nuclear generation and fuel processing facilities. Our generation capacity supports our wholesale and retail operations by providing a source of reliable power supply that provides a physical hedge for some of our load-serving activities.

Our merchant energy business:

- ◆ provided service to distribution utilities, municipalities, and commercial and industrial customers with approximately 31,000 megawatts (MW) of peak load in the aggregate during 2004,
- ◆ provided approximately 279,000 million British Thermal Units (mmBTUs) of natural gas to commercial and industrial customers during 2004, and
- ◆ managed approximately 12,530 MW of generation capacity.

We analyze the results of our merchant energy business as follows:

- ◆ Mid-Atlantic Region—our fossil, nuclear, and hydroelectric generating facilities and load-serving activities in the PJM Interconnection (PJM) region for which the output is primarily used to serve BGE. This also includes active portfolio management of the generating assets and other physical and financial contractual arrangements, as well as other PJM competitive supply activities.
- ◆ Plants with Power Purchase Agreements—our generating facilities outside the Mid-Atlantic Region with long-term power purchase agreements, including our Nine Mile Point Nuclear Station (Nine Mile Point), R.E. Ginna Nuclear Plant (Ginna), Oleander, University Park, and High Desert generating facilities.
- ◆ Wholesale Competitive Supply—our marketing and risk management operation that provides energy products and services outside the Mid-Atlantic Region primarily to distribution utilities, power generators, and other wholesale customers.

- ◆ Retail Competitive Supply—our operation that provides electric and gas energy products and services to commercial and industrial customers.
- ◆ Other—our investments in qualifying facilities and domestic power projects and our operations and maintenance consulting services.

We present details about our generating properties in *Item 2. Properties*.

Mid-Atlantic Region

We own 6,418 MW of fossil, nuclear and hydroelectric generation capacity in the Mid-Atlantic Region. The output of these plants is managed by our wholesale marketing and risk management operation and is hedged through a combination of power sales to wholesale and retail market participants.

BGE transferred all of these facilities to our merchant energy generation subsidiaries on July 1, 2000 as a result of the implementation of electric customer choice and competition among suppliers in Maryland, except for the Handsome Lake project that commenced operations in mid-2001. The assets transferred from BGE are subject to the lien of BGE's mortgage.

Our merchant energy business provides standard offer service to BGE as discussed in the *Baltimore Gas and Electric Company—Standard Offer Service* section. Our merchant energy business meets the load-serving requirements of various contracts using the output from the Mid-Atlantic Region and from purchases in the wholesale market. For 2004, the peak load supplied to BGE was approximately 4,100 MW.

Plants with Power Purchase Agreements

We own 3,855 MW of nuclear and natural gas/oil generation capacity with power purchase agreements for their output. Our facilities with power purchase agreements consist of:

- ◆ the Nine Mile Point facility,
- ◆ the Ginna facility, which was acquired in June 2004,
- ◆ the High Desert facility,
- ◆ the Oleander facility, and
- ◆ the University Park facility.

We own 100% of Nine Mile Point Unit 1 (609 MW) and 82% of Unit 2 (941 MW). The remaining interest in Nine Mile Point Unit 2 is owned by the Long Island Power Authority. Unit 1 entered service in 1969 and Unit 2 in 1988. Nine Mile Point is located within the New York Independent System Operator (NYISO) region.

We sell 90% of our share of Nine Mile Point's output to the former owners of the plant at an average price of nearly \$35 per megawatt-hour (MWH) under agreements that terminate between 2009 and 2011. The agreements are unit contingent (if the output is not available because the plant is not operating, there is no requirement to provide output from other sources). The remaining 10% of Nine Mile Point's output is managed by our wholesale marketing and risk management operation and sold into the wholesale market.

After termination of the power purchase agreements, a revenue sharing agreement with the former owners of the plant will begin and continue through 2021. Under this agreement, which applies only to Unit 2, a predetermined price is compared to the market price for electricity. If the market price exceeds the strike price, then 80% of this excess amount is shared with the former owners of the plant. The revenue sharing agreement is unit contingent and is based on the operation of the unit.

We exclusively operate Unit 2 under an operating agreement with the Long Island Power Authority. The Long Island Power Authority is responsible for 18% of the operating costs (and decommissioning costs) of Unit 2 and has representation on the Nine Mile Point Unit 2 management committee which provides certain oversight and review functions.

In May 2004, we filed an application with the Nuclear Regulatory Commission (NRC) for a 20-year license extension for both units at Nine Mile Point. The license on Nine Mile Point's Unit 1 expires in 2009 and in 2026 on Unit 2. We must demonstrate that we can ensure that the units will continue to perform their intended functions through the renewal period. The NRC will also consider the impact of the 20-year license extension on the environment. We expect approval of our application by early 2007 and have assumed license extension for purposes of recording depreciation expense and asset retirement obligations. However, we cannot predict the actual timing of the NRC's decision, or the impact of the decision, if any, on our financial results. If we do not receive the license extension, we will not be able to operate the Nine Mile Point units beyond 2009 and 2026.

In June 2004, we completed our purchase of the Ginna nuclear facility which is located in Ontario, New York from Rochester Gas & Electric Corporation (RG&E). Ginna consists of a 495 megawatt reactor that entered service in 1970 and is licensed to operate until 2029. The acquisition includes a long-term unit contingent power purchase agreement under which we sell 90% of the plant's output and capacity to RG&E for 10 years at an average price of \$44.00 per MWH. The remaining 10% of the plant's output is managed by our wholesale marketing and risk management operation and sold into the wholesale market.

The High Desert facility has a long-term power sales agreement with the California Department of Water Resources (CDWR). The contract is a "tolling" structure, under which the CDWR pays a fixed amount of \$12.1 million per month which provides CDWR the right, but not the obligation, to purchase power from the project at a price linked to the variable cost of production. During the term of the contract, which

runs until December 2010, the project will provide energy exclusively to the CDWR.

We have sold portions of the output of the Oleander and University Park facilities ranging from 50% to 100% under tolling contracts for terms ending in 2005 through 2009. Under these tolling contracts, our respective counterparties will pay a fixed amount per month and have the right, but not the obligation, to purchase power from us at prices linked to the variable fuel and other costs of production.

Competitive Supply

We are a leading supplier of energy products and services in North America to wholesale customers and retail commercial and industrial customers. We discuss our acquisitions of retail commercial and industrial operations in *Note 15 to the Consolidated Financial Statements*. During 2004, our competitive supply activities served approximately 22,400 MW of peak load and approximately 279,000 mmbtus of natural gas. Our competitive supply activities also include 2,015 MW from our Rio Nogales, Holland Energy, Big Sandy, and Wolf Hills natural gas-fired generating facilities. These four facilities are not sold forward under long-term agreements, and their output is used to serve customer requirements.

Wholesale and Retail Load-Serving Activities

We structure transactions that serve the full energy and capacity requirements of various customers outside the PJM region such as distribution utilities, municipalities, cooperatives, and retail aggregators that do not own sufficient generating capacity or in-house supply functions to meet their own load requirements. We also structure transactions to supply full energy and capacity requirements and provide natural gas, transportation, and other energy products and services to retail commercial and industrial customers.

These activities typically occur in regional markets in which end user customers' electricity rates have been deregulated and thereby separated from the cost of generation supply. These markets include:

- ◆ the Northeast (New England and New York),
- ◆ the Midwest region,
- ◆ the West region (Texas and California), and
- ◆ certain areas of Canada.

Contracts with these customers generally extend from one to ten years, but some can be longer. To meet our customers' load-serving requirements, our merchant energy business obtains energy from various sources, including:

- ◆ bilateral power purchase agreements with third parties,
- ◆ our generation assets,
- ◆ regional power pools, and

- ◆ tolling contracts with generation companies, which provide us the right, but not the obligation, to purchase power at a price linked to the variable cost of production, including fuel, with terms that generally extend from several months to several years but can be longer.

Portfolio Management

Our wholesale marketing and risk management operation actively uses energy and energy-related commodities in order to manage our portfolio of energy purchases and sales to customers through structured transactions. As part of our risk management activities we trade energy and energy-related commodities to enable price discovery and facilitate the hedging of our load-serving and other risk management products and services. Within our trading function we allow limited risk-taking activities for profit. These activities are actively managed through daily value at risk and liquidity position limits. We discuss value at risk in more detail in *Item 7. Management's Discussion and Analysis—Market Risk*.

These activities involve the use of a variety of instruments, including:

- ◆ forward contracts (which commit us to purchase or sell energy commodities in the future),
- ◆ swap agreements (which require payments to or from counterparties based upon the difference between two prices for a predetermined contractual (notional) quantity),
- ◆ option contracts (which convey the right to buy or sell a commodity, financial instrument, or index at a predetermined price), and
- ◆ futures contracts (which are exchange traded standardized commitments to purchase or sell a commodity or financial instrument, or make a cash settlement, at a specified price and future date).

Active portfolio management allows our wholesale marketing and risk management operation the ability to:

- ◆ manage and hedge its fixed-price purchase and sale commitments,
- ◆ provide fixed-price commitments to customers and suppliers,
- ◆ reduce exposure to the volatility of cash market prices, and
- ◆ hedge fuel requirements at our non-nuclear generation facilities.

Other Competitive Supply Activities

Our wholesale marketing and risk management operation participates in global coal sourcing activities by providing coal for the variable or fixed supply needs of North American and international power generators. In addition, our wholesale marketing and risk

management operation provides products and services to upstream (exploration and production) and downstream (transportation and storage) natural gas customers. We also include in our other competitive supply activities the results from our synthetic fuel processing facility in South Carolina.

Other

We hold up to a 50% voting interest in 24 operating energy projects that consist of electric generation (primarily relying on alternative fuel sources), fuel processing, or fuel handling facilities and are either qualifying facilities under the Public Utility Regulatory Policies Act of 1978 or otherwise exempt from, or not subject to, the Public Utility Holding Company Act of 1935. Each electric generating plant sells its output to a local utility under long-term contracts.

We also provide operation and maintenance services, including testing and start-up to owners of electric generating facilities.

Fuel Sources

Our power plants use diverse fuel sources. Our fuel mix based on capacity owned at December 31, 2004 and our generation based on actual output by fuel type in 2004 were as follows:

Fuel	Capacity Owned	Generation
Nuclear	30%	52%
Coal	22	32
Natural Gas	30	10
Oil	6	1
Renewable and Alternative (1)	3	4
Dual (2)	9	1

(1) Includes solar, geothermal, hydro, and biomass.

(2) Switches between natural gas and oil.

We discuss our risks associated with fuel in more detail in *Item 7. Management's Discussion and Analysis—Market Risk*.

Nuclear

The output at our nuclear facilities over the past five years (including periods prior to our acquisition of Nine Mile Point and Ginna) is presented in the following table:

	Calvert Cliffs		Nine Mile Point		Ginna	
	MWH	Capacity Factor	MWH*	Capacity Factor	MWH	Capacity Factor
	(MWH in millions)					
2004 ..	14.5	96%	12.1	89%	4.3	100%
2003 ..	13.7	93	12.2	90	3.9	90
2002 ..	12.1	82	11.7	87	3.8	89
2001 ..	13.6	92	11.6	86	4.3	100
2000 ..	13.8	83	11.2	83	3.8	88

*represents our proportionate ownership interest

The supply of fuel for nuclear generating stations includes the:

- ◆ purchase of uranium (concentrates and uranium hexafluoride),
- ◆ conversion of uranium concentrates to uranium hexafluoride,
- ◆ enrichment of uranium hexafluoride, and
- ◆ fabrication of nuclear fuel assemblies.

Uranium: We have commitments for sufficient quantities of uranium (concentrates and uranium hexafluoride) to meet 100% of our total requirements through 2006, 63% in 2007, and 35% in 2008. We experienced price increases in 2004 due to the federally designated Russian export agent terminating its contract with one of our key uranium suppliers. These increases are not expected to continue into 2005.

Conversion: We have commitments providing for the conversion of all of our uranium concentrates into uranium hexafluoride for our nuclear facilities through 2006 and 63% in 2007 and 35% in 2008.

Enrichment: We have commitments that provide 100% of our uranium enrichment requirements through 2010 and 25% of these requirements in 2011 and 2012.

Fuel Assembly

Fabrication: We have commitments for the fabrication of fuel assemblies for reloads required through 2008 for Nine Mile Point, through 2013 at Calvert Cliffs, and through 2017 for Ginna.

The nuclear fuel markets are competitive, and although prices for uranium and conversion are increasing, we do not anticipate any significant problems in meeting our future requirements.

Storage of Spent Nuclear Fuel—Federal Facilities

One of the issues associated with the operation and decommissioning of nuclear generating facilities is disposal of spent nuclear fuel. There are no facilities for the reprocessing or permanent disposal of spent nuclear fuel currently in operation in the United States, and the NRC has not licensed any such facilities. The Nuclear Waste Policy Act of 1982 (NWPA) required the federal government through the Department of Energy (DOE), to develop a repository for the disposal of spent nuclear fuel and high-level radioactive waste.

As required by the NWPA, we are a party to contracts with the DOE to provide for disposal of spent nuclear fuel from our nuclear generating plants. The NWPA and our contracts with the DOE require payments to the DOE of one tenth of one cent (one mill) per kilowatt hour on nuclear electricity generated

and sold to pay for the cost of long-term nuclear fuel storage and disposal. We continue to pay those fees into the DOE's Nuclear Waste Fund for Calvert Cliffs, Ginna, and Nine Mile Point. The NWPA and our contracts with the DOE required the DOE to begin taking possession of spent nuclear fuel generated by nuclear generating units no later than January 31, 1998.

The DOE has stated that it will not meet that obligation until 2010 at the earliest. This delay has required that we undertake additional actions to provide on-site fuel storage at Calvert Cliffs, Ginna, and Nine Mile Point, including the installation of on-site dry fuel storage capacity at Calvert Cliffs, as described in more detail below. In 2004, complaints were filed against the federal government in the United States Court of Federal Claims seeking to recover damages caused by the DOE's failure to meet its contractual obligation to begin disposing of spent nuclear fuel by January 31, 1998. These cases are currently stayed, pending litigation in other related cases.

In connection with our purchase of Ginna, all of RG&E's rights and obligations related to recovery of damages from the DOE were assigned to us. However, we have an obligation to reimburse RG&E for up to the first \$10 million of any recovered damages. We and RG&E are currently requesting to allow us to replace RG&E as the party in interest in the complaint filed against the federal government by RG&E.

Storage of Spent Nuclear Fuel—On-Site Facilities

Calvert Cliffs has a license from the NRC to operate an on-site independent spent fuel storage installation that expires in 2012. We have storage capacity at Calvert Cliffs that will accommodate spent fuel from operations through 2008. In addition, we can expand our temporary storage capacity at Calvert Cliffs to meet future requirements until approximately 2025. Currently, Nine Mile Point and Ginna do not have independent spent fuel storage capacity. Rather, Nine Mile Point's Unit 1 and Ginna have sufficient storage capacity within the plants until 2010. Nine Mile Point's Unit 2 has sufficient storage capacity within the plant until 2012. After that time, independent spent fuel storage capability may need to be developed at each site.

Cost for Decommissioning Uranium Enrichment Facilities

The Energy Policy Act of 1992 contains provisions requiring domestic nuclear utilities to contribute to a fund for decommissioning and decontaminating uranium enrichment facilities that had been operated by DOE. These contributions are generally payable over a 15-year period with escalation for inflation and are based upon the amount of uranium enriched by DOE for each utility through 1992. The 1992 Act provides that these costs are recoverable through utility service rates. BGE is solely responsible for these costs as they

relate to Calvert Cliffs. The sellers of the Nine Mile Point plant and the Long Island Power Authority are responsible for the costs relating to the Nine Mile Point plant. The seller of Ginna is responsible for the costs related to that facility.

Cost for Decommissioning

We are obligated to decommission our nuclear plants at the time these plants cease operation. Every two years, the NRC requires us to demonstrate reasonable assurance that funds will be available to decommission the sites. When BGE transferred all of its nuclear generating assets to our merchant energy business, it also transferred the trust fund established to pay for decommissioning Calvert Cliffs. At December 31, 2004, the trust fund assets were \$331.9 million.

Under the Maryland Public Service Commission's (Maryland PSC) order regarding the deregulation of electric generation, BGE ratepayers must pay a total of \$520 million, in 1993 dollars adjusted for inflation, to decommission Calvert Cliffs through fixed annual collections of approximately \$18.7 million until June 30, 2006, and thereafter in an annual amount determined by reference to specified factors. BGE is collecting this amount on behalf of Calvert Cliffs. Any costs to decommission Calvert Cliffs in excess of this \$520 million must be paid by Calvert Cliffs. If BGE ratepayers have paid more than this amount at the time of decommissioning, Calvert Cliffs must refund the excess. If the cost to decommission Calvert Cliffs is less than the amount BGE's ratepayers are obligated to pay, Calvert Cliffs may keep the difference.

The sellers of Nine Mile Point transferred a \$441.7 million decommissioning trust fund to us at the time of sale. In return, we assumed all liability for the costs to decommission Unit 1 and 82% of the costs to decommission Unit 2. We believe that this amount is adequate to cover our responsibility for decommissioning Nine Mile Point to a greenfield status (restoration of the site so that it substantially matches the natural state of the surrounding properties and the site's intended use). At December 31, 2004, the Nine Mile Point trust fund assets were \$492.2 million.

Upon the closing of the Ginna acquisition, the seller transferred \$200.8 million in decommissioning funds to us. In return, we assumed all liability for the costs to decommission the unit. We believe that this transfer will be sufficient to cover our responsibility for decommissioning Ginna to a greenfield status. At December 31, 2004, the Ginna trust fund assets were \$209.6 million.

Coal

We purchase the majority of our coal for electric generation under supply contracts with mining operators, and we acquire the remainder in the spot or forward coal markets. We believe that we will be able to

renew supply contracts as they expire or enter into contracts with other coal suppliers. Our primary coal burning facilities have the following requirements:

	Approximate Annual Coal Requirement (tons)	Special Coal Restrictions
Brandon Shores Units 1 and 2 (combined) ...	3,500,000	Sulfur content less than 1.20 lbs per mmbTU
C. P. Crane Units 1 and 2 (combined) ...	850,000	Low ash melting temperature
H. A. Wagner Units 2 and 3 (combined) ...	1,100,000	Sulfur content no more than 1%

Coal deliveries to these facilities are made by rail and barge. The primary source of coal we use is produced from mines located in central and northern Appalachia. The timely delivery of coal together with the maintenance of appropriate levels of inventory is necessary to allow for continued, reliable generation from these facilities.

During 2003, we expanded our coal sources including restructuring our rail contracts, increasing the range of coals we can consume, adding synthetic fuel as an alternate source, and finding potential other coal supply sources including shipments from Columbia, Venezuela, South Africa, and other international sources.

All of the Conemaugh and Keystone plants' annual coal requirements are purchased by the plant operators from regional suppliers on the open market. The sulfur restrictions on coal are approximately 2.3% for the Keystone plant and approximately 5.3% for the Conemaugh plant.

The annual coal requirements for the ACE, Jasmin, and Poso plants, which are located in California, are supplied under contracts with mining operators. The Jasmin and Poso plants are restricted to coal with sulfur content less than 4.0% and ACE is restricted to less than 2.0%.

All of our requirements reflect historical levels. The actual fuel quantities required can vary substantially from historical levels depending upon the relationship between energy prices and fuel costs, weather conditions, and operating requirements.

Gas

We purchase natural gas, storage capacity, and transportation, as necessary, for electric generation at certain plants. Some of our gas-fired units can use residual fuel oil or distillates instead of gas. Gas is purchased under contracts with suppliers on the spot market and forward markets, including financial exchanges and bilateral agreements. The actual fuel quantities required can vary substantially from year to year depending upon the relationship between energy

prices and fuel costs, weather conditions, and operating requirements. However, we believe that we will be able to obtain adequate quantities of gas to meet our requirements.

Oil

Under normal burn practices, our requirements for residual fuel oil (No. 6) amount to approximately 1.5 million to 2.0 million barrels of low-sulfur oil per year. Deliveries of residual fuel oil are made from the suppliers' Baltimore Harbor marine terminal for distribution to the various generating plant locations. Also, based on normal burn practices, we require approximately 5.0 million to 6.0 million gallons of distillates (No. 2 oil and kerosene) annually, but these requirements can vary substantially from year to year depending upon the relationship between energy prices and fuel costs, weather conditions, and operating requirements. Distillates are purchased from the suppliers' Baltimore truck terminals for distribution to the various generating plant locations. We have contracts with various suppliers to purchase oil at spot prices, and for future delivery, to meet our requirements.

Competition

Market developments over the past several years have changed the nature of competition in the merchant energy business. Certain companies within the merchant energy sector have curtailed their activities or withdrawn completely from the business. However, new competitors (e.g., financial investors) are entering the market. We encounter competition from companies of various sizes, having varying levels of experience, financial and human resources, and differing strategies.

We face competition in the market for energy, capacity, and ancillary services. In our merchant energy business, we compete with international, national, and regional full service energy providers, merchants, and producers to obtain competitively priced supplies from a variety of sources and locations, and to utilize efficient transmission or transportation. We principally compete on the basis of price, customer service, reliability, and availability of our products.

With respect to power generation, we compete in the operation of energy-producing projects, and our competitors in this business are both domestic and international organizations, including various utilities, industrial companies and independent power producers (including affiliates of utilities), some of which have financial resources that are greater than ours.

Difficulties in making competitive assessments of our company arise from states considering different types of regulatory initiatives concerning competition in the power industry. Increased competition that resulted from some of these initiatives in several states contributed in some instances to a reduction in electricity prices and put pressure on electric utilities to lower their costs, including the cost of purchased electricity. While many states continue their support for retail competition and industry restructuring, other states that were considering deregulation have slowed their plans or postponed consideration of deregulation. In addition, other states are reconsidering deregulation.

We believe there is adequate growth potential in the current deregulated market and that further market changes could provide additional opportunities for our merchant energy business. Our wholesale marketing and risk management operation also participates in global coal sourcing activities by providing coal for the variable or fixed supply needs of North American and international power generators. In addition, our wholesale marketing and risk management operation provides products and services to upstream and downstream natural gas customers.

As the economy continues to recover and the market for commercial and industrial supply continues to grow, we have experienced increased competition in our retail commercial and industrial supply activities. The increase in retail competition and the impact of wholesale power prices compared to the rates charged by local utilities may affect the margins that we will realize from our customers. However, we believe that our experience and expertise in assessing and managing risk will help us to remain competitive during volatile or otherwise adverse market circumstances.

Merchant Energy Operating Statistics

	2004	2003	2002	2001	2000

Operating statistics do not reflect the elimination of intercompany transactions.

Certain prior-year amounts have been reclassified to conform with the current year's presentation.

Baltimore Gas and Electric Company

BGE is an electric transmission and distribution utility company and a gas distribution utility company with a service territory that covers the City of Baltimore and all or part of ten counties in central Maryland. BGE is regulated by the Maryland PSC and Federal Energy Regulatory Commission (FERC) with respect to rates and other aspects of its business.

BGE's electric service territory includes an area of approximately 2,300 square miles. There are no municipal or cooperative wholesale customers within BGE's service territory. BGE's gas service territory includes an area of approximately 800 square miles.

BGE's electric and gas revenues come from many customers—residential, commercial, and industrial. In 2004, BGE's largest electric customer provided approximately two percent of BGE's total electric revenues and BGE's largest gas customer provided approximately one percent of BGE's total gas revenues.

Electric Business

Electric Regulatory Matters and Competition

Deregulation

Effective July 1, 2000, electric customer choice and competition among electric suppliers was implemented in Maryland. As a result of the deregulation of electric generation, the following occurred:

- ◆ All customers can choose their electric energy supplier.
- ◆ BGE provided fixed-price standard offer service for commercial and industrial customers through either June 30, 2002 or June 30, 2004, depending on customer type. For the commercial and industrial customers that did not select an alternative supplier after those time periods, BGE provided a market-based standard offer service. Base rates for commercial and industrial customers were frozen until June 30, 2004.

- ◆ Commercial and industrial customers have several service options that fix competitive transition charges (CTC) through June 30, 2006. CTC revenues were provided to allow BGE to recover stranded costs that resulted from the deregulation of BGE's generating assets.
- ◆ BGE residential base rates for delivery service will not change before July 2006. While total residential base rates remain unchanged over the initial transition period (July 1, 2000 through June 30, 2006), annual standard offer service rate increases are offset by corresponding decreases in the CTC that BGE receives from its customers.
- ◆ While BGE does not sell electric commodity to all customers in its service territory, BGE continues to deliver electricity to all customers and provides meter reading, billing, emergency response, regular maintenance, and balancing services.
- ◆ BGE transferred, at book value, its generating assets and related liabilities to the merchant energy business. At December 31, 2004, BGE remains contingently liable for the \$269.8 million outstanding balance for liabilities transferred to the merchant energy business.

Standard Offer Service

BGE provides fixed-price standard offer service for residential customers that do not select an alternative supplier through June 30, 2006. Beginning July 1, 2006, BGE's current obligation to provide fixed-price standard offer service to residential customers ends, and all residential customers that receive their electric supply from BGE will be charged market-based standard offer service rates, as discussed in the *Standard Offer Service—Provider of Last Resort (POLR)* section.

BGE provided fixed-price standard offer service for most of its large commercial and industrial customers through June 30, 2002. The large commercial and industrial customers that did not select an alternative supplier were provided market-based standard offer service through June 30, 2004. BGE provided fixed-price standard offer service to its remaining commercial and industrial customers through June 30, 2004. Beginning July 1, 2004, all commercial and industrial customers that receive their electric supply from BGE are charged market-based standard offer service rates, as discussed in the *Standard Offer Service—Provider of Last Resort (POLR)* section.

Standard Offer Service—Provider of Last Resort (POLR)
BGE is obligated to provide market-based standard offer service to residential customers from July 1, 2006 through May 31, 2010, and for commercial and industrial customers for one, two, or four-year periods beyond June 30, 2004, depending on customer load. The POLR rates charged during these time periods will recover BGE's wholesale power supply costs and include an administrative fee. The administrative fee includes a shareholder return component and an incremental cost component.

Bidding to supply BGE's standard offer service to commercial and industrial customers for one, two, or four-year periods beyond June 30, 2004, and to residential customers beyond June 30, 2006, will occur from time to time through a competitive bidding process approved by the Maryland PSC. Successful bidders, which may include affiliates of Constellation Energy, will execute contracts with BGE for varying terms depending on the load being served under the contract.

We discuss the market risk of our regulated electric business in more detail in *Item 7. Management's Discussion and Analysis—Market Risk* section.

Electric Load Management

BGE has implemented various programs for use when system-operating conditions or market economics indicate that a reduction in load would be beneficial. We refer to these programs as active load management programs. These programs include:

- ◆ two options for commercial and industrial customers to voluntarily reduce their electric loads,
- ◆ air conditioning control for residential and commercial customers, and
- ◆ residential water heater control.

These programs generally take effect on summer days when demand and/or wholesale prices are relatively high. These programs had the capability during the 2004 summer to reduce load up to approximately 220 MW.

Transmission and Distribution Facilities

BGE maintains approximately 250 substations and 1,300 circuit miles of transmission lines throughout central Maryland. BGE also maintains nearly 22,900 circuit miles of distribution lines. The transmission facilities are connected to those of neighboring utility systems as part of the PJM Interconnection. Under the PJM Tariff and various agreements, BGE and other market participants can use regional transmission facilities for energy, capacity, and ancillary services transactions including emergency assistance.

We discuss various FERC initiatives relating to wholesale electric markets in more detail in *Item 7. Management's Discussion and Analysis—Federal Regulation* section.

(A) Primarily includes transmission service integration revenues, late payment charges, miscellaneous service fees, and tower leasing revenues.

Operating statistics do not reflect the elimination of intercompany transactions.

"Delivery service only" refers to BGE's delivery of commodity to customers that was purchased by the customer from an alternate supplier.

Gas Business

The wholesale price of natural gas as a commodity is not subject to regulation. All BGE gas customers have the option to purchase gas from alternative suppliers, including subsidiaries of Constellation Energy. BGE continues to deliver gas to all customers within its service territory. This delivery service is regulated by the Maryland PSC.

BGE also provides customers with meter reading, billing, emergency response, regular maintenance, and balancing services.

Approximately 50% of the gas delivered on BGE's distribution system is for customers that purchase gas from alternative suppliers. These customers are charged fees to recover the costs BGE incurs to deliver the customers' gas through our distribution system.

For customers that buy their gas from BGE, there is a market-based rates incentive mechanism. Under market-based rates, our actual cost of gas is compared to a market index (a measure of the market price of gas in a given period). The difference between our actual cost and the market index is shared equally between shareholders and customers. BGE must secure fixed-price contracts for at least 10%, but not more than 20%, of forecasted system supply requirements for the November through March period.

BGE purchases the natural gas it resells to customers directly from many producers and marketers. BGE has transportation and storage agreements that expire from 2005 to 2023.

BGE's current pipeline firm transportation entitlements to serve BGE's firm loads are 334,053 dekatherms (DTH) per day during the winter period and 309,053 DTH per day during the summer period.

BGE's current maximum storage entitlements are 235,080 DTH per day. To supplement its gas supply at times of heavy winter demands and to be available in temporary emergencies affecting gas supply, BGE has:

- ◆ a liquefied natural gas facility for the liquefaction and storage of natural gas with a total storage capacity of 1,092,977 DTH and a daily capacity of 311,500 DTH, and
- ◆ a propane air facility with a mined cavern with a total storage capacity equivalent to 564,200 DTH and a daily capacity of 85,000 DTH.

BGE has under contract sufficient volumes of propane for the operation of the propane air facility and is capable of liquefying sufficient volumes of natural gas

during the summer months for operations of its liquefied natural gas facility during peak winter periods.

BGE historically has been able to arrange short-term contracts or exchange agreements with other gas companies in the event of short-term disruptions to gas supplies or to meet additional demand.

BGE also participates in the interstate markets by releasing pipeline capacity or bundling pipeline capacity with gas for off-system sales. Off-system gas sales are low-margin direct sales of gas to wholesale suppliers of natural gas outside BGE's service territory. Earnings from these activities are shared between shareholders and customers. BGE makes these sales as part of a program to balance our supply of, and cost of, natural gas.

"Delivery service only" refers to BGE's delivery of commodity to customers that was purchased by the customer from an alternate supplier.

Franchises

BGE has nonexclusive electric and gas franchises to use streets and other highways that are adequate and

sufficient to permit them to engage in their present business. Conditions of the franchises are satisfactory.

Other Nonregulated Businesses

Energy Projects and Services

We offer energy projects and services designed primarily to provide energy solutions to large commercial and industrial and governmental customers. These energy products and services include:

- ◆ designing, constructing, and operating heating, cooling, and cogeneration facilities,
- ◆ energy consulting and power-quality services,
- ◆ services to enhance the reliability of individual electric supply systems, and
- ◆ customized financing alternatives.

Home Products and Gas Retail Marketing

We offer services to customers in Maryland including:

- ◆ home improvements,
- ◆ the service of heating, air conditioning, plumbing, electrical, and indoor air quality systems, and
- ◆ the sale of natural gas to residential customers.

Other

Our other nonregulated businesses include investments that we do not consider to be core operations. These include financial investments, real estate projects, and interests in a Panamanian distribution facility and in a fund that holds interests in two South American energy projects. While our intent is to dispose of these assets, market conditions and other events beyond our control may affect the actual sale of these assets. In addition, a future decline in the fair value of these assets could result in losses. We discuss these non-core assets in more detail in *Item 7. Management's Discussion and Analysis—Results of Operations* section.

Consolidated Capital Requirements

Our total capital requirements for 2004 were \$762 million. Of this amount, \$497 million was used in our nonregulated businesses and \$265 million was used in our regulated business. We estimate our total capital requirements will be \$915 million in 2005.

We continuously review and change our capital expenditure programs, so actual expenditures may vary from the estimate above. We discuss our capital requirements further in *Item 7. Management's Discussion and Analysis—Capital Resources* section.

Environmental Matters

The development (involving site selection, environmental assessments, and permitting), construction, acquisition, and operation of electric generating and distribution facilities are subject to extensive federal, state, and local environmental and land use laws and regulations. From the beginning phases of development to the ongoing operation of existing or new electric generating and distribution facilities, our activities involve compliance with diverse laws and regulations that address emissions and impacts to air and water, protection of natural and cultural resources, and chemical and waste handling and disposal.

We continuously monitor federal, state, and local environmental initiatives to determine potential impacts on our financial results. As new laws or regulations are promulgated, we assess their applicability and implement the necessary modifications to our facilities or their operation to maintain on-going compliance. Our capital expenditures were approximately \$235 million during the five-year period 2000-2004 to comply with existing environmental standards and

regulations. Our estimated environmental capital requirements for the next three years are approximately \$5 million in 2005, \$45 million in 2006, and \$80 million in 2007.

Air Quality

The Clean Air Act created the basic framework for the federal and state regulation of air pollution. The cornerstone of the Act is the requirement that National Ambient Air Quality Standards be established to protect public health and public welfare. In addition, the Act also includes technology-driven emission requirements. Many of these provisions could materially affect our facilities and are described in more detail below.

National Ambient Air Quality Standards (NAAQS)

The NAAQS are federal air quality standards that establish maximum ambient air concentrations for the following specific pollutants: ozone (smog), carbon monoxide, lead, particulates, sulfur dioxides (SO₂), and nitrogen dioxides (NO_x). Our generating facilities are primarily affected by ozone and particulates standards. Ozone is formed when sunlight interacts with emissions

of nitrogen oxides (NOx) and volatile organic compounds (such as from motor vehicle exhaust). Our generating facilities are subject to various permits and programs meant to achieve or preserve attainment of the standards for all these pollutants.

In order for states to achieve compliance with the NAAQS, federal and/or state legislation or regulation is likely to be adopted that will require additional emission reductions from our facilities. The Environmental Protection Agency (EPA) has proposed the Clean Air Interstate Rule (CAIR) to further reduce SO₂ and NOx emissions by addressing the interstate transport of SO₂ and NOx emissions from fossil fuel-fired plants located primarily in the Eastern United States. In addition to CAIR, the Bush Administration is proposing a legislative approach (Clear Skies) which would require similar reductions in emissions of SO₂ and NOx. Depending on the timing and requirements of any federal proposal, one or more states in which we operate may impose more stringent or earlier emission reduction requirements. We favor the Clear Skies approach to achieve future emission reductions as the fairest and most expeditious manner in which to meet the NAAQS.

As a result of these regulatory and legislative proposals, along with new rules to impose limits on hazardous substances, we expect more stringent air emission standards to be adopted. If new requirements are promulgated as expected we will install additional air emission control equipment at our coal-fired generating facilities in Maryland and at our co-owned coal-fired facilities in Pennsylvania to meet air quality standards. We include in our estimated environmental capital requirements capital spending for these projects, which we expect will be approximately \$2 million in 2005, \$32 million in 2006, and \$75 million in 2007. If these rules are promulgated as we have assumed in our projections, we will spend another \$400-\$500 million of capital from 2008-2010. Our estimates are subject to significant uncertainties including the timing of any regulatory or legislative change, its implementation timetable, and the amount of emissions reductions that will be required. As a result, we cannot predict our capital spending or the scope or timing of these projects with certainty, and the actual expenditures, scope and timing could differ significantly from our estimates.

On March 10, 2005, the EPA adopted CAIR. We are in the process of evaluating the impact of the rules on our financial results.

We own several generating facilities in Maryland and California, states that do not meet the NAAQS for ozone. The Clean Air Act requires states to assess fees against every major stationary source of NOx and volatile organic compounds in areas that have not met the NAAQS for ozone if the NAAQS is not achieved by a specified deadline. If implemented, the fees would be assessed based on the magnitude of a source's

emissions as compared to its emissions when the area failed to meet the deadline. The exact method of computing these fees has not been established and will depend in part on state implementation regulations that have not been finalized.

There are various deadlines for Maryland and California to meet the NAAQS for ozone with the earliest being November 2005. Assessment of fees would commence in 2006 if the current effective dates are maintained. However, there is significant uncertainty regarding the date when fees would be assessed and whether they would be applicable to our facilities because the EPA is involved in litigation regarding these issues. Consequently, we are unable to estimate the ultimate applicability, timing or financial impact of the fees in light of the uncertainty surrounding the effective dates and the methodology that will be used in calculating the fees.

Hazardous Air Emissions

The Clean Air Act requires the EPA to evaluate the public health impacts of hazardous air emissions from electric steam generating facilities. In December 2003, the EPA proposed to regulate the emissions of mercury from coal-fired facilities and nickel from residual oil-fired facilities. Under the mercury proposal, the EPA has proposed compliance alternatives, including a unit specific standard and a cap and trade program. As proposed, compliance with the unit specific limits would be required as early as March 2008, but could be delayed for at least one year as allowed under the proposed requirements. Compliance with the mercury cap and trade program would be required by January 2010. The Bush Administration's Clear Skies legislative proposal also addresses regulation of mercury through a cap and trade approach. The nickel emission limits for residual oil-fired facilities would require compliance by March 2008 but could be delayed for at least one year as allowed under the proposed requirements. We believe final regulations could be issued in 2005 and could affect all coal and oil-fired boilers at our generating facilities. The cost of compliance with the final regulations could be material.

New Source Review

The EPA and several states filed lawsuits against a number of coal-fired power plants primarily in Mid-Western and Southern states alleging violations of the Prevention of Significant Deterioration and Non-Attainment provisions of the Clean Air Act's new source review requirements. The EPA requested information relating to modifications made to our Brandon Shores, Crane, and Wagner plants located in Maryland. The EPA also sent similar, but narrower, information requests to two of our newer Pennsylvania waste-coal burning plants in which we have an ownership interest. We have responded to the EPA, and

as of the date of this report the EPA has taken no further action.

Based on the level of emissions control that the EPA and states are seeking in these new source review enforcement actions, we believe that material additional costs and penalties could be incurred, and planned capital expenditures could be accelerated, if the EPA was successful in any future actions regarding our facilities.

In August 2003, the EPA's equipment replacement rule was promulgated. The rule establishes an equipment replacement cost threshold for determining when major new source review requirements are triggered. The rule provides that plant owners may spend up to 20% of the replacement value of a generation unit on certain component replacements each year without triggering requirements for new pollution controls. A legal challenge to this rule was filed with the United States Court of Appeals and a stay was issued which delayed its effective date. The EPA has also determined to seek additional comment on certain features of the rule, including the 20% threshold. We cannot predict the timing or outcome of the legal challenge or the EPA comment process, or their possible effect on our financial results.

Global Climate Change

Future initiatives regarding greenhouse gas emissions and global warming continue to be the subject of much debate. As a result of our diverse fuel portfolio, our contribution to greenhouse gases varies by plant type. Fossil fuel-fired power plants are significant sources of carbon dioxide emissions, a principal greenhouse gas. Our compliance costs with any mandated federal greenhouse gas reductions in the future could be material.

Water Quality

The Clean Water Act established the basic framework for federal and state regulation of water pollution control. The Act requires facilities that discharge waste or storm water into the waters of the United States to obtain permits requiring them to meet effluent limits in order to achieve ambient water quality standards in the receiving waters. Under current provisions of the Clean Water Act, existing discharge permits are renewed every five years, at which time permit effluent limits come under extensive review and can be modified to account for more stringent regulations. In addition, the permits can be modified at any time.

Water Intake Regulations

In July 2004, the EPA published final rules under the Clean Water Act that require cooling water intake structures to reflect the best technology available for minimizing adverse environmental impacts. The final rules require the installation of additional intake screens

or other protective measures, as well as extensive site-specific study and monitoring requirements. We currently have six facilities affected by the regulation. The rule allows for a number of compliance options that will be assessed through 2007, following which we will determine whether any action is required and what our most viable options are if any action is required. Until we determine our most viable option under the final rules, we cannot estimate our compliance costs. However, the costs associated with the final rules could be material.

Hazardous and Solid Waste

The Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) established the basic framework for federal and state regulations that can require any individual or entity that may have owned or operated a disposal site, as well as transporters or generators of hazardous substances sent to such site, to share in remediation costs. Except to the extent discussed in *Note 12 to the Consolidated Financial Statements*, compliance with CERCLA requirements is not expected to have a material adverse effect on our financial results.

The Resource Conservation and Recovery Act (RCRA) gives the EPA authority to control hazardous waste from "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also sets forth a framework for the management of non-hazardous wastes. Although RCRA focuses only on active and future facilities and, unlike CERCLA, does not address abandoned or historical sites, there are provisions that require phasing-out land disposal of hazardous waste, more stringent hazardous waste management standards, and a comprehensive underground storage tank program.

Our coal-fired generating facilities produce approximately two million tons of combustion by-products ("ash") each year, including approximately 700,000 tons at our Maryland plants. Of the two million tons, approximately half is beneficially re-used in various projects, including as structural fill in surface mine reclamation, and half is placed in landfills. In 2000, the EPA decided not to regulate combustion ash as a hazardous waste under RCRA. Instead, the EPA announced its intention to develop national standards, currently scheduled to be proposed in April 2006, to regulate this material as a non-hazardous waste, and is developing regulations governing the placement of ash in landfills, surface impoundments, and sand/gravel surface mines. The EPA is also developing regulations for ash placement in coal mines, which are expected to be proposed in October 2007. Federal regulation has the potential to result in additional requirements such as groundwater monitoring, liners, and leachate

collection and treatment systems for all landfills, surface impoundments, and sand and gravel mines used for ash management. Depending on the scope of any final requirements, our compliance costs could be material.

As a result of these regulatory proposals, the remaining ash placement capacity at our current mine reclamation site and our current ash generation projections, we are exploring our options for the placement of ash, including construction of an ash placement facility. Over the next five years, we estimate that our capital expenditures for this project will be as follows: approximately \$10 million in 2006 and, if we decide to construct a facility, approximately \$55 million in 2008 towards the purchase of land. Our estimates are subject to significant uncertainties including the timing of any regulatory change, its implementation timetable,

and the scope of the final requirements. As a result, we cannot predict our capital spending or the scope and timing of this project with certainty, and the actual expenditures, scope and timing could differ significantly from our estimates.

Employees

Constellation Energy and its subsidiaries had approximately 9,570 employees at December 31, 2004. At the Nine Mile Point plant, approximately 700 employees are represented by the International Brotherhood of Electrical Workers, Local 97. The labor contract with this union expires in June 2006. We believe that our relationship with this union is satisfactory, but there can be no assurances that this will continue to be the case.

Item 2. Properties

Constellation Energy's corporate offices occupy approximately 106,000 square feet of leased office space in Baltimore, Maryland. The corporate offices for most of our merchant energy business occupy approximately 172,000 square feet of leased office space in another building in Baltimore, Maryland. We describe our electric generation properties on the next page. We also have leases for other offices and services located in the Baltimore metropolitan region, and for various real property and facilities relating to our generation projects.

BGE's principal headquarters building is located in downtown Baltimore. In January 2004, BGE sold a portion of its headquarters building and is in the process of consolidating its operations into the remainder of the building. In addition, BGE owns propane air and liquefied natural gas facilities as discussed in *Item 1. Business—Gas Business* section.

BGE also has rights-of-way to maintain 26-inch natural gas mains across certain Baltimore City-owned property (principally parks) which expired in 2004. BGE is in the process of renewing the rights-of-way with Baltimore City for an additional 25 years. The

expiration of the rights-of-way does not affect BGE's ability to use the rights-of-way during the renewal process.

BGE has electric transmission and electric and gas distribution lines located:

- ◆ in public streets and highways pursuant to franchises, and
- ◆ on rights-of-way secured for the most part by grants from owners of the property.

All of BGE's property is subject to the lien of BGE's mortgage securing its mortgage bonds. All of the generation facilities transferred to affiliates by BGE on July 1, 2000, along with the stock we own in certain of our subsidiaries, are subject to the lien of BGE's mortgage.

We believe we have satisfactory title to our power project facilities in accordance with standards generally accepted in the energy industry, subject to exceptions, which in our opinion, would not have a material adverse effect on the use or value of the facilities.

We also lease office space throughout North America, in the United Kingdom, and in Australia to support our merchant energy business.

The following table describes our generating facilities:

Plant	Location	Installed Capacity (MW)	% Owned	Capacity Owned (MW)	Primary Fuel
(at December 31, 2004)

Executive Officers of the Registrant

<u>Name</u>	<u>Age</u>	<u>Present Office</u>	<u>Other Offices or Positions Held During Past Five Years</u>
Mayo A. Shattuck III	50	Chairman of the Board of Constellation Energy (since July 2002), President and Chief Executive Officer of Constellation Energy (since November 2001); and Chairman of the Board of BGE (since July 2002)	Global Head of Investment Banking and Global Head of Private Banking—Deutsche Banc Alex. Brown; and Vice Chairman—Bankers Trust Corporation.
E. Follin Smith	45	Executive Vice President (since January 2004) and Chief Financial Officer (since June 2001) and Chief Administrative Officer (since December 2003) of Constellation Energy and Senior Vice President and Chief Financial Officer of Baltimore Gas and Electric Company (since January 2002)	Senior Vice President—Constellation Energy; Senior Vice President and Chief Financial Officer—Armstrong Holdings, Inc.; Vice President and Treasurer—Armstrong Holdings, Inc. (filed for bankruptcy under Chapter 11 on December 6, 2000); and Chief Financial Officer—General Motors—Delphi Chassis Systems.
Thomas V. Brooks	42	President of Constellation Energy Commodities Group, Inc. (formerly Constellation Power Source, Inc.) (since October 2001); Executive Vice President of Constellation Energy (since January 2004)	Vice President of Business Development and Strategy—Constellation Energy; and Vice President—Goldman Sachs.
Michael J. Wallace	57	President of Constellation Generation Group, LLC (since January 2002); Executive Vice President of Constellation Energy (since January 2004)	Managing Director and Member—Barrington Energy Partners; and Senior Vice President—Commonwealth Edison.
Thomas F. Brady	55	Executive Vice President, Corporate Strategy and Retail Competitive Supply of Constellation Energy (since January 2004)	Senior Vice President, Corporate Strategy and Development—Constellation Energy; Vice President, Corporate Strategy and Development—Constellation Energy; and Vice President, Corporate Strategy and Development—BGE.

<u>Name</u>	<u>Age</u>	<u>Present Office</u>	<u>Other Offices or Positions Held During Past Five Years</u>
Kenneth W. DeFontes, Jr.	54	President and Chief Executive Officer of Baltimore Gas and Electric Company and Senior Vice President of Constellation Energy (since October 2004)	Vice President, Electric Transmission and Distribution—BGE; and Manager, Corporate Strategy and Development—Constellation Energy.
Paul J. Allen	53	Senior Vice President, Corporate Affairs of Constellation Energy (since January 2004)	Vice President, Corporate Affairs—Constellation Energy; and Senior Vice President and Group Head—Ogilvy Public Relations.
John R. Collins	47	Senior Vice President (since January 2004) and Chief Risk Officer of Constellation Energy (since December 2001)	Vice President—Constellation Energy; Managing Director—Finance—Constellation Power Source Holdings, Inc.; and Senior Financial Officer—Constellation Power Source, Inc.
Beth S. Perlman	44	Senior Vice President (since January 2004) and Chief Information Officer of Constellation Energy (since April 2002)	Vice President, Technology—Enron Corporation.
Marc L. Ugol	46	Senior Vice President, Human Resources of Constellation Energy (since January 2004)	Vice President, Human Resources—Constellation Energy; Senior Vice President, Human Resources and Administration—Tellabs, Inc.; and Senior Vice President, Human Resources—Platinum Technology International.

Officers are elected by, and hold office at the will of, the Board of Directors and do not serve a “term of office” as such. There is no arrangement or understanding between any director or officer and any other person pursuant to which the director or officer was selected.

PART II

Item 5. Market for Registrant's Common Equity and Related Shareholder Matters

Stock Trading

Constellation Energy's common stock is traded under the ticker symbol CEG. It is listed on the New York, Chicago, and Pacific stock exchanges. It has unlisted trading privileges on the Boston, Cincinnati, and Philadelphia exchanges.

As of February 28, 2005, there were 45,843 common shareholders of record.

Dividend Policy

Constellation Energy pays dividends on its common stock after its Board of Directors declares them. There are no contractual limitations on Constellation Energy paying common stock dividends.

Dividends have been paid continuously since 1910 on the common stock of Constellation Energy, BGE, and their predecessors. Future dividends depend upon future earnings, our financial condition, and other factors.

In January 2005, we announced an increase in our quarterly dividend from \$0.285 to \$0.335 per share on our common stock payable April 1, 2005 to holders of record on March 10, 2005. This is equivalent to an annual rate of \$1.34 per share.

Quarterly dividends were declared on our common stock during 2004 and 2003 in the amounts set forth below.

BGE pays dividends on its common stock after its Board of Directors declares them. There are no contractual limitations on BGE paying common stock dividends unless:

- ◆ BGE elects to defer interest payments on the 6.20% Deferrable Interest Subordinated Debentures due 2043, and any deferred interest remains unpaid; or
- ◆ any dividends (and any redemption payments) due on BGE's preference stock have not been paid.

Common Stock Dividends and Price Ranges

	2004			2003		
	Dividend Declared	Price*		Dividend Declared	Price*	
		High	Low		High	Low
First Quarter	\$0.285	\$41.47	\$38.52	\$0.260	\$30.23	\$25.17
Second Quarter	0.285	41.35	35.89	0.260	34.92	27.50
Third Quarter	0.285	41.18	36.76	0.260	37.65	31.75
Fourth Quarter	0.285	44.90	39.90	0.260	39.61	35.03
Total	<u>\$1.140</u>			<u>\$1.040</u>		

* Based on New York Stock Exchange Composite Transactions.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Introduction and Overview

Constellation Energy Group, Inc. (Constellation Energy) is a North American energy company that conducts its business through various subsidiaries including a merchant energy business and Baltimore Gas and Electric Company (BGE). We describe our operating segments in *Note 3*.

This report is a combined report of Constellation Energy and BGE. References in this report to "we" and "our" are to Constellation Energy and its subsidiaries, collectively. References in this report to the "regulated business(es)" are to BGE. We discuss our business in more detail in *Item 1. Business* section.

In this discussion and analysis, we will explain the general financial condition and the results of operations for Constellation Energy and BGE including:

- ◆ factors which affect our businesses,
- ◆ our earnings and costs in the periods presented,
- ◆ changes in earnings and costs between periods,
- ◆ sources of earnings,
- ◆ impact of these factors on our overall financial condition,
- ◆ expected future expenditures for capital projects, and
- ◆ expected sources of cash for future capital expenditures.

As you read this discussion and analysis, refer to our Consolidated Statements of Income, which present the results of our operations for 2004, 2003, and 2002. Our results reflect a significant increase in revenues and in purchased fuel and energy expenses mainly due to the implementation of Emerging Issues Task Force Issue (EITF) 02-3, *Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities* in January 2003, as well as the full year impact of our 2002 acquisitions. We discuss our acquisitions in more detail in *Note 15*. We analyze and explain the differences between periods in the specific line items of our Consolidated Statements of Income.

We have organized our discussion and analysis as follows:

- ◆ First, we discuss our strategy.
- ◆ We then describe the business environment in which we operate including how regulation, weather, and other factors affect our business.
- ◆ Next, we discuss our critical accounting policies. These are the accounting policies that are most important to both the portrayal of our financial condition and results of operations and require management's most difficult, subjective or complex judgment.
- ◆ We highlight significant events that are important to understanding our results of operations and financial condition.
- ◆ We then review our results of operations beginning with an overview of our total company results, followed by a more detailed review of those results by operating segment.
- ◆ We review our financial condition addressing our sources and uses of cash, security ratings, capital resources, capital requirements, commitments, and off-balance sheet arrangements.
- ◆ We conclude with a discussion of our exposure to various market risks.

Strategy

We are pursuing a strategy of distributing energy and energy related services through our competitive supply activities and BGE, our regulated utility located in Maryland. Our merchant energy business focuses on short-term and long-term, high-value sales of energy, capacity, and related products to various customers, including distribution utilities, municipalities, cooperatives, industrial customers, and commercial customers primarily in the regional markets in which end-use customer electricity and gas rates have been deregulated and thereby separated from the cost of generation and gas supply. These markets include:

- ◆ the Northeast (New England and New York),
- ◆ the Mid-Atlantic and Midwest regions,
- ◆ the West region (Texas and California), and
- ◆ certain areas in Canada.

We obtain this energy through both owned and contracted supply resources. Our generation fleet is strategically located in deregulated markets across the country and is diversified by fuel type, including nuclear, coal, gas, oil, and renewable sources. Where we do not own generation, we contract for power from other merchant providers, typically through power purchase agreements. We intend to remain diversified between regulated transmission and distribution and competitive supply. We will use both our owned generation and our contracted generation to support our competitive supply operations.

We are a leading national competitive supplier of energy in the deregulated markets previously discussed. In our wholesale and commercial and industrial retail marketing activities we are leveraging our recognized expertise in providing full requirements energy and energy related services to enter markets, capture market share, and organically grow these businesses. Through the application of technology, intellectual capital, process improvement, and increased scale, we are seeking to reduce the cost of delivering full requirements energy and energy related services and managing risk.

We are also responding proactively to customer needs by expanding the variety of products we offer. Our wholesale competitive supply activities include a growing customer products operation that markets physical energy products and risk management and logistics services to generators, distributors, producers of coal, natural gas and fuel oil, and other consumers.

Within our retail competitive supply activities, we are marketing a broader array of products and expanding our markets. Over time, we may consider integrating the sale of electricity and natural gas to provide one energy procurement solution for our customers.

Collectively, the integration of owned and contracted electric generation assets with origination, fuel procurement, and risk management expertise, allows our merchant energy business to earn incremental margin and more effectively manage energy and commodity price risk over geographic regions and over time. Our focus is on providing solutions to customers' energy needs, and our wholesale marketing and risk management operation adds value to our owned and contracted generation assets by providing national market access, market infrastructure, real-time market intelligence, risk management and arbitrage opportunities, and transmission and transportation expertise. Generation capacity supports our wholesale marketing and risk management operation by providing a source of reliable power supply that provides a physical hedge for some of our load-serving activities.

To achieve our strategic objectives, we expect to continue to pursue opportunities that expand our access to customers and to support our wholesale marketing and risk management operation with generation assets that have diversified geographic, fuel, and dispatch characteristics. We also expect to grow organically through selling a greater number of physical energy products and services to large energy customers. We expect to achieve operating efficiencies within our competitive supply operation and our generation fleet by selling more products through our existing sales force, benefiting from efficiencies of scale, adding to the capacity of existing plants, and making our business processes more efficient.

We expect BGE and our other retail energy service businesses to grow through focused and disciplined expansion primarily from new customers. At BGE, we are also focused on enhancing reliability and customer satisfaction.

Customer choice, regulatory change, and energy market conditions significantly impact our business. In response, we regularly evaluate our strategies with these goals in mind: to improve our competitive position, to anticipate and adapt to the business environment and regulatory changes, and to maintain a strong balance sheet and investment-grade credit quality.

We are constantly reevaluating our strategies and might consider:

- ◆ acquiring or developing additional generating facilities to support our merchant energy business,
- ◆ mergers or acquisitions of utility or non-utility businesses or assets, and
- ◆ sale of assets or one or more businesses.

Business Environment

General Industry

Over the past several years, the utility industry and energy markets experienced significant changes as a result of less liquid and more volatile wholesale markets, credit quality deterioration of various industry participants, and the slowing of the U.S. economy.

The energy markets also were affected by other significant events, including expanded investigations by state and federal authorities into business practices of energy companies in the deregulated power and gas markets relating to "wash trading" to inflate revenues and volumes, and other trading practices designed to manipulate market prices. In addition, several merchant energy businesses significantly reduced their energy trading activities due to deteriorating credit quality.

Over the last few years, the energy markets have been highly volatile with significant changes in natural gas and power prices, as well as the continuation of reduced liquidity in the marketplace. We continue to actively manage our credit portfolio to attempt to reduce the impact of a potential counterparty default. We discuss our customer (counterparty) credit and other risks in more detail in the *Market Risk* section.

We also continue to examine plans to achieve our strategies and to further strengthen our balance sheet and enhance our liquidity. We discuss our liquidity in the *Financial Condition* section.

Electric Competition

We face competition in the sale of electricity in wholesale power markets and to retail customers.

Various states have moved to restructure their electricity markets. The pace of deregulation in these states varies based on historical moves to competition and responses to recent market events. While many states continue their support for retail competition and industry restructuring, other states that were considering deregulation have slowed their plans or postponed consideration. In addition, other states are reconsidering deregulation. We discuss merchant competition in more detail in *Item 1. Business—Competition* section.

The impacts of electric deregulation on BGE in Maryland are discussed in *Item 1. Business—Electric Regulatory Matters and Competition* section.

Gas Competition

The wholesale price of natural gas is not subject to regulation. All BGE gas customers have the option to purchase gas from alternate suppliers.

Regulation by the Maryland PSC

In addition to electric restructuring which was discussed in *Item 1. Business—Electric Regulatory Matters and Competition* section, regulation by the Maryland Public Service Commission (Maryland PSC) significantly influences BGE's businesses. The Maryland PSC determines the rates that BGE can charge customers for the electric distribution and gas businesses. The Maryland PSC incorporates into BGE's electric rates the transmission rates determined by the Federal Energy Regulatory Commission (FERC). BGE's electric rates are unbundled in customer billings to show separate components for delivery service (i.e. base rates), competitive transition charges, electric supply (commodity charge), transmission, a universal service surcharge, and certain taxes. The rates for BGE's regulated gas business continue to consist of a delivery charge (base rate) and a commodity charge.

Base Rates

The base rate is the rate the Maryland PSC allows BGE to charge its customers for the cost of providing them delivery service, plus a profit. BGE has both an electric base rate and a gas base rate. Higher electric base rates apply during the summer when the demand for electricity is higher. Gas base rates are not affected by seasonal changes.

BGE may ask the Maryland PSC to increase base rates from time to time. The Maryland PSC historically has allowed BGE to increase base rates to recover its utility plant investment and operating costs, plus a profit, beginning at the time of replacement. Generally, rate increases improve the earnings of our regulated business because they allow us to collect more revenue. However, rate increases are normally granted based on historical data, and those increases may not always keep pace with increasing costs. Other parties may petition the Maryland PSC to decrease base rates.

As a result of the deregulation of electric generation in Maryland, BGE's residential electric base rates are frozen until July 2006. Electric base rates were frozen until July 2004 for commercial and industrial customers. We discuss electric deregulation in *Item 1. Business—Electric Regulatory Matters and Competition* section.

Electric Commodity and Transmission Charges

BGE electric commodity and transmission charges (standard offer service) are discussed in *Item 1. Business—Electric Regulatory Matters and Competition* section.

Gas Commodity Charge

BGE charges its gas customers separately for the natural gas they purchase. The price BGE charges for the natural gas is based on a market-based rates incentive mechanism approved by the Maryland PSC. We discuss market-based rates and a proceeding with the Maryland PSC in more detail in the *Regulated Gas Business—Gas Cost Adjustments* section and in *Note 6*.

Federal Regulation

FERC

The FERC has jurisdiction over various aspects of our business, including transmission and wholesale electricity sales. Although a FERC proposed rulemaking regarding implementation of a standard market design for wholesale electric markets appears to have halted, FERC has indicated that it continues to have a strong commitment to customer-focused, competitive wholesale power markets, with appropriate flexibility to accommodate regional differences. We believe that FERC's commitment should result in improved competitive markets across various regions.

Since 1997, operation of BGE's transmission system has been under the authority of PJM, the Regional Transmission Organization (RTO) for the Mid-Atlantic region, pursuant to FERC oversight. As the transmission operator, PJM operates the energy markets and conducts day-to-day operations of the bulk power system.

In addition to PJM, RTOs exist in other regions of the country, such as the Midwest, New York, and New England. In addition to operation of the transmission system and responsibility for transmission system reliability, these RTOs also operate, or plan to operate, energy markets for their region pursuant to FERC's oversight. Our merchant energy business participates in these regional energy markets. These markets are continuing to develop, and revisions to market structure are subject to review and approval in proceedings before FERC and other regulatory bodies. We cannot predict the outcome of these proceedings at this time. However, changes to the structure of these markets could have a material effect on our financial results.

Recent initiatives at FERC have included a review of its methodology for the granting of market-based rate authority to sellers of electricity. FERC has announced new interim tests that will be used to determine the extent to which companies may have market power in certain regions. Where market power is found to exist, companies may be required by FERC to

implement measures to mitigate the market power in order to maintain market-based rate authority. In addition, FERC is reviewing other aspects of its granting of market-based rate authority, including transmission market power, affiliate abuse, and barriers to entry. We cannot determine the eventual outcome of FERC's efforts in this regard and their impact on our financial results at this time.

In January 2005, BGE and other transmission owners filed a joint application at FERC to have network transmission rates established through a formula that tracks costs instead of through fixed rates in accordance with FERC guidelines. If accepted by FERC, the formula approach would take effect in June 2005, and transmission rates would be adjusted in June of each year based on the formula without the need for another transmission rate filing. We cannot predict the outcome of this proceeding including whether the FERC will accept the formula approach.

Other market changes are also being considered, including potential revisions to PJM's capacity market and rate design. Such changes will be subject to FERC's review and approval. We cannot predict the outcome of these proceedings or the possible effect on our, or BGE's, financial results at this time.

Federal Energy Legislation

While energy legislation was not passed by Congress in 2004, we expect that some form of energy legislation will be brought before Congress during the upcoming legislative session. We cannot predict the impact of potential legislation on our financial results at this time.

Weather

Merchant Energy Business

Weather conditions in the different regions of North America influence the financial results of our merchant energy business. Weather conditions can affect the supply of and demand for electricity and fuels. Changes in energy supply and demand may impact the price of these energy commodities in both the spot market and the forward market, which may affect our results in any given period. Typically, demand for electricity and its price are higher in the summer and the winter, when weather is more extreme. The demand for and price of natural gas and oil are higher in the winter. However, all regions of North America typically do not experience extreme weather conditions at the same time, thus we are not typically exposed to the effects of extreme weather in all parts of our business at once.

BGE

Weather affects the demand for electricity and gas for our regulated businesses. Very hot summers and very cold winters increase demand. Mild weather reduces demand. Weather affects residential sales more than commercial and industrial sales, which are mostly affected by business needs for electricity and gas. The Maryland PSC allows BGE to record a monthly adjustment to our regulated gas business revenues to eliminate the effect of abnormal weather patterns. We discuss this further in the *Regulated Gas Business—Weather Normalization* section.

Other Factors

A number of other factors significantly influence the level and volatility of prices for energy commodities and related derivative products for our merchant energy business. These factors include:

- ◆ seasonal daily and hourly changes in demand,
- ◆ number of market participants,
- ◆ extreme peak demands,
- ◆ available supply resources,
- ◆ transportation and transmission availability and reliability within and between regions,
- ◆ location of our generating facilities relative to the location of our load-serving obligations,
- ◆ implementation of new market rules governing operations of regional power pools,
- ◆ procedures used to maintain the integrity of the physical electricity system during extreme conditions,
- ◆ changes in the nature and extent of federal and state regulations, and
- ◆ international demand.

These factors can affect energy commodity and derivative prices in different ways and to different degrees. These effects may vary throughout the country as a result of regional differences in:

- ◆ weather conditions,
- ◆ market liquidity,
- ◆ capability and reliability of the physical electricity and gas systems,
- ◆ local transportation systems, and
- ◆ the nature and extent of electricity deregulation.

Our merchant energy business contracts with rail companies to ensure the delivery of coal to our coal-fired generation facilities. The timely delivery of coal together with the maintenance of appropriate levels of inventory is necessary to allow for continued, reliable generation from these facilities. In the second, third, and fourth quarters of 2004, we experienced delays in deliveries from one of the rail companies that supplies coal to our generating facilities. In response, we procured coal using an alternative delivery method to meet our contractual load obligations. We discuss the impact of these delays on our financial results in the *Mid-Atlantic Region* section. We expect the majority of the coal that was not delivered during 2004 will be delivered during 2005.

Other factors also impact the demand for electricity and gas in our regulated businesses. These factors include the number of customers and usage per customer during a given period. We use these terms later in our discussions of regulated electric and gas operations. In those sections, we discuss how these and other factors affected electric and gas sales during the periods presented.

The number of customers in a given period is affected by new home and apartment construction and by the number of businesses in our service territory.

Usage per customer refers to all other items impacting customer sales that cannot be measured separately. These factors include the strength of the economy in our service territory. When the economy is healthy and expanding, customers tend to

consume more electricity and gas. Conversely, during an economic downturn, our customers tend to consume less electricity and gas.

Environmental Matters and Legal Proceedings

We discuss details of our environmental matters in *Note 12* and *Item 1. Business—Environmental Matters* section. We discuss details of our legal proceedings in *Note 12*. Some of this information is about costs that may be material to our financial results.

Accounting Standards Adopted and Issued

We discuss recently adopted and issued accounting standards in *Note 1*.

Critical Accounting Policies

Our discussion and analysis of financial condition and results of operations is based on our consolidated financial statements that were prepared in accordance with accounting principles generally accepted in the United States of America. Management makes estimates and assumptions when preparing financial statements. These estimates and assumptions affect various matters, including:

- ◆ our reported amounts of revenues and expenses in our Consolidated Statements of Income,
- ◆ our reported amounts of assets and liabilities in our Consolidated Balance Sheets, and
- ◆ our disclosure of contingent assets and liabilities.

These estimates involve judgments with respect to numerous factors that are difficult to predict and are beyond management's control. As a result, actual amounts could materially differ from these estimates.

Management believes the following accounting policies represent critical accounting policies as defined by the Securities and Exchange Commission (SEC). The SEC defines critical accounting policies as those that are both most important to the portrayal of a company's financial condition and results of operations and require management's most difficult, subjective, or complex judgment, often as a result of the need to make estimates about the effect of matters that are inherently uncertain and may change in subsequent periods. We discuss our significant accounting policies, including those that do not require management to make difficult, subjective, or complex judgments or estimates, in *Note 1*.

Revenue Recognition/Mark-to-Market Method of Accounting

Our merchant energy business enters into contracts for energy, other energy-related commodities, and related derivatives. We record merchant energy business revenues using two methods of accounting: accrual accounting and mark-to-market accounting. We describe our use of accrual accounting (including hedge accounting) in more detail in *Note 1*.

We record revenues using the mark-to-market method of accounting for derivative contracts for which we are not permitted to use accrual accounting or hedge accounting. These mark-to-market activities include derivative contracts for energy and other energy-related commodities. Under the mark-to-market

method of accounting, we record the fair value of these derivatives as mark-to-market energy assets and liabilities at the time of contract execution. We record the changes in mark-to-market energy assets and liabilities on a net basis in "Nonregulated revenues" in our Consolidated Statements of Income.

Mark-to-market energy assets and liabilities consist of a combination of energy and energy-related derivative contracts. While some of these contracts represent commodities or instruments for which prices are available from external sources, other commodities and certain contracts are not actively traded and are valued using modeling techniques to determine expected future market prices, contract quantities, or both. The market prices and quantities used to determine fair value reflect management's best estimate considering various factors. However, future market prices and actual quantities will vary from those used in recording mark-to-market energy assets and liabilities, and it is possible that such variations could be material.

We record valuation adjustments to reflect uncertainties associated with certain estimates inherent in the determination of the fair value of mark-to-market energy assets and liabilities. The effect of these uncertainties is not incorporated in market price information or other market-based estimates used to determine fair value of our mark-to-market energy contracts. To the extent possible, we utilize market-based data together with quantitative methods for both measuring the uncertainties for which we record valuation adjustments and determining the level of such adjustments and changes in those levels.

We describe below the main types of valuation adjustments we record and the process for establishing each. Generally, increases in valuation adjustments reduce our earnings, and decreases in valuation adjustments increase our earnings. However, all or a portion of the effect on earnings of changes in valuation adjustments may be offset by changes in the value of the underlying positions.

- ◆ Close-out adjustment—represents the estimated cost to close out or sell to a third-party open mark-to-market positions. This valuation adjustment has the effect of valuing "long" positions (the purchase of a commodity) at the bid price and "short" positions (the sale of a commodity) at the offer price. We compute this adjustment using a market-based estimate of the bid/offer spread for each commodity and option price and the absolute quantity of our net open positions for each year. The level of total close-out valuation adjustments increases as we have larger unhedged positions, bid-offer spreads increase, or market information is not available, and it decreases as we reduce our unhedged positions, bid-offer spreads decrease, or market information becomes available. To the extent that we are not able to obtain observable market information for similar contracts, the close-out adjustment is equivalent to the initial contract margin, thereby resulting in no gain or loss at inception. In the absence of observable market information, there is a presumption that the transaction price is equal to the market value of the contract, and therefore we do not recognize a gain or loss at inception. We recognize such gains or losses in earnings

as we realize cash flows under the contract or when observable market data becomes available.

- ◆ Credit-spread adjustment—for risk management purposes, we compute the value of our mark-to-market energy assets and liabilities using a risk-free discount rate. In order to compute fair value for financial reporting purposes, we adjust the value of our mark-to-market energy assets to reflect the credit-worthiness of each counterparty based upon either published credit ratings, or equivalent internal credit ratings and associated default probability percentages. We compute this adjustment by applying a default probability percentage to our outstanding credit exposure, net of collateral, for each counterparty. The level of this adjustment increases as our credit exposure to counterparties increases, the maturity terms of our transactions increase, or the credit ratings of our counterparties deteriorate, and it decreases when our credit exposure to counterparties decreases, the maturity terms of our transactions decrease, or the credit ratings of our counterparties improve.

Market prices for energy and energy-related commodities vary based upon a number of factors, and changes in market prices affect both the recorded fair value of our mark-to-market energy contracts and the level of future revenues and costs associated with accrual-basis activities. Changes in the value of our mark-to-market energy contracts will affect our earnings in the period of the change, while changes in forward market prices related to accrual-basis revenues and costs will affect our earnings in future periods to the extent those prices are realized. We cannot predict whether, or to what extent, the factors affecting market prices may change, but those changes could be material and could affect us either favorably or unfavorably. We discuss our market risk in more detail in the *Market Risk* section.

In October 2002, the EITF reached a consensus on Issue 02-3. This consensus prohibits mark-to-market accounting for energy-related contracts that do not meet the definition of a derivative under Statement of Financial Accounting Standards (SFAS) No. 133, *Accounting for Derivative Instruments and Hedging Activities, as amended*. As a result, we began to account for all non-derivative contracts on the accrual basis of accounting effective January 1, 2003 as described in *Note 1*. The consensus also prohibits recording unrealized gains or losses at the inception of derivative contracts unless the fair value of each contract in its entirety is evidenced by quoted market prices or other current market transactions for contracts with similar terms and counterparties, and it requires gains and losses on derivative energy trading contracts (whether realized or unrealized) to be reported as revenue on a net basis in the income statement.

EITF 02-3 affects the timing of recognizing earnings on non-derivative transactions. In general, beginning in 2003 earnings on non-derivative transactions subject to EITF 02-3 are no longer recognized at the inception of the transactions as they were under mark-to-market accounting because they are subject to accrual accounting and are recognized over the term of the transaction. As a result, while total earnings over the term of a

transaction are the same as they would have been under mark-to-market accounting, our reported earnings for contracts subject to EITF 02-3 generally match the cash flows from those contracts more closely. Additionally, because we record revenues and costs on a gross basis under accrual accounting, our revenues and costs increased, but our earnings have not been affected by gross versus net reporting.

The impact of derivative contracts on our revenues and costs is affected by many factors, including:

- ◆ our ability to designate and qualify derivative contracts for normal purchase and sale accounting or hedge accounting under SFAS No. 133,
- ◆ potential volatility in earnings from derivative contracts that serve as economic hedges but do not meet the accounting requirements to qualify for normal purchase and sale accounting or hedge accounting,
- ◆ our ability to enter into new mark-to-market derivative origination transactions, and
- ◆ sufficient liquidity and transparency in the energy markets to permit us to record gains at inception of new derivative contracts because fair value is evidenced by quoted market prices, current market transactions, or other observable market information.

We discuss the impact of mark-to-market accounting on our financial results in the *Results of Operations—Merchant Energy Business* section.

Evaluation of Assets for Impairment and Other Than Temporary Decline in Value

Long-Lived Assets

We are required to evaluate certain assets that have long lives (for example, generating property and equipment and real estate) to determine if they are impaired when certain conditions exist. SFAS No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, provides the accounting requirements for impairments of long-lived assets. We are required to test our long-lived assets for recoverability whenever events or changes in circumstances indicate that their carrying amount may not be recoverable. Examples of such events or changes are:

- ◆ a significant decrease in the market price of a long-lived asset,
- ◆ a significant adverse change in the manner an asset is being used or its physical condition,
- ◆ an adverse action by a regulator or in the business climate,
- ◆ an accumulation of costs significantly in excess of the amount originally expected for the construction or acquisition of an asset,
- ◆ a current-period loss combined with a history of losses or the projection of future losses, or
- ◆ a change in our intent about an asset from an intent to hold to a greater than 50% likelihood that an asset will be sold or disposed of before the end of its previously estimated useful life.

For long-lived assets that are expected to be held and used, SFAS No. 144 provides that an impairment loss shall only be recognized if the carrying amount of an asset is not recoverable and exceeds its fair value. The carrying amount of an asset is

not recoverable under SFAS No. 144 if the carrying amount exceeds the sum of the undiscounted future cash flows expected to result from the use and eventual disposition of the asset. Therefore, when we believe an impairment condition may have occurred, we are required to estimate the undiscounted future cash flows associated with a long-lived asset or group of long-lived assets. This necessarily requires us to estimate uncertain future cash flows.

In order to estimate an asset's future cash flows, we consider historical cash flows and changes in the market environment and other factors that may affect future cash flows. To the extent applicable, the assumptions we use are consistent with forecasts that we are otherwise required to make (for example, in preparing our other earnings forecasts). If we are considering alternative courses of action to recover the carrying amount of a long-lived asset (such as the potential sale of an asset), we probability-weight the alternative courses of action to estimate the cash flows.

We use our best estimates in making these evaluations and consider various factors, including forward price curves for energy, fuel costs, and operating costs. However, actual future market prices and project costs could vary from the assumptions used in our estimates, and the impact of such variations could be material.

For long-lived assets that can be classified as assets held for sale under SFAS No. 144, an impairment loss is recognized to the extent their carrying amount exceeds their fair value less costs to sell.

If we determine that the undiscounted cash flows from an asset to be held and used are less than the carrying amount of the asset, or if we have classified an asset as held for sale, we must estimate fair value to determine the amount of any impairment loss. The estimation of fair value under SFAS No. 144, whether in conjunction with an asset to be held and used or with an asset held for sale, also involves judgment. We consider quoted market prices in active markets to the extent they are available. In the absence of such information, we may consider prices of similar assets, consult with brokers, or employ other valuation techniques. Often, we will discount the estimated future cash flows associated with the asset using a single interest rate that is commensurate with the risk involved with such an investment or employ an expected present value method that probability-weights a range of possible outcomes. The use of these methods involves the same inherent uncertainty of future cash flows as discussed above with respect to undiscounted cash flows. Actual future market prices and project costs could vary from those used in our estimates, and the impact of such variations could be material.

We are also required to evaluate our equity-method and cost-method investments (for example, in partnerships that own power projects) to determine whether or not they are impaired. Accounting Principles Board Opinion (APB) No. 18, *The Equity Method of Accounting for Investments in Common Stock*, provides the accounting requirements for these investments. The standard for determining whether an impairment must be recorded under APB No. 18 is whether the investment has experienced a loss in

value that is considered an "other than a temporary" decline in value.

The evaluation and measurement of impairments under the APB No. 18 standard involves the same uncertainties as described on the previous page for long-lived assets that we own directly and account for in accordance with SFAS No. 144. Similarly, the estimates that we make with respect to our equity and cost-method investments are subject to variation, and the impact of such variations could be material. Additionally, if the projects in which we hold these investments recognize an impairment under the provisions of SFAS No. 144, we would record our proportionate share of that impairment loss and would evaluate our investment for an other than temporary decline in value under APB No. 18.

Debt and Equity Securities

Our investments in debt and equity securities are subject to impairment evaluations under SFAS No. 115, *Accounting for Certain Investments in Debt and Equity Securities*. SFAS No. 115 requires us to determine whether a decline in fair value of an investment below the amortized cost basis is other than temporary. If we determine that the decline in fair value is judged to be other than temporary, the cost basis of the investment must be written down to fair value as a new cost basis. We discuss EITF 03-1, *The Meaning of Other Than Temporary Impairment and Its Application to Certain Investments*, in the *Accounting Standards Issued* section of *Note 1*.

Goodwill

Goodwill is the excess of the purchase price of an acquired business over the fair value of the net assets acquired. We account for goodwill and other intangibles under the provisions of SFAS No. 142, *Goodwill and Other Intangible Assets*. We do not amortize goodwill and certain other intangible assets. SFAS No. 142 requires us to evaluate goodwill for impairment at least annually or more frequently if events and circumstances indicate the business might be impaired. Goodwill is impaired if the carrying value of the business exceeds fair value. Annually, we estimate the fair value of the businesses we have acquired using techniques similar to those used to estimate future cash flows for long-lived assets as discussed on the previous page, which involves judgment. If the estimated fair value of the business is less than its carrying value, an impairment loss is required to be recognized to the extent that the carrying value of goodwill is greater than its fair value.

Asset Retirement Obligations

We incur legal obligations associated with the retirement of certain long-lived assets. SFAS No. 143, *Accounting for Asset Retirement Obligations*, provides the accounting for legal obligations associated with the retirement of long-lived assets. We incur such legal obligations as a result of environmental and other government regulations, contractual agreements, and other factors. The application of this standard requires significant judgment due to the large number and diverse nature of the assets in our various businesses and the estimation of future cash flows required to measure legal obligations associated with the retirement of specific assets.

SFAS No. 143 requires the use of an expected present value methodology in measuring asset retirement obligations that involves judgment surrounding the inherent uncertainty of the probability, amount and timing of payments to settle these obligations, and the appropriate interest rates to discount future cash flows. We use our best estimates in identifying and measuring our asset retirement obligations in accordance with SFAS No. 143.

Our nuclear decommissioning costs represent our largest asset retirement obligation. This obligation primarily results from the requirement to decommission and decontaminate our nuclear generating facilities in connection with their future retirement. We utilize site-specific decommissioning cost estimates to determine our nuclear asset retirement obligations. However, given the magnitude of the amounts involved, complicated and ever-changing technical and regulatory requirements, and the very long time horizons involved, the actual obligation could vary from the assumptions used in our estimates, and the impact of such variations could be material.

Significant Events

In 2004, we recorded the following special items in earnings:

	Pre-Tax	After-Tax
	<i>(In millions)</i>	
Loss from discontinued operations	\$(75.6)	\$(49.1)
Recognition of 2003 synthetic fuel tax credits	—	35.9
Workforce reduction costs	(9.7)	(5.9)
Impairment losses and other costs	(3.7)	(2.2)
Net loss on sales of investments and other assets	(1.2)	(0.6)
Total special items	\$(90.2)	\$(21.9)

Loss from Discontinued Operations

During 2004, we completed the sale of a geothermal facility in Hawaii. We recorded a loss of \$77.7 million pre-tax, or \$50.4 million after-tax, during the year ended December 31, 2004. We reported the after-tax loss as a component of "Loss from discontinued operations" in our Consolidated Statements of Income. Additionally, prior to sale we recognized earnings from the facility of \$2.1 million pre-tax, or \$1.3 million after-tax as a component of "Loss from discontinued operations." We discuss the loss from discontinued operations in more detail in *Note 2*.

Synthetic Fuel Tax Credits

We have investments in facilities that manufacture solid synthetic fuel produced from coal as defined under Section 29 of the Internal Revenue Code for which we can claim tax credits on our Federal income tax return until 2007. We recognize the tax benefit of these credits in our Consolidated Statements of Income when we believe it is highly probable that the credits will be sustained.

As of December 31, 2004, we have recognized cumulative tax benefits associated with Section 29 credits of \$201.2 million. In 2004, we recognized \$123.2 million in tax benefits for Section 29 credits, including \$35.9 million for credits relating to 2003 production. We discuss the synthetic fuel tax credits in more detail in *Note 10*.

Workforce Reduction Costs

In the fourth quarter of 2004, we approved a restructuring of the work forces of the Nine Mile Point and Calvert Cliffs nuclear generating facilities that was effective in January 2005. In connection with this restructuring, approximately 108 employees will receive severance and other benefits under our existing benefit programs. We accrued the estimated total cost of this reduction in workforce of \$9.7 million pre-tax, or \$5.9 million after-tax, in accordance with applicable accounting requirements. We expect to realize annual savings in the future from reduced labor and benefit costs approximately equal to the charge recorded in 2004.

Impairment of Financial Investment

Our other nonregulated businesses recognized a pre-tax impairment loss of \$3.7 million, or \$2.2 million after-tax, during the year ended December 31, 2004 related to an other than temporary decline in fair value of certain financial investments.

Net Loss on Sales of Investments and Other Assets

Our other nonregulated businesses recognized a net pre-tax loss of \$1.2 million, or \$0.6 million after-tax, during the year ended December 31, 2004 on the sales of non-core assets. We discuss our net loss on sales of investments and other assets in more detail in *Note 2*.

Acquisition

In June 2004, we completed our purchase of the R. E. Ginna nuclear facility (Ginna), which is located in Ontario, New York from Rochester Gas & Electric Corporation (RG&E). Ginna consists of a 495 megawatt reactor that entered service in 1970 and is licensed to operate until 2029. We discuss the acquisition further in *Note 15*.

Dividend Increase

In January 2005, we announced an increase in our quarterly dividend to \$0.335 per share on our common stock. This is equivalent to an annual rate of \$1.34 per share. Previously, our quarterly dividend on our common stock was \$0.285 per share, equivalent to an annual rate of \$1.14 per share.

Results of Operations

In this section, we discuss our earnings and the factors affecting them. We begin with a general overview, then separately discuss earnings for our operating segments. Significant changes in other income and expense, fixed charges, and income taxes are discussed in the aggregate for all segments in the *Consolidated Nonoperating Income and Expenses* section.

Overview

Results

	2004	2003	2002
	<i>(In millions, after-tax)</i>		
Merchant energy	\$439.0	\$313.0	\$247.2
Regulated electric	131.1	107.5	99.3
Regulated gas	22.2	43.0	31.1
Other nonregulated	(3.5)	12.2	148.0
Net Income Before Cumulative Effects of			
Changes in Accounting Principles	588.8	475.7	525.6
Loss from discontinued operations	(49.1)	—	—
Cumulative effects of changes in			
accounting principles	—	(198.4)	—
Net Income	\$539.7	\$277.3	\$525.6
<i>Special Items Included in Operations:</i>			
Recognition of 2003 synthetic fuel tax credits	\$ 35.9	\$ —	\$ —
Workforce reduction costs	(5.9)	(1.3)	(38.0)
Impairments of real estate, senior-living, and other investments	(2.2)	(0.4)	(1.2)
Net (loss) gain on sales of investments and other assets	(0.6)	16.4	166.7
Impairments of investment in qualifying facilities and domestic power projects	—	—	(9.9)
Costs associated with exit of BGE Home merchandise stores	—	—	(6.1)
Total Special Items	\$ 27.2	\$ 14.7	\$ 111.5

2004

Our total net income for 2004 increased \$262.4 million, or \$1.46 per share, compared to the same period of 2003 mostly because of the following:

- ◆ In 2003, we recorded a \$266.1 million after-tax, or \$1.60 per share, loss for the cumulative effect of adopting EITF 02-3. This was partially offset by a \$67.7 million after-tax, or \$0.41 per share, gain for the cumulative effect of adopting Statement of Financial Accounting Standards (SFAS) No. 143, *Accounting for Asset Retirement Obligations*. These items had a combined negative impact during 2003.
- ◆ Our merchant energy business had higher earnings of \$78.4 million at our South Carolina synfuel facility primarily due to the recognition of \$35.9 million in tax credits associated with 2003 production and tax credits associated with 2004 production.
- ◆ We had higher earnings from our regulated electric business mostly because of the absence of \$19.4 million of after-tax incremental operations and maintenance expenses due to distribution service restoration efforts associated with Hurricane Isabel in 2003.

- ◆ We had higher earnings from our nuclear generating assets due to the June 2004 acquisition of Ginna, which contributed \$28.1 million after-tax, and higher generation at our Calvert Cliffs nuclear power plant, partially offset by lower generation by and lower power prices for the output of our Nine Mile Point facility in 2004 compared to 2003.
- ◆ We had higher earnings from our merchant energy business mostly due to the realization of wholesale contracts originated in prior periods, portfolio management, and favorable settlements at our retail electric operation of \$16.9 million pre-tax.
- ◆ We had higher earnings due to lower pre-tax losses of \$47.7 million associated with economic hedges that do not qualify for cash-flow hedge accounting treatment.
- ◆ We had higher earnings of \$20.9 million after-tax in 2004 due to a full year of operations at the High Desert facility.

These increases were partially offset by the following:

- ◆ We recorded a \$49.1 million after-tax, or \$0.28 per share, loss from discontinued operations.
- ◆ We had higher Sarbanes-Oxley 404 implementation costs of approximately \$15 million pre-tax, higher enterprise information systems expenditures of approximately \$8 million pre-tax, and higher compensation, benefit, and other inflationary cost increases.
- ◆ We had lower earnings from our regulated gas business mostly because of \$13.6 million after-tax of higher operations and maintenance expenses in 2004 and the absence of a \$4.7 million after-tax market-based rate gas recovery, which had a favorable effect in 2003.
- ◆ We recognized a gain of \$16.4 million after-tax related to non-core asset sales in 2003 that had a favorable impact in that period.

Earnings per share was impacted by additional dilution resulting from the issuance of 6.0 million shares of common stock on July 1, 2004.

2003

Our total net income for 2003 decreased \$248.3 million, or \$1.54 per share, compared to 2002 mostly because of the following:

- ◆ We recorded a \$266.1 million after-tax, or \$1.60 per share, charge for the cumulative effect of adopting EITF 02-3. This was partially offset by a \$67.7 million after-tax, or \$0.41 per share, gain for the cumulative effect of adopting SFAS No. 143.
- ◆ We recognized a \$163.3 million after-tax, or \$1.00 per share, gain on the sale of our investment in Orion Power Holdings, Inc. (Orion) in 2002 that had a positive impact in that period. We discuss the sale of Orion in more detail in *Note 2*.

- ◆ We had higher fixed charges of \$58.7 million due to lower capitalized interest of \$30.2 million and \$28.5 million primarily related to a higher level of debt outstanding as a result of refinancing our High Desert facility.
- ◆ Our results reflect the impact of the shift to accrual accounting under EITF 02-3. Specifically, the absence of 2002 mark-to-market gains for contracts accounted for on an accrual basis in 2003 and the timing difference in the recognition of earnings for certain economic hedges, which we discuss further in the *Competitive Supply—Mark-to-Market Revenues* section, were only partially offset by the 2003 recognition of accrual earnings on transactions entered into in prior periods.
- ◆ Our regulated electric business incurred incremental distribution service restoration expenses of \$19.4 million after-tax associated with Hurricane Isabel.

These decreases were partially offset by the following:

- ◆ We had higher earnings from wholesale competitive supply activities including effective portfolio management, partially offset by lower mark-to-market origination in 2003.
- ◆ We had \$39.5 million of higher earnings from our regulated business, excluding the impacts of Hurricane Isabel.
- ◆ We had higher earnings from favorable generating plant operational performance. Specifically, our High Desert facility commenced operations in April 2003 contributing \$39.1 million after-tax, and Calvert Cliffs completed a steam generator replacement in April 2003, 58 fewer days than a similar outage that was completed in June 2002.
- ◆ We had \$36.7 million after-tax of higher workforce reduction costs in 2002 that had a negative impact in the period.
- ◆ We realized cost reductions due to productivity initiatives.
- ◆ We had higher earnings from a full year at our retail electric operation, which contributed \$20.3 million, and from the acquisition of our retail gas operation, which contributed \$4.1 million.
- ◆ Our other nonregulated business recognized a gain of \$16.4 million after-tax, or \$0.10 per share, in 2003 related to non-core asset sales.
- ◆ We had higher earnings from our other nonregulated businesses primarily related to improved operations of our international portfolio of \$7.0 million after-tax.
- ◆ We had \$6.1 million after-tax of costs associated with our exit of BGE Home merchandise stores in 2002 that had a negative impact in that period.
- ◆ We recognized impairments of certain investments in qualifying facilities, real estate, and other investments in 2002 that had a negative impact in that period.

Merchant Energy Business

Background

Our merchant energy business is a competitive provider of energy solutions for various customers. We discuss the impact of deregulation on our merchant energy business in *Item 1. Business—Competition* section.

Business—Competition section.

We record merchant energy revenues and expenses in our financial results in different periods depending upon which portion of our business they affect. We discuss our revenue recognition policies in the *Critical Accounting Policies* section and in *Note 1*. We summarize our policies as follows:

- ◆ We record revenues as they are earned and fuel and purchased energy expenses as they are incurred for contracts and activities subject to accrual accounting, including certain load-serving activities.
- ◆ Prior to the settlement of the forecasted transaction being hedged, we record changes in the fair value of contracts designated as cash-flow hedges in other comprehensive income to the extent that the hedges are effective. We record the effective portion of the changes in fair value of hedges in earnings in the period the settlement of the hedged transaction occurs. We record the ineffective portion of the changes in fair value of hedges, if any, in earnings in the period in which the change occurs.
- ◆ We record changes in the fair value of contracts that are subject to mark-to-market accounting in revenues on a net basis in the period in which the change occurs.

Mark-to-market accounting requires us to make estimates and assumptions using judgment in determining the fair value of certain contracts and in recording revenues from those contracts. We discuss the effects of mark-to-market accounting on our revenues in the *Competitive Supply—Mark-to-Market Revenues* section. We discuss mark-to-market accounting and the accounting policies for the merchant energy business further in the *Critical Accounting Policies* section and in *Note 1*.

In the first quarter of 2003, we adopted EITF 02-3, which required non-derivative contracts to be accounted for on the accrual basis and recorded in our Consolidated Statements of Income gross rather than net. The primary contracts affected were our full requirements load-serving contracts and unit-contingent power purchase contracts. The majority of these contracts were in Texas and New England and were entered into prior to our shift to accrual accounting earlier in 2002. We discuss our shift to accrual accounting during 2002 in more detail in the *Wholesale Accrual Activities* section. After the re-designation of existing contracts to non-trading, we record revenues and expenses on a gross basis, but this does not have a material impact on earnings because the resulting increase in revenues is accompanied by a similar increase in fuel and purchased energy expenses.

EITF 02-3 affects the timing of recognizing earnings on non-derivative transactions. Earnings on new non-derivative transactions subject to EITF 02-3 are no longer recognized at the inception of the transactions as they were under mark-to-market accounting because they are subject to accrual accounting and are recognized over the term of the transaction.

Additionally, we expect lower earnings volatility for this portion of our business because unrealized changes in the fair value of non-derivative load-serving contracts will no longer be recorded as revenue at the time of the change as they were under mark-to-market accounting.

Results

	2004	2003	2002
	<i>(In millions)</i>		
Revenues	\$10,389.9	\$ 7,632.9	\$ 2,781.3

Above amounts include intercompany transactions eliminated in our Consolidated Financial Statements. Note 3 provides a reconciliation of operating results by segment to our Consolidated Financial Statements. Certain prior-year amounts have been reclassified to conform with the current year's presentation.

Revenues and Fuel and Purchased Energy Expenses

Our merchant energy business manages the revenues we realize from the sale of energy to our customers and our costs of procuring fuel and energy. The difference between revenues and fuel and purchased energy expenses is the gross margin of our merchant energy business, and this measure is management's primary tool for assessing the profitability of our merchant energy business. Accordingly, we believe it is appropriate to discuss the operating results of our merchant energy business by analyzing the changes in gross margin between periods. In managing our portfolio, we occasionally terminate, restructure, or acquire contracts. Such transactions are within the normal course of managing our portfolio and may materially impact the timing of our recognition of revenues, fuel and purchased energy expenses, and cash flows.

We analyze our merchant energy gross margin in the following categories because of the risk profile of each category, differences in the revenue sources, and the nature of fuel and purchased energy expenses. With the exception of a portion of our competitive supply activities that we are required to account for using the mark-to-market method of accounting, all of these activities are accounted for on an accrual basis.

- ◆ Mid-Atlantic Region—our fossil, nuclear, and hydroelectric generating facilities and load-serving activities in the PJM Interconnection (PJM) region for which the output is primarily used to serve BGE. This also includes active portfolio management of the generating assets and other physical and financial contractual arrangements, as well as other PJM competitive supply activities.
- ◆ Plants with Power Purchase Agreements—our generating facilities outside the Mid-Atlantic Region with long-term power purchase agreements, including the Nine Mile Point, Ginna, Oleander, University Park, and High Desert facilities.
- ◆ Wholesale Competitive Supply—our marketing and risk management operation that provides energy products and services outside the Mid-Atlantic Region primarily to distribution utilities, power generators, and other wholesale customers.
- ◆ Retail Competitive Supply—our operation that provides electric and gas energy products and services to commercial and industrial customers.
- ◆ Other—our investments in qualifying facilities and domestic power projects and our operations and maintenance consulting services.

We provide a summary of our revenues, fuel and purchased energy expenses, and gross margin as follows:

	2004	2003	2002			
<i>(Dollar amounts in millions)</i>						
Revenues:						
Mid-Atlantic Region	\$ 1,925.6	\$ 1,696.2	\$ 1,415.1			
Plants with Power Purchase Agreements	756.9	620.0	456.4			
Competitive Supply						
Retail	4,280.0	2,567.7	312.7			
Wholesale	3,353.8	2,703.9	540.7			
Other	73.6	45.1	56.4			
Total	\$10,389.9	\$ 7,632.9	\$ 2,781.3			
Fuel and purchased energy expenses:						
Mid-Atlantic Region	\$ (946.9)	\$ (711.6)	\$ (551.2)			
Plants with Power Purchase Agreements	(57.6)	(51.9)	(40.0)			
Competitive Supply						
Retail	(4,011.4)	(2,389.5)	(273.2)			
Wholesale	(3,113.4)	(2,553.1)	(343.9)			
Other	—	—	—			
Total	\$ (8,129.3)	\$ (5,706.1)	\$ (1,208.3)

Total	\$ 2,260.6	100%	\$ 1,926.8	100%	\$ 1,573.0	100%

Certain prior-year amounts have been reclassified to conform with the current year's presentation.

Mid-Atlantic Region

	2004	2003	2002
<i>(In millions)</i>			
Revenues	\$1,925.6	\$1,696.2	\$1,415.1
Fuel and purchased energy expenses	(946.9)	(711.6)	(551.2)
Gross margin	\$ 978.7	\$ 984.6	\$ 863.9

The decrease in Mid-Atlantic Region gross margin in 2004 compared to 2003 is primarily due to lower fossil plant availability resulting in lower margin of \$17.0 million and higher coal costs primarily due to purchasing coal from alternative suppliers in 2004 at higher prices than in 2003 as a result of delays in deliveries as discussed in the *Business Environment—Other Factors* section. These decreases were partially offset by an increase in margin of \$7.1 million related to new load-serving obligations, offset in part by lower volumes served to BGE resulting from small commercial customers leaving BGE's standard offer service due to the end of fixed-price service in June 2004.

The increase in Mid-Atlantic Region gross margin in 2003 compared to 2002 is primarily due to:

- ◆ higher margins of approximately \$85 million from our owned generation in excess of that used to serve BGE's standard offer service, including our active portfolio management of these generating assets and associated physical and financial arrangements, and
- ◆ a gain on the assumption of the Allegheny Energy Supply Company, L.L.C. load-serving contract for the remaining 10% of the BGE standard offer service load.

Plants with Power Purchase Agreements

	2004	2003	2002
	(In millions)		
Revenues	\$756.9	\$620.0	\$456.4
Fuel and purchased energy expenses	(57.6)	(51.9)	(40.0)
Gross margin	\$699.3	\$568.1	\$416.4

The increase in gross margin from our Plants with Power Purchase Agreements in 2004 compared to 2003 is primarily due to:

- ◆ gross margin of \$112.4 million from Ginna, which was acquired in June 2004. The increase in gross margin includes higher revenues of \$119.1 million. We discuss this acquisition in more detail in *Note 14*, and
- ◆ higher gross margin of \$45.9 million from the High Desert facility that contributed a full year of gross margin in 2004 compared to eight months in 2003.

These increases in gross margin were partially offset by lower gross margin of \$21.0 million at our Nine Mile Point facility primarily due to lower revenues from reduced contract prices for the output in 2004 compared to 2003 and lower generation.

The increase in gross margin from our Plants with Power Purchase Agreements in 2003 compared to 2002 is primarily due to:

- ◆ gross margin of \$105.5 million from the High Desert facility, which commenced operations in the second quarter of 2003. The increase in gross margin includes higher revenues of \$111.3 million,
- ◆ higher gross margin of \$22.6 million from Nine Mile Point primarily due to fewer forced outage days in 2003 compared to 2002, and

- ◆ higher gross margin of \$18.7 million from the Oleander generating facility that contributed a full year of gross margin during 2003 compared to six months of operations during 2002.

Competitive Supply Retail

	2004	2003	2002
	(In millions)		
Accrual revenues	\$ 4,281.0	\$ 2,567.7	\$ 312.7
Mark-to-market revenues	(1.0)	—	—
Fuel and purchased energy expenses	(4,011.4)	(2,389.5)	(273.2)
Gross margin	\$ 268.6	\$ 178.2	\$ 39.5

The increase in gross margin from our retail competitive supply activities in 2004 compared to 2003 is primarily due to higher electric gross margin of \$66.1 million mostly due to:

- ◆ serving approximately 16 million more megawatt hours partially offset by lower realized margins due to increased wholesale power costs in 2004 compared to 2003,
- ◆ a bankruptcy settlement from PG&E of \$10.3 million, and a favorable settlement of a pre-acquisition liability of \$6.6 million also related to a bankruptcy proceeding, and
- ◆ lower contract amortization, which reduces margin, of \$9.2 million relating to the fair value of contracts at acquisition.

In addition, we had higher gas gross margin contribution of \$17.1 million from Blackhawk Energy Services and Kaztex Energy Management, which were acquired in October 2003. We discuss our acquisitions in more detail in *Note 15*.

The increase in gross margin from our retail competitive supply activities in 2003 compared to 2002 is due to:

- ◆ a full year of electric gross margin contribution of \$115.9 million. The increase in electric gross margin includes higher revenues of \$1,170.2 million. Our retail electric operation was acquired in September 2002, and
- ◆ a full year of gas gross margin contribution of \$22.8 million. The increase in gas gross margin includes higher revenues of \$1,084.8 million. Our retail gas operation was acquired in December 2002.

Wholesale

	2004	2003	2002
	(In millions)		
Accrual revenues	\$ 3,253.7	\$ 2,667.7	\$ 310.7
Fuel and purchased energy expenses	(3,113.4)	(2,553.1)	(343.9)
Wholesale accrual activities	140.3	114.6	(33.2)
Mark-to-market revenues	100.1	36.2	230.0
Gross margin	\$ 240.4	\$ 150.8	\$ 196.8

In January 2003, we adopted EITF 02-3 that changed the accounting for certain energy contracts. EITF 02-3 prohibits the use of mark-to-market accounting for any energy-related contracts that are not derivatives. Any non-derivative contracts must be accounted for on the accrual basis and recorded in the income statement gross rather than net upon application of EITF 02-3. This change applied immediately to new contracts executed after October 25, 2002 and applied to existing non-derivative energy-related contracts beginning January 1, 2003. During 2002, the majority of our wholesale results were on the mark-to-market method of accounting.

The portion of competitive supply revenues, fuel and purchased energy expenses, and gross margin derived from accrual and mark-to-market contracts changed significantly due to the adoption of EITF 02-3. Effective January 1, 2003, we began to account for all non-derivative contracts on the accrual basis, whereas we had accounted for these contracts on the mark-to-market basis in 2002. We also began to recognize origination gains only for derivative contracts for which we have observable market prices. These changes increased accrual competitive supply revenues, fuel and purchased energy expenses, and gross margin and decreased mark-to-market competitive supply revenues and gross margin in 2003 as compared to 2002.

EITF 02-3 affected a large number of competitive supply contracts, and we cannot quantify its total impact precisely because we cannot recast our 2002 results to reflect accrual accounting, nor did we maintain separate mark-to-market accounting records for accrual contracts beginning in 2003. However, the larger portion of our competitive supply activities that became subject to accrual accounting under EITF 02-3 resulted in an increase in total competitive supply revenues and fuel and purchased energy expenses, but a decrease in total competitive supply gross margin in 2003 compared to 2002.

We analyze our wholesale accrual and mark-to-market competitive supply activities separately below.

Wholesale Accrual Activities

The increase in gross margin from our wholesale accrual activities in 2004 compared to 2003 is primarily due to approximately \$50 million in the New England region due to higher realized contract margins in 2004 compared to 2003 and higher volumes served. This increase was partially offset by higher transportation costs for our gas trading portfolio of approximately \$16 million. The transportation costs associated with this portfolio are accounted for on an accrual basis, while our gas trading portfolio is recorded as mark-to-market. In addition, we incurred higher operating costs of \$5.0 million related to our South Carolina synthetic fuel facility.

The increase in revenues, fuel and purchased energy expenses, and gross margin from our wholesale accrual activities in 2003 compared to 2002 is primarily due to the impact of the adoption of EITF 02-3 as discussed above. While it is not practicable to determine precisely the impact of EITF 02-3 on revenues and gross margin, accrual revenues for 2003 include approximately \$1.4 billion from load-serving contracts that existed at January 1, 2003 (the date EITF 02-3 was adopted) which had been accounted for on a mark-to-market basis in 2002.

In addition, our wholesale accrual revenues and fuel and purchased energy expenses were impacted in 2002 by the re-designation of our Texas and New England load-serving activities to accrual.

In February 2002, we began to manage our Texas load-serving activities as a physical delivery business separate from our trading activities and re-designated these activities as non-trading. After the change in designation, the results of our Texas load-serving activities are included in "Nonregulated revenues" on a gross basis as power is delivered to our customers and "Fuel and purchased energy expenses" as costs are incurred. Prior to the re-designation, the results of these activities were reported on a net basis as part of mark-to-market revenues included in "Nonregulated revenues." Mark-to-market revenues for the Texas trading activities were a net loss of \$1.2 million for the portion of 2002 prior to designation as non-trading.

Since future power sales revenues and costs from these activities are reflected in our Consolidated Statements of Income as part of "Nonregulated revenues" when power is delivered and "Fuel and purchased energy expenses" when the costs are incurred, this re-designation generally delays the recognition of earnings from these activities compared to what we would have recognized under mark-to-market accounting. The change in designation of our Texas load-serving activities did not impact our cash flows.

In addition, our New England load-serving activities consist primarily of contracts to serve the full energy and capacity requirements of retail customers and electric distribution utilities and associated power purchase agreements to supply our customers' requirements. We manage these activities primarily to assure profitable delivery of customers' energy requirements rather than as a traditional proprietary trading activity where profits or losses result from taking directional positions on market price changes. Therefore, we use accrual accounting for New England load-serving transactions and associated power purchase agreements entered into since the second quarter of 2002.

Because applicable accounting rules significantly limited the circumstances under which contracts previously designated as a trading activity could be re-designated as non-trading, prior to EITF 02-3, we were required to continue to include contracts entered into before the second quarter of 2002 in our mark-to-market accounting portfolio. However, under EITF 02-3, on January 1, 2003, we removed these contracts from our "Mark-to-market energy assets and liabilities" and began to account for these contracts under the accrual method of accounting.

Mark-to-Market Revenues

Mark-to-market revenues include net gains and losses from origination and risk management activities for which we use the mark-to-market method of accounting. We discuss these activities and the mark-to-market method of accounting in more detail in the *Critical Accounting Policies* section and in *Note 1*. We also discuss the implications of EITF 02-3 on the mark-to-market method of accounting in the *Critical Accounting Policies* section.

As a result of the nature of our operations and the use of mark-to-market accounting for certain activities, mark-to-market revenues and earnings will fluctuate. We cannot predict these fluctuations, but the impact on our revenues and earnings could be material. We discuss our market risk in more detail in the *Market Risk* section. The primary factors that cause fluctuations in our mark-to-market revenues and earnings are:

- ◆ the number, size, and profitability of new transactions including terminations or restructuring of existing contracts,
- ◆ the number and size of our open derivative positions, and
- ◆ changes in the level and volatility of forward commodity prices and interest rates.

Mark-to-market revenues were as follows:

	2004	2003	2002
	<i>(In millions)</i>		
Unrealized revenues			
Origination gains	\$ 19.7	\$ 62.3	\$160.4
Risk management			
Unrealized changes in fair value	79.4	(26.1)	58.8
Changes in valuation techniques	—	—	10.8
Reclassification of settled contracts to realized	(85.4)	(123.5)	(45.4)
Total risk management	(6.0)	(149.6)	24.2
Total unrealized revenues*	13.7	(87.3)	184.6
Realized revenues	85.4	123.5	45.4
Total mark-to-market revenues	\$ 99.1	\$ 36.2	\$230.0

* Total unrealized revenues is the sum of origination transactions and total risk management.

Origination gains arise primarily from contracts that our wholesale marketing and risk management operation structures to meet the risk management needs of our customers. Transactions that result in origination gains may be unique and provide the potential for individually significant revenues and gains from a single transaction.

Origination gains represent the initial fair value recognized on these structured transactions. The recognition of origination gains is dependent on the existence of observable market data that validates the initial fair value of the contract. Origination gains arose from 13 transactions completed in 2004 and 14 transactions completed in 2003, of which no transaction individually contributed in excess of \$10 million pre-tax.

As noted on the previous page, the recognition of origination gains is dependent on sufficient observable market data. Liquidity and market conditions impact our ability to identify sufficient, objective market-price information to permit recognition of origination gains. As a result, while our strategy and competitive position provide the opportunity to continue to originate such transactions, the level of origination revenue we are able to recognize may vary from year to year as a result of the number, size, and market-price transparency of the individual transactions executed in any period.

Risk management revenues represent both realized and unrealized gains and losses from changes in the value of our entire portfolio, including the recognition of gains associated with decreases in the close-out adjustment when we are able to obtain sufficient market price information. We discuss the changes in mark-to-market revenues below. We show the relationship between our revenues and the change in our net mark-to-market energy asset later in this section.

Our mark-to-market revenues were and continue to be affected by a decrease in the portion of our activities that is subject to mark-to-market accounting. As previously discussed in the *Wholesale Accrual Activities* section, we re-designated our Texas load-serving activities as accrual during 2002, and we began to account for new non-derivative origination transactions on the accrual basis rather than under mark-to-market accounting. Beginning January 1, 2003, under EITF 02-3, we no longer record existing non-derivative contracts at fair value. Further, effective July 1, 2002, to the extent that we are not able to observe quoted market prices or other current market transactions for contract values determined using models, we record a valuation adjustment to result in zero gain or loss at inception. We remove the valuation adjustment in determining fair value when we obtain current market information for contracts with similar terms and counterparties.

Mark-to-market revenues increased \$62.9 million in 2004 compared to 2003 mostly because of the impact of lower mark-to-market losses on economic hedges that do not qualify for hedge accounting treatment as discussed in more detail on the next page and lower losses from risk management activities primarily due to favorable changes in regional power prices, and price volatility. These increases were partially offset by a lower level of origination gains in 2004 compared to 2003. The lower level of origination gains is primarily due to higher individually significant gains on contracts in 2003 that had a positive impact in that period.

Mark-to-market revenues decreased \$193.8 million in 2003 compared to 2002 mostly because of lower revenues from origination transactions, net losses from risk management activities compared to net gains in the prior year, and the reclassification of revenues from settled contracts to realized revenues. The lower level of origination transactions primarily reflects the continuing reduction of the portion of our activities subject to mark-to-market accounting. The decrease in risk management revenues is primarily due to mark-to-market revenue associated with the restructuring of our High Desert contract with the CDWR that had a positive impact in 2002, unfavorable changes in regional power prices, price volatility, and the impact of mark-to-market losses on economic hedges that did not qualify for hedge accounting treatment as discussed in more detail below.

With the implementation of EITF 02-3 in the first quarter of 2003, all of our load-serving contracts were converted to accrual accounting. However, several economically effective hedges on these positions did not qualify for accrual accounting treatment under SFAS No. 133 and remained in the mark-to-market portfolio. In 2003, increasing forward prices shifted value between accrual load-serving positions and associated mark-to-market hedges producing a timing difference in the recognition of earnings on related transactions. As a result, we recorded \$0.3 million of pre-tax gains in 2004 and \$47.4 million of pre-tax losses on the mark-to-market hedges during 2003. This mark-to-market loss will be offset as we realize the related accrual load-serving positions in cash.

Mark-to-Market Energy Assets and Liabilities

Our mark-to-market energy assets and liabilities are comprised of derivative contracts. While some of our mark-to-market contracts represent commodities or instruments for which prices are available from external sources, other commodities and certain contracts are not actively traded and are valued using other pricing sources and modeling techniques to determine expected future market prices, contract quantities, or both. We discuss our modeling techniques later in this section.

Mark-to-market energy assets and liabilities consisted of the following:

<i>At December 31,</i>	2004	2003
	<i>(In millions)</i>	
Current Assets	\$567.3	\$504.8
Noncurrent Assets	359.8	265.8
Total Assets	927.1	770.6
Current Liabilities	559.7	490.4
Noncurrent Liabilities	315.0	261.4
Total Liabilities	874.7	751.8
Net mark-to-market energy asset	\$ 52.4	\$ 18.8

Certain prior-year amounts have been reclassified to conform with the current year's presentation.

The following are the primary sources of the change in net mark-to-market energy asset during 2004 and 2003:

	2004	2003
	<i>(In millions)</i>	
Fair value beginning of year	\$ 18.8	\$516.6
Changes in fair value recorded as revenues		
Origination gains	\$ 19.7	\$ 62.3
Unrealized changes in fair value	79.4	(26.1)
Changes in valuation techniques	—	—
Reclassification of settled contracts to realized	(85.4)	(123.5)
Total changes in fair value recorded as revenues	13.7	(87.3)
Cumulative effect impact of EITF 02-3	—	(379.4)
Contracts designated as normal purchases/sales and hedges upon implementation of EITF 02-3	—	(58.2)
Contract exchange	—	(68.9)
Changes in value of exchange-listed futures and options	(15.8)	(8.4)
Net change in premiums on options	29.4	99.3
Other changes in fair value	6.3	5.1
Fair value at end of year	\$ 52.4	\$ 18.8

Changes in the net mark-to-market energy asset that affected revenues were as follows:

- ◆ Origination gains represent the initial unrealized fair value at the time these contracts are executed to the extent permitted by applicable accounting rules.
- ◆ Unrealized changes in fair value represent unrealized changes in commodity prices, the volatility of options on commodities, the time value of options, and other valuation adjustments.
- ◆ Changes in valuation techniques represent improvements in estimation techniques, including modeling and other statistical enhancements used to value our portfolio to reflect more accurately the economic value of our contracts.
- ◆ Reclassification of settled contracts to realized represents the portion of previously unrealized amounts settled during the period and recorded as realized revenues.

The net mark-to-market energy asset also changed due to the following items recorded in accounts other than revenue:

- ◆ The cumulative effect impact of EITF 02-3 represents the non-derivative portion of the net asset that was removed from our Consolidated Balance Sheets as a cumulative effect of change in accounting principle effective January 1, 2003 as required by EITF 02-3.

- ◆ Contracts designated as normal purchases/sales and hedges upon implementation of EITF 02-3 represents the portion of the net asset reclassified to "Other assets or liabilities" under the normal purchases/normal sales provisions of SFAS No. 133 or "Risk management assets or liabilities" under the cash-flow hedge provisions of SFAS No. 133 in connection with the implementation of EITF 02-3 effective January 1, 2003.
- ◆ Contract exchange represents the fair value of a contract previously included in "Mark-to-market energy assets" that we terminated in a nonmonetary exchange with a counterparty. At that time, we also terminated a hedge contract with the same counterparty that was recorded in "Risk management liabilities." In exchange, we entered into a new cash-flow hedge transaction with the counterparty that we recorded at an amount equal to the fair value of the terminated contracts.
- ◆ Changes in value of exchange-listed futures and options are adjustments to remove unrealized revenue from exchange-traded contracts that are included in risk management revenues. The fair value of these contracts is recorded in "Accounts receivable" rather than "Mark-to-market energy assets" in our Consolidated Balance Sheets because these amounts are settled through our margin account with a third-party broker.
- ◆ Net changes in premiums on options reflects the accounting for premiums on options purchased as an increase in the net mark-to-market energy asset and premiums on options sold as a decrease in the net mark-to-market energy asset.

The settlement terms of our net mark-to-market energy asset and sources of fair value as of December 31, 2004 are as follows:

	Settlement Term							Fair Value
	2005	2006	2007	2008	2009	2010	Thereafter	
	<i>(In millions)</i>							
Prices provided by external sources (1)	\$17.2	\$29.5	\$ 123.0	\$ 61.6	\$ —	\$ —	\$ —	\$ 231.3
Prices based on models	(9.6)	(8.3)	(101.7)	(54.6)	(1.5)	(1.8)	(1.4)	(178.9)
Total net mark-to-market energy asset	\$ 7.6	\$21.2	\$ 21.3	\$ 7.0	\$(1.5)	\$(1.8)	\$(1.4)	\$ 52.4

(1) Includes contracts actively quoted and contracts valued from other external sources.

We manage our mark-to-market risk on a portfolio basis based upon the delivery period of our contracts and the individual components of the risks within each contract. Accordingly, we record and manage the energy purchase and sale obligations under our contracts in separate components based upon the commodity (e.g., electricity or gas), the product (e.g., electricity for delivery during peak or off-peak hours), the delivery location (e.g., by region), the risk profile (e.g., forward or option), and the delivery period (e.g., by month and year).

Consistent with our risk management practices, we have presented the information in the table above based upon the ability to obtain reliable prices for components of the risks in our contracts from external sources rather than on a contract-by-contract basis. Thus, the portion of long-term contracts that is valued using external price sources is presented under the caption "prices provided by external sources." This is consistent with how we manage our risk, and we believe it provides the best indication of the basis for the valuation of our portfolio. Since we manage our risk on a portfolio basis rather than contract-by-contract, it is not practicable to determine separately the portion of long-term contracts that is included in each valuation category. We describe the commodities, products, and delivery periods included in each valuation category in detail below.

The amounts for which fair value is determined using prices provided by external sources represent the portion of forward, swap, and option contracts for which price quotations are available through brokers or over-the-counter transactions. The term for which such price information is available varies by commodity, region, and product. The fair values included in this category are the following portions of our contracts:

- ◆ forward purchases and sales of electricity during peak and off-peak hours for delivery terms primarily through 2006, but up to 2008, depending upon the region,
- ◆ options for the purchase and sale of electricity during peak hours for delivery terms through 2005, depending upon the region,
- ◆ forward purchases and sales of electric capacity for delivery terms through 2006,
- ◆ forward purchases and sales of natural gas, coal and oil for delivery terms through 2008, and
- ◆ options for the purchase and sale of natural gas, coal and oil for delivery terms through 2006.

The remainder of the net mark-to-market energy asset is valued using models. The portion of contracts for which such techniques are used includes standard products for which external prices are not available and customized products that are valued using modeling techniques to determine expected future market prices, contract quantities, or both.

Modeling techniques include estimating the present value of cash flows based upon underlying contractual terms and incorporate, where appropriate, option pricing models and statistical and simulation procedures. Inputs to the models include:

- ◆ observable market prices,
- ◆ estimated market prices in the absence of quoted market prices,
- ◆ the risk-free market discount rate,
- ◆ volatility factors,
- ◆ estimated correlation of energy commodity prices, and
- ◆ expected generation profiles of specific regions.

Additionally, we incorporate counterparty-specific credit quality and factors for market price and volatility uncertainty and other risks in our valuation. The inputs and factors used to determine fair value reflect management's best estimates.

The electricity, fuel, and other energy contracts we hold have varying terms to maturity, ranging from contracts for delivery the next hour to contracts with terms of ten years or more. Because an active, liquid electricity futures market comparable to that for other commodities has not developed, the majority of contracts used in the wholesale marketing and risk management operation are direct contracts between market participants and are not exchange-traded or financially settling contracts that can be readily liquidated in their entirety through an exchange or other market mechanism. Consequently, we and other market participants generally realize the value of these contracts as cash flows become due or payable under the terms of the contracts rather than through selling or liquidating the contracts themselves.

Consistent with our risk management practices, the amounts shown in the table on the previous page as being valued using prices from external sources include the portion of long-term contracts for which we can obtain reliable prices from external sources. The remaining portions of these long-term contracts are shown in the table as being valued using models. In order to realize the entire value of a long-term contract in a single transaction, we would need to sell or assign the entire contract. If we were to sell or assign any of our long-term contracts in their entirety, we may not realize the entire value reflected in the table. However, based upon the nature of the wholesale marketing and risk management operation, we expect to realize the value of these contracts, as well as any contracts we may enter into in the future to manage our risk, over time as the contracts and related hedges settle in accordance with their terms. We do not expect to realize the value of these contracts and related hedges by selling or assigning the contracts themselves in total.

The fair values in the table represent expected future cash flows based on the level of forward prices and volatility factors as of December 31, 2004 and could change significantly as a result of future changes in these factors. Additionally, because the depth and liquidity of the power markets vary substantially between regions and time periods, the prices used to determine fair value could be affected significantly by the volume of transactions executed.

Management uses its best estimates to determine the fair value of commodity and derivative contracts it holds and sells. These estimates consider various factors including closing exchange and over-the-counter price quotations, time value, volatility factors, and credit exposure. However, future market prices and actual quantities will vary from those used in recording mark-to-market energy assets and liabilities, and it is possible that such variations could be material.

Other

	2004	2003	2002
	<i>(In millions)</i>		
Revenues	\$73.6	\$45.1	\$56.4

Our merchant energy business holds up to a 50% voting interest in 24 operating domestic energy projects that consist of electric generation, fuel processing, or fuel handling facilities. Of these 24 projects, 17 are "qualifying facilities" that receive certain exemptions and pricing under the Public Utility Regulatory Policy Act of 1978 based on the facilities' energy source or the use of a cogeneration process. Earnings from our investments were \$18.0 million in 2004, \$2.1 million in 2003, and \$9.1 million in 2002.

The increase in revenues in 2004 compared to 2003 is primarily due to higher equity in earnings related to our minority investment in a facility that produces synthetic fuel from coal. This increase included \$13.1 million of revenues related to an increased incentive fee and a deferred contingent transaction fee.

The decrease in revenues in 2003 compared to 2002 was due to lower revenues from our California projects because we reversed certain credit reserves that totaled \$9.1 million during the first quarter of 2002, as we began receiving payments from the California utilities, which had a positive impact in 2002, partially offset by a geothermal project generating at a higher capacity in 2003.

At December 31, 2004, our investment in qualifying facilities and domestic power projects consisted of the following:

Book Value at December 31,	2004	2003
	<i>(In millions)</i>	
Project Type		
Coal	\$128.7	\$130.5
Hydroelectric	55.8	57.3
Geothermal	46.3	56.0
Biomass	50.2	51.4
Fuel Processing	22.5	22.5
Solar	10.4	10.5
Total	\$313.9	\$328.2

We believe the current market conditions for our equity-method investments that own geothermal, coal, hydroelectric, and fuel processing projects provide sufficient positive cash flows to recover our investments. We continuously monitor issues that potentially could impact future profitability of these investments, including environmental and legislative initiatives. We discuss certain risks and uncertainties in more detail in our *Forward Looking Statements* section. However, should future events cause these investments to become uneconomic, our investments in these projects could become impaired under the provisions of APB No. 18.

The ability to recover our costs in our equity-method investments that own biomass and solar projects is partially dependent upon subsidies from the State of California. Under the California Public Utility Act, subsidies currently exist in that the California Public Utilities Commission (CPUC) requires electric corporations to identify a separate rate component to fund the development of renewable resources technologies, including solar, biomass, and wind facilities. In addition, legislation in California requires that each electric corporation increase its total procurement of eligible renewable energy resources by at least one percent per year so that 20% of its retail sales are procured from eligible renewable energy resources by 2017. The legislation also requires the California Energy Commission to award supplemental energy payments to electric corporations to cover above-market costs of renewable energy.

Given the need for electric power and the desire for renewable resource technologies, we believe California will continue to subsidize the use of renewable energy to make these projects economical to operate. However, should the California legislation fail to adequately support the renewable energy initiatives, our equity-method investments in these types of projects could become impaired under the provisions of APB No. 18, and any losses recognized could be material. If our strategy were to change from an intent to hold to an intent to sell for any of our equity-method investments in qualifying facilities or power projects, we would need to adjust their book value to fair value, and that adjustment could be material. If we were to sell these investments in the current market, we may have losses that could be material.

Operating Expenses

Our merchant energy business operating expenses increased \$242.5 million in 2004 compared to 2003 mostly due to the following:

- ◆ an increase of \$94.3 million primarily related to higher compensation, benefit, and other inflationary costs, higher Sarbanes-Oxley 404 implementation costs of approximately \$10 million, and higher spending on enterprise-wide information technology infrastructure costs of approximately \$5 million,
- ◆ an increase at our competitive supply operations totaling \$90.1 million mostly because of higher compensation and benefit expense, including an increased number of employees to support the growth of these operations,
- ◆ an increase in expenses due to the June 2004 acquisition of Ginna totaling \$43.1 million, and
- ◆ an increase of \$10.1 million at our Nine Mile Point nuclear facility primarily due to refueling outage and reliability spending.

Our merchant energy business operating expenses increased \$176.1 million in 2003 compared to 2002 mostly due to the following:

- ◆ an increase of \$81.5 million due to the acquisitions of our retail electric operation in September 2002 and retail gas operation in December 2002,
- ◆ an increase of \$22.7 million at Nine Mile Point, including higher costs associated with the refueling outage of Unit 1 in 2003 compared to the 2002 refueling outage of Unit 2. Since we own 100% of Unit 1, we incurred all outage costs compared to 82% of costs for Unit 2,
- ◆ costs of \$17.8 million related to our High Desert facility that commenced operations in the second quarter of 2003,
- ◆ an increase in costs of \$10.3 million related to our wholesale marketing and risk management operation as a result of growth of this operation, and
- ◆ higher compensation, benefit, and other inflationary costs.

These increases were partially offset by cost reductions due to productivity initiatives including our corporate-wide workforce reduction programs.

Workforce Reduction Costs, Impairment Losses and Other Costs, and Net Loss on Sales of Assets

Our merchant energy business recognized expenses associated with our loss on discontinued operations, workforce reduction efforts, impairment losses and other costs, and a net loss on sales of assets as discussed in more detail in *Note 2*.

Depreciation and Amortization Expense

Merchant energy depreciation and amortization expense increased \$18.5 million in 2004 compared to 2003 mostly because of \$10.3 million of depreciation and amortization at Ginna which was acquired in June 2004 and \$5.1 million related to our South Carolina synthetic fuel facility which was acquired in May 2003.

Merchant energy depreciation and amortization expense decreased \$13.3 million in 2003 compared to 2002 mostly because of the adoption of SFAS No. 143. Under SFAS No. 143, a portion of the decommissioning amortization is included as "Accretion of asset retirement obligations" expense beginning in 2003. In addition, beginning in 2003 we no longer include the expected net future costs of removal as a component of depreciation expense. These decreases were partially offset by higher depreciation expense related to new generating facilities that commenced operations in mid-2002 and High Desert that commenced operations in 2003.

Accretion of Asset Retirement Obligations

On January 1, 2003, we adopted SFAS No. 143 that requires the accretion of the asset retirement obligation liability due to the passage of time until the liability is settled. The increase in accretion expense of \$10.5 million in 2004 compared to 2003 is primarily due to \$6.9 million related to Ginna which was acquired in June 2004.

Taxes Other Than Income Taxes

Merchant energy taxes other than income taxes increased \$2.3 million in 2004 compared to 2003 mostly because of \$4.2 million of property taxes at Ginna which was acquired in June 2004, partially offset by lower property taxes at Nine Mile Point.

Merchant energy taxes other than income taxes increased \$19.5 million in 2003 compared to 2002 mostly because of gross receipt taxes associated with our retail electric operation of \$17.5 million and property taxes on new generating facilities.

Regulated Electric Business

Our regulated electric business is discussed in detail in *Item 1. Business—Electric Business* section.

Results	2004	2003	2002
	(In millions)		
Revenues	\$ 1,967.7	\$ 1,921.6	\$ 1,966.0
Electricity purchased for resale expenses	(1,034.0)	(1,023.5)	(1,080.7)
Operations and maintenance expenses	(304.2)	(305.1)	(260.4)
Workforce reduction costs	—	(0.6)	(34.0)
Depreciation and amortization	(194.2)	(181.7)	(174.2)
Taxes other than income taxes	(132.8)	(130.2)	(129.0)
Income from Operations	\$ 302.5	\$ 280.5	\$ 287.7
Net Income	\$ 131.1	\$ 107.5	\$ 99.3
Special Items Included in Operations (after-tax)			
Workforce reduction costs	\$ —	\$ (0.4)	\$ (20.5)

Above amounts include intercompany transactions eliminated in our Consolidated Financial Statements. Note 3 provides a reconciliation of operating results by segment to our Consolidated Financial Statements. Certain prior-year amounts have been reclassified to conform with the current year's presentation.

Net income from the regulated electric business increased in 2004 compared to 2003 mostly because of:

- ◆ increased revenues less electricity purchased for resale expenses of \$21.5 million after-tax in 2004 compared to 2003, which includes \$6.0 million after-tax related to the shareholder return portion of the administrative fee collected under Provider of Last Resort rates,
- ◆ the absence of \$19.4 million after-tax of incremental distribution service restoration expenses associated with Hurricane Isabel in 2003, and
- ◆ lower interest expense of \$10.0 million after-tax.

These favorable results were partially offset by the following:

- ◆ excluding the costs associated with Hurricane Isabel, we had increased operations and maintenance expenses of \$18.9 million after-tax in 2004 compared to 2003 mostly due to higher compensation, benefit, and other inflationary costs, higher uncollectible expenses, Sarbanes-Oxley 404 implementation costs, and increased spending on electric system reliability, and
- ◆ increased depreciation and amortization expense of \$7.6 million after-tax.

Net income from the regulated electric business increased in 2003 compared to 2002 mostly because of:

- ◆ lower workforce reduction costs of \$20.1 million after-tax,
- ◆ lower interest expense of \$19.1 million after-tax, and
- ◆ cost reductions resulting from our corporate-wide workforce reduction programs and other productivity initiatives.

These favorable results were partially offset by distribution service restoration expenses related to Hurricane Isabel and other major storms in 2003. Total distribution service restoration expenses related to Hurricane Isabel were \$22.2 million after-tax, which included \$19.4 million of incremental expenses.

Electric Revenues

The changes in electric revenues in 2004 and 2003 compared to the respective prior year were caused by:

	2004	2003
	<i>(In millions)</i>	
Distribution volumes	\$15.8	\$ 3.0
Standard offer service	26.6	(54.2)
Total change in electric revenues from electric system sales	42.4	(51.2)
Other	3.7	6.8
Total change in electric revenues	\$46.1	\$(44.4)

Distribution Volumes

Distribution volumes are sales to customers in BGE's service territory for the delivery service BGE provides at rates set by the Maryland PSC.

The percentage changes in our electric system distribution volumes, by type of customer, in 2004 and 2003 compared to the respective prior year were:

	2004	2003
Residential	4.4%	0.8%
Commercial	0.9	2.1
Industrial	(8.0)	(3.0)

In 2004, we distributed more electricity to residential customers compared to 2003 mostly due to increased usage per customer, an increased number of customers, and warmer summer weather. We distributed about the same amount of electricity to commercial customers. We distributed less electricity to industrial customers mostly due to lower usage by industrial customers.

In 2003, we distributed about the same amount of electricity to residential customers compared to 2002. We distributed more electricity to commercial customers mostly due to increased usage per customer. We distributed less electricity to industrial customers mostly due to lower usage by industrial customers.

Standard Offer Service

BGE provides standard offer service for customers that do not select an alternative generation supplier as discussed in *Item 1. Business—Electric Regulatory Matters and Competition* section.

Standard offer service revenues increased in 2004 compared to 2003 mostly because of increased distribution volumes to residential customers, partially offset by lower revenues associated with commercial and industrial customers that elected an alternative supplier beginning July 1, 2004. Standard offer service revenues decreased in 2003 compared to 2002 mostly because a majority of BGE's large commercial and industrial customers left standard offer service in the second quarter of

2002 and elected other electric generation suppliers. In 2003, these decreased revenues were partially offset by an increase in the standard offer service rate that BGE charges its customers.

Electricity Purchased for Resale Expenses

BGE's actual costs of electricity purchased for resale expenses increased in 2004 compared to 2003 mostly due to increased sales to residential customers, partially offset by lower electricity purchased for resale expenses associated with commercial and industrial customers that elected an alternative supplier beginning July 1, 2004. Electricity purchased for resale expenses decreased in 2003 compared to 2002 mostly because large commercial and industrial customers left BGE's standard offer service in the second quarter of 2002 and elected other electric generation suppliers.

Electric Operations and Maintenance Expenses

Regulated electric operations and maintenance expenses were about the same in 2004 compared to 2003. Hurricane Isabel caused \$32.1 million of incremental distribution service restoration expenses in 2003. Other operations and maintenance expenses increased \$31.2 million in 2004 compared to 2003. This increase was mostly due to:

- ◆ an increase in compensation, benefit, and other inflationary costs,
- ◆ a \$9.0 million increase in uncollectible expenses,
- ◆ approximately \$4 million related to Sarbanes-Oxley 404 implementation costs, and
- ◆ approximately \$4 million in spending on electric systems reliability.

Regulated electric operations and maintenance expenses increased \$44.7 million in 2003 compared to 2002 mostly because of distribution service restoration expenses related to Hurricane Isabel of \$36.8 million, which includes \$4.7 million of non-incremental labor expenses, and distribution service restoration expenses related to other major storms. This increase also reflects higher compensation, benefit, and other inflationary costs, partially offset by lower uncollectible expenses and cost reductions resulting from our corporate-wide workforce reduction programs and other productivity initiatives.

Workforce Reduction Costs

BGE's electric business recognized expenses associated with our workforce reduction efforts as discussed in *Note 2*.

Electric Depreciation and Amortization Expense

Regulated electric depreciation and amortization expense increased \$12.5 million in 2004 compared to 2003 mostly because of \$7.6 million related to accelerated amortization expense associated with the replacement of information technology assets and \$4.9 million related to additional property placed in service.

Regulated electric depreciation and amortization expense increased \$7.5 million in 2003 compared to 2002 mostly because of accelerated amortization associated with the replacement of information technology assets.

Regulated Gas Business

All BGE customers have the option to purchase gas from other suppliers. To date, customer choice has not had a material effect on our, or BGE's, financial results.

Results	2004	2003	2002
	<i>(In millions)</i>		
Revenues	\$ 757.0	\$ 726.0	\$ 581.3
Gas purchased for resale expenses	(484.3)	(445.8)	(316.7)
Operations and maintenance expenses	(123.6)	(101.1)	(106.2)
Workforce reduction costs	—	(0.1)	(1.3)
Depreciation and amortization	(48.1)	(46.6)	(47.4)
Taxes other than income taxes	(32.1)	(27.9)	(31.1)
Income from Operations	\$ 68.9	\$ 104.5	\$ 78.6
Net Income	\$ 22.2	\$ 43.0	\$ 31.1
<i>Special Items Included in Operations (after-tax)</i>			
Workforce reduction costs	\$ —	\$ (0.1)	\$ (0.8)

Above amounts include intercompany transactions eliminated in our Consolidated Financial Statements. Note 3 provides a reconciliation of operating results by segment to our Consolidated Financial Statements. Certain prior-year amounts have been reclassified to conform with the current year's presentation.

Net income from our regulated gas business decreased during 2004 compared to 2003 mostly because of:

- ◆ increased operations and maintenance expenses of \$13.6 million after-tax mostly due to increased compensation, benefit, and other inflationary costs, higher uncollectible expenses, and Sarbanes-Oxley 404 implementation costs,
- ◆ the absence of a \$4.7 million after-tax recovery of a previously disallowed regulatory asset following an order issued by the Maryland PSC that had a positive impact in 2003, and
- ◆ the absence of \$2.2 million after-tax of property tax refund claims by the State of Maryland resulting from a reclassification of gas distribution pipeline from real property to personal property that had a positive impact in 2003.

Net income from our regulated gas business increased during 2003 compared to 2002 mostly because of:

- ◆ a \$4.7 million after-tax recovery of a previously disallowed regulatory asset following an order issued by the Maryland PSC, and
- ◆ the approval of \$2.2 million after-tax of property tax refund claims by the State of Maryland resulting from a reclassification of gas distribution pipeline from real property to personal property.

Gas Revenues

The changes in gas revenues in 2004 and 2003 compared to the respective prior year were caused by:

	2004	2003
	<i>(In millions)</i>	
Distribution volumes	\$ (7.2)	\$ 21.6
Base rates	(0.1)	(1.3)
Weather normalization	5.4	(18.9)
Gas cost adjustments	40.5	132.4
Total change in gas revenues from gas system sales	38.6	133.8
Off-system sales	(7.6)	10.0
Other	—	0.9
Total change in gas revenues	\$31.0	\$144.7

Distribution Volumes

The percentage changes in our distribution volumes, by type of customer, in 2004 and 2003 compared to the respective prior year were:

	2004	2003
Residential	(5.1)%	13.8%
Commercial	10.1	7.6
Industrial	(22.3)	(21.5)

We distributed less gas to residential customers during 2004 compared to 2003 mostly due to milder winter weather and lower usage per customer. We distributed more gas to commercial customers mostly due to increased usage and an increased number of customers. We distributed less gas to industrial customers mostly due to lower usage per customer.

We distributed more gas to residential and commercial customers during 2003 compared to 2002 mostly due to colder winter weather, an increased number of customers, and increased usage per customer. We distributed less gas to industrial customers mostly due to decreased usage per customer.

Weather Normalization

The Maryland PSC allows us to record a monthly adjustment to our gas distribution revenues to eliminate the effect of abnormal weather patterns on our gas distribution volumes. This means our monthly gas distribution revenues are based on weather that is considered "normal" for the month and, therefore, are not affected by actual weather conditions.

Gas Cost Adjustments

We charge our gas customers for the natural gas they purchase from us using gas cost adjustment clauses set by the Maryland PSC as described in *Note 1*. However, under the market-based rates mechanism approved by the Maryland PSC, our actual cost of gas is compared to a market index (a measure of the market price of gas in a given period). The difference between our actual cost and the market index is shared equally between shareholders and customers.

Customers who do not purchase gas from BGE are not subject to the gas cost adjustment clauses because we are not selling gas to them. However, these customers are charged base rates to recover the costs BGE incurs to deliver their gas through our distribution system, and are included in the gas distribution volume revenues.

Gas cost adjustment revenues increased during 2004 compared to 2003 because we sold gas at a higher price partially offset by less gas sold. Gas cost adjustment revenues increased during 2003 compared to 2002 because we sold more gas at a higher price.

In December 2002, a Hearing Examiner from the Maryland PSC issued a proposed order disallowing \$7.7 million of a previously established regulatory asset for certain credits that were over-refunded to customers through our market-based rates. BGE reserved the \$7.7 million of disallowed fuel costs in the fourth quarter of 2002. In August 2003, the Maryland PSC issued an order authorizing us to recover the \$7.7 million and we reinstated the regulatory asset.

Off-System Sales

Off-system gas sales are low-margin direct sales of gas to wholesale suppliers of natural gas outside our service territory. Off-system gas sales, which occur after BGE satisfied its customers' demand, are not subject to gas cost adjustments. The Maryland PSC approved an arrangement for part of the margin from off-system sales to benefit customers (through reduced costs) and the remainder to be retained by BGE (which benefits shareholders). Changes in off-system sales do not significantly impact earnings.

Revenues from off-system gas sales decreased during 2004 compared to 2003 mostly because of less gas sold.

Revenues from off-system gas sales increased during 2003 compared to 2002 because we sold gas at a higher price, partially offset by less gas sold.

Gas Purchased For Resale Expenses

Gas purchased for resale expenses include the cost of gas purchased for resale to our customers and for off-system sales. These costs do not include the cost of gas purchased by delivery service only customers.

Gas costs increased during 2004 as compared to 2003 mostly because of higher average gas prices and the \$7.7 million recovery of disallowed fuel-related costs recognized in 2003 that had a positive impact in that period as previously discussed in the *Gas Cost Adjustments* section.

Gas costs increased during 2003 as compared to 2002 mostly because we purchased more gas at a higher price.

Gas Operations and Maintenance Expenses

Regulated gas operations and maintenance expenses increased \$22.5 million during 2004 compared to 2003 mostly because of:

- ◆ an increase in compensation, benefit, and other inflationary expenses,
- ◆ a \$5.4 million increase in uncollectible expenses, and
- ◆ approximately \$1 million related to Sarbanes-Oxley 404 implementation costs.

Regulated gas operations and maintenance expenses decreased \$5.1 million during 2003 compared to 2002 mostly because of lower uncollectible expenses and cost reductions resulting from our corporate-wide workforce reduction programs and other productivity initiatives.

Workforce Reduction Costs

BGE's gas business recognized expenses associated with our workforce reduction efforts as discussed in *Note 2*.

Other Nonregulated Businesses

Results

	2004	2003	2002
	<i>(In millions)</i>		
Revenues	\$ 422.0	\$ 587.9	\$ 537.4
Operating expenses	(353.4)	(535.8)	(505.9)
Workforce reduction costs	—	(0.2)	(1.0)
Impairment losses and other costs	(3.7)	(0.6)	(10.8)
Depreciation and amortization	(35.2)	(21.2)	(16.6)
Taxes other than income taxes	(2.5)	(3.3)	(4.3)
Net (loss) gain on sales of investments and other assets	(1.2)	26.2	265.0
Income from Operations	\$ 26.0	\$ 53.0	\$ 263.8
Net (Loss) Income	\$ (3.5)	\$ 12.2	\$ 148.0
<i>Special Items Included In Operations (after-tax)</i>			
Impairment of real estate, senior-living, and other investments	\$ (2.2)	\$ (0.4)	\$ (1.2)
Net (loss) gain on sales of investments and other assets	(0.6)	16.4	169.1
Workforce reduction costs	—	(0.1)	(0.7)
Costs associated with exit of BGE Home merchandise stores	—	—	(6.1)
Total Special Items	\$ (2.8)	\$ 15.9	\$ 161.1

Above amounts include intercompany transactions eliminated in our Consolidated Financial Statements. Note 3 provides a reconciliation of operating results by segment to our Consolidated Financial Statements.

Net income from our other nonregulated businesses decreased \$15.7 million during 2004 compared to 2003 mostly because of a \$16.4 million net gain on sales of investments and other assets in 2003 that had a positive impact in that period.

Net income from our other nonregulated businesses decreased \$135.8 million during 2003 compared to 2002 mostly because we recognized a \$163.3 million after-tax gain on the sale of our investment in Orion in 2002 that had a positive impact in that period. This decrease was partially offset by the following 2003 transactions:

- ◆ a \$13.1 million pre-tax gain on the sale of several parcels of real estate,

- ◆ a \$9.5 million pre-tax charge associated with the exit of BGE Home merchandise stores in 2002 which had a negative impact in that period,
- ◆ a \$7.2 million pre-tax gain on the sale of an oil tanker to the U.S. Navy,
- ◆ a \$5.3 million pre-tax gain on the favorable settlement of a contingent obligation we had previously reserved relating to the sale of our Guatemalan power plant operation in the fourth quarter of 2001,
- ◆ a \$0.6 million pre-tax gain on the sale of financial investments, and
- ◆ improved results from our international portfolio.

In 2001, we decided to sell certain non-core assets and accelerate the exit strategies on other assets that we continued to hold and own. These assets included approximately 1,300 acres of land holdings in various stages of development located in seven sites in the central Maryland region, an operating waste water treatment plant located in Anne Arundel County, Maryland, all of our 18 senior-living facilities and certain international power projects. At December 31, 2004, our remaining land holdings totaled approximately 190 acres with a carrying value of approximately \$29 million recorded in our Consolidated Balance Sheets. We also initiated a liquidation program for our financial investments operation in 2001. As of December 31, 2004, we have substantially liquidated our investment portfolio and have approximately \$6 million in non-core financial investments recorded in our Consolidated Balance Sheets.

In 2005, we began to market our Panamanian distribution facility and our investment in a fund that owns interests in two South American energy projects, with an expectation of completing a sale by the end of the year. We do not expect that the sale of these assets will have a material impact on our financial results.

While our intent is to dispose of these remaining non-core assets, market conditions and other events beyond our control may affect the actual sale of these assets. In addition, a future decline in the fair value of these assets could result in losses that could have a material impact on our financial results.

Consolidated Nonoperating Income and Expenses

Other Income

Other income decreased \$5.0 million during 2004 as compared to 2003 mostly because of higher earnings from consolidated investments where our ownership is less than 100%, which resulted in increased minority interest expense. Other income decreased \$11.4 million during 2003 as compared to 2002 mostly because of lower interest income on temporary cash investments of \$6.1 million and higher earnings from consolidated investments where our ownership is less than 100%, which resulted in increased minority interest expense of \$4.0 million.

Other income for BGE decreased \$16.1 million in 2003 as compared to 2002 mostly because of an increase in charitable contributions of \$7.5 million and because of lower interest income of \$5.0 million on temporary cash investments in the Constellation Energy cash pool.

Fixed Charges

Total fixed charges decreased \$9.9 million during 2004 as compared to 2003 mostly because of a lower level of debt outstanding and the benefit of lower interest rates due to interest rate swaps entered into during the third quarter of 2004. We discuss these interest rate swaps in more detail in *Note 13*.

Total fixed charges increased \$58.7 million during 2003 compared to 2002 mostly because we had lower capitalized interest of \$30.2 million due to our new generating facilities commencing operations and \$28.5 million related to a higher level of debt outstanding, including the issuance of \$550 million of debt in June 2003 that was used to refinance the High Desert facility lease.

Total fixed charges for BGE decreased \$15.0 million during 2004 compared to 2003 mostly because of a lower level of debt outstanding. Total fixed charges for BGE decreased \$29.4 million during 2003 compared to 2002 mostly because of a lower level of debt outstanding and lower interest rates.

Income Taxes

The differences in income taxes result from a combination of the changes in income and the impact of the recognition of tax credits on the effective tax rate. We include an analysis of the changes in the effective tax rate and discuss in more detail the tax credits related to our South Carolina synthetic fuel facility in *Note 10*.

Pension Expense

Our actual return on our qualified pension plan assets was 11.6% for the year ended December 31, 2004. We assume an expected return on pension plan assets of 9% for the purpose of computing annual net periodic pension expense in accordance with SFAS No. 87, *Employers' Accounting for Pensions*. Differences between actual and expected returns are deferred along with other actuarial gains and losses and reflected in future net periodic pension expense in accordance with SFAS No. 87. Expected and actual returns on pension assets also are affected by plan contributions.

We contributed an additional \$50 million to our pension plans in March 2005, even though there is no IRS minimum contribution for 2005. At December 31, 2004, we recorded an after-tax charge to equity of \$42.6 million as a result of increasing our additional minimum pension liability. We discuss our pension plans in more detail in *Note 7*.

Financial Condition

Cash Flows

The following table summarizes our 2004 cash flows by business segment, as well as our consolidated cash flows for 2004, 2003, and 2002.

	2004 Segment Cash Flows			Consolidated Cash Flows		
	Merchant	Regulated	Other	2004	2003	2002
	<i>(In millions)</i>

*Items are not allocated to the business segments because they are managed for the company as a whole.

Cash Flows from Operating Activities

Cash provided by operating activities was \$1,086.8 million in 2004 compared to \$1,057.8 million in 2003 and \$1,005.8 million in 2002. Net income was higher by \$262.4 million in 2004 compared to 2003. Non-cash adjustments to net income were \$29.2 million lower in 2004 compared to 2003. The decrease in non-cash adjustments to net income was primarily due to the cumulative effects of changes in accounting principles of \$198.4 million as a result of the adoption of SFAS No. 143 and EITF 02-3 in 2003, which had the effect of reducing net income in 2003 but were non-cash transactions. This decrease in non-cash adjustments to net income was offset in part by the following increases in non-cash adjustments in 2004:

- ◆ higher depreciation and amortization and accretion of asset retirement obligations of \$60 million,
- ◆ the loss from discontinued operations of \$49 million,
- ◆ an increase in deferred income taxes of \$14 million, and

- ◆ a decrease in the net gain on sales of investments and other assets of \$27 million primarily due to the sale of financial and real estate investments in 2003. We adjust net income to exclude these gains and reflect the proceeds from these sales in the investing activities section.

Changes in working capital had a negative impact of \$329.6 million on cash flow from operations in 2004 compared to a negative impact of \$65.3 million in 2003. The \$264.3 million decrease was primarily due to the following uses of cash in 2004 compared to 2003:

- ◆ a decline in working capital related to accrued taxes of approximately \$254 million in 2004 compared to 2003 due to higher income tax payments in 2004 compared to refunds of taxes in 2003 and due to the timing of income tax accruals in 2004 compared to 2003,
- ◆ a \$77 million unfavorable change in working capital relating to our accounts receivable and accounts payable primarily due to increased volumes associated with our merchant energy business and the termination of an accounts receivable securitization program in 2004, and

- ◆ an unfavorable change of approximately \$49 million relating to fuel stocks during 2004 primarily due to higher gas and coal prices, which affected inventory levels at BGE and our merchant energy business.

These items were partially offset by a \$111 million source of cash in 2004 compared to 2003 primarily due to other favorable working capital changes as a result of higher accrued expenses in 2004 compared to 2003.

Cash provided by operating activities was \$1,057.8 million in 2003 compared to \$1,005.8 million in 2002. Non-cash adjustments to net income were \$343.5 million higher in 2003 compared to 2002. The increase in non-cash adjustments to net income was primarily due to the following:

- ◆ cumulative effects of changes in accounting principles of \$198.4 million as a result of the adoption of SFAS No. 143 and EITF 02-3 in 2003, which had the effect of reducing net income but were non-cash transactions, and
- ◆ a decrease in the net gain on sales of investments and other assets of \$235.1 million primarily due to the sale of our investment in Orion in 2002.

These increases in non-cash adjustments to net income were offset in part by lower accruals for workforce reduction costs of \$60.7 million in 2003 compared to 2002.

Changes in working capital had a negative impact of \$65.3 million on cash flow from operations in 2003 compared to a positive impact of \$49.0 million in 2002. The \$114.3 million decrease was primarily due to the following uses of cash in 2003 compared to 2002:

- ◆ an increase in cash in 2002 due to the collection of approximately \$85 million related to prepaid expenses and collateral at our retail electric operation subsequent to our acquisition,
- ◆ a decline in accrued interest of approximately \$50 million in 2003 compared to 2002 due to a shift in the timing of interest payments as a result of financings in 2002,
- ◆ an increase of approximately \$40 million in fuel stocks and materials and supplies during 2003 primarily due to higher gas prices, which affected BGE's inventory levels, and
- ◆ an increase of approximately \$54 million in our accounts receivable balance primarily related to our merchant energy business as a result of increased business and High Desert commencing operations in 2003.

These items were partially offset by a source of cash in 2003 compared to 2002 due to an increase in accrued income taxes.

Cash Flows from Investing Activities

Cash used in investing activities was \$1,152.7 million in 2004 compared to \$1,160.3 million in 2003 and \$305.6 million in 2002. Cash used in investing activities in 2004 was about the same as in 2003 primarily due to the decrease in cash used for acquisitions and proceeds from the sale of discontinued operations in 2004, substantially offsetting increased spending on

property, plant and equipment and a decrease in cash proceeds from the sale of investments and other assets in 2004 compared to 2003.

The \$854.7 million increase in cash used in investing activities in 2003 compared to 2002 was primarily due to a decrease in cash proceeds from the sales of investments and other assets in 2003 because of the sale of Orion and Corporate Office Property Trust that generated \$555.4 million in 2002. We discuss our sale of Orion in *Note 2*. In addition, acquisitions were \$325.2 million higher in 2003 due to the refinancing of the High Desert lease, partially offset by a decline in other acquisitions from 2002.

Cash Flows from Financing Activities

Cash provided by financing activities was \$50.9 million in 2004 compared to \$208.8 million in 2003. The decrease in 2004 compared to 2003 was mostly due to a lower issuance of net debt in 2004 (gross proceeds less debt repayments), partially offset by higher proceeds from common stock issuances and acquired contracts in 2004. We discuss cash flows from customer contract restructurings in more detail below.

Cash provided by financing activities increased \$366.4 million in 2003 compared to 2002 mostly due to higher net issuances of debt in 2003 compared to 2002.

Cash Flows from Customer Contract Restructurings

During 2004, our merchant energy business entered into several power agreements to help customers restructure their businesses, which generate significant cash flows at the inception of the contracts. These agreements have a contract price that differs from current market prices, which results in cash payments from the counterparty at the inception of the contract. We received \$117.5 million in 2004 for one contract reflected in cash flows from financing activities in our Consolidated Statements of Cash Flows. We received an additional \$157.2 million for a second contract in March 2005. We expect to receive approximately \$70 million in the first half of 2005 for another contract that was entered into during 2004, contingent upon the receipt of all regulatory and other approvals and the closing of the transaction.

Security Ratings

Independent credit-rating agencies rate Constellation Energy's and BGE's fixed-income securities. The ratings indicate the agencies' assessment of each company's ability to pay interest, distributions, dividends, and principal on these securities. These ratings affect how much it will cost each company to sell these securities. The better the rating, the lower the cost of the securities to each company when they sell them.

The factors that credit rating agencies consider in establishing Constellation Energy's and BGE's credit ratings include, but are not limited to, cash flows, liquidity, business risk profile, and the amount of debt as a component of total capitalization. In March 2004, Standard & Poors rating group reduced Constellation Energy's and BGE's corporate credit rating from A- to BBB+ and reduced certain other ratings to the levels noted in the table on the next page. In October 2004, Fitch-

Ratings affirmed Constellation Energy's and BGE's credit ratings. All Constellation Energy and BGE credit ratings have stable outlooks. At the date of this report, our credit ratings were as follows:

	Standard & Poors Rating Group	Moody's Investors Service	Fitch- Ratings
Constellation Energy			
Commercial Paper	A-2	P-2	F-2
Senior Unsecured Debt*	BBB	Baa1	A-
BGE			
Commercial Paper	A-2	P-1	F-1
Mortgage Bonds	A	A1	A+
Senior Unsecured Debt	BBB+	A2	A
Trust Preferred Securities*	BBB-	A3	A-
Preference Stock*	BBB-	Baa1	A-

* In March 2004, Standard & Poors rating group reduced the rating one level to this current rating.

Available Sources of Funding

We continuously monitor our liquidity requirements and believe that our credit facilities and access to the capital markets provide sufficient liquidity to meet our business requirements. We discuss our available sources of funding in more detail below.

Constellation Energy

In addition to our cash balance, we have a commercial paper program under which we can issue short-term notes to fund our subsidiaries. At December 31, 2004, we had approximately \$2.2 billion of credit under several facilities.

In June 2004, Constellation Energy arranged an \$800.0 million three-year revolving credit facility and a \$300.0 million five-year revolving credit facility replacing a \$447.5 million 364-day revolving credit facility, which expired in the second quarter of 2004. We also have an existing \$640 million revolving credit facility expiring in June 2005 and a \$447.5 million facility expiring in June 2006.

We use these facilities to ensure adequate liquidity to support our operations. We can borrow directly from the banks or use the facilities to allow the issuance of commercial paper. Additionally, we use the multi-year facilities to support letters of credit primarily for our merchant energy business.

These revolving credit facilities allow the issuance of letters of credit up to approximately \$2.2 billion. In addition, BGE maintains \$200.0 million in credit facilities as discussed below. At December 31, 2004, letters of credit that totaled \$809.9 million were issued under all of our facilities.

In October 2004, we terminated certain loans under other revolving credit agreements of \$41.4 million related to our Panamanian distribution facility. We replaced these revolving credit agreements with loans under new revolving credit agreements totaling \$100.0 million.

We expect to fund future acquisitions with an overall goal of maintaining a strong investment grade credit profile. We funded our June 2004 acquisition of Ginna with a mix of cash and equity. On July 1, 2004, we issued 6.0 million shares of common stock for net proceeds of \$226.9 million to fund a portion of the acquisition of Ginna. We discuss our acquisition of Ginna in more detail in *Note 15*.

BGE

During 2004, certain credit facilities expired and BGE renewed those facilities. BGE continues to maintain \$200.0 million in annual committed credit facilities, expiring May through November 2005, to ensure adequate liquidity to support its operations. We can borrow directly from the banks or use the facilities to allow commercial paper to be issued. As of December 31, 2004, BGE had no outstanding commercial paper, which results in \$200.0 million in unused credit facilities.

Other Nonregulated Businesses

BGE Home Products & Services' program to sell up to \$50 million of receivables was not extended beyond the March 2004 expiration date. During 2004, this receivables program was fully liquidated.

If we can get a reasonable value for our remaining real estate projects and other investments, additional cash may be obtained by selling them. Our ability to sell or liquidate assets will depend on market conditions, and we cannot give assurances that these sales or liquidations could be made.

Capital Resources

Our actual consolidated capital requirements for the years 2002 through 2004, along with the estimated annual amount for 2005, are shown in the table on the next page.

We will continue to have cash requirements for:

- ◆ working capital needs,
- ◆ payments of interest, distributions, and dividends,
- ◆ capital expenditures, and
- ◆ the retirement of debt and redemption of preference stock.

Capital requirements for 2005 and 2006 include estimates of spending for existing and anticipated projects. We continuously review and modify those estimates. Actual requirements may vary from the estimates included in the table on the next page because of a number of factors including:

- ◆ regulation, legislation, and competition,
- ◆ BGE load requirements,
- ◆ environmental protection standards,
- ◆ the type and number of projects selected for construction or acquisition,
- ◆ the effect of market conditions on those projects,
- ◆ the cost and availability of capital,
- ◆ the availability of cash from operations, and
- ◆ business decisions to invest in capital projects.

Our estimates are also subject to additional factors. Please see the *Forward Looking Statements* section.

	2002	2003	2004	2005
	<i>(In millions)</i>			
Nonregulated Capital Requirements:				
Merchant energy (excludes acquisitions)				
Construction program	\$122	\$ —	\$ —	\$ —
Generation plants	236	175(A)	182	180
Nuclear fuel	122	59	133	125
Environmental controls	66	12	—	5
Portfolio acquisitions/investments	51	51	11	140
Technology/other	44	122	129	125
Total merchant energy capital requirements	641	419	455	575
Other nonregulated capital requirements	65	53	42	35
Total nonregulated capital requirements	706	472	497	610
Regulated Capital Requirements:				
Regulated electric	167	236	209	250
Regulated gas	50	53	56	55
Total regulated capital requirements	217	289	265	305
Total capital requirements	\$923	\$761	\$762	\$915

(A) The table above does not include the capital requirements and financing costs of approximately \$40 million for the High Desert Power Project for the six months ended June 30, 2003. We discuss the acquisition of the High Desert Power Project in *Note 15*.

The above amounts do not include the acquisition of Ginna but do include post-acquisition capital requirements for Ginna. We discuss the acquisition of Ginna in more detail in *Note 15*.

As of the date of this report, we have not completed our 2006 capital budgeting process, but expect our 2006 capital requirements to be approximately \$950 million.

Our environmental controls capital requirements are affected by new rules or regulations that require modifications to our facilities. As a result of regulatory or legislative proposals, we expect more stringent air emission standards to be adopted and if promulgated as expected we will install additional air emission control equipment at our coal-fired generating facilities in Maryland and at co-owned coal-fired generating facilities in Pennsylvania. If these rules are promulgated as we have assumed in our projections, there would be another \$400-\$500 million of capital spending from 2008-2010. We discuss environmental matters in more detail in *Item 1. Business—Environmental Matters*.

Capital Requirements

Merchant Energy Business

Our merchant energy business' capital requirements consist of its continuing requirements, including expenditures for:

- ◆ improvements to generating plants,
- ◆ nuclear fuel costs,

- ◆ upstream gas investments,
- ◆ portfolio acquisitions and other investments,
- ◆ costs of complying with the Environmental Protection Agency (EPA), Maryland, and Pennsylvania nitrogen oxides (NOx) and sulfur dioxide (SO₂) emissions regulations, and
- ◆ enhancements to our information technology infrastructure.

Regulated Electric and Gas

Regulated electric and gas construction expenditures primarily include new business construction needs and improvements to existing facilities, including projects to improve reliability. Capital requirements for 2003 in the table above include \$32.0 million in costs incurred as a result of Hurricane Isabel to restore the electric distribution system.

Funding for Capital Requirements

Merchant Energy Business

Funding for the expansion of our merchant energy business is expected from internally generated funds. We also have available sources from commercial paper issuances, issuances of long-term debt and equity, leases, and other financing activities.

The projects that our merchant energy business develops typically require substantial capital investment. Many of the qualifying facilities and independent power projects that we have an interest in are financed primarily with non-recourse debt that is repaid from the project's cash flows. This debt is collateralized by interests in the physical assets, major project contracts and agreements, cash accounts and, in some cases, the ownership interest in that project.

We expect to fund acquisitions with a mixture of debt and equity with an overall goal of maintaining a strong investment grade credit profile.

Regulated Electric and Gas

Funding for regulated electric and gas capital expenditures is expected from internally generated funds. During 2005, we expect our regulated business to generate sufficient cash flows from operations to meet BGE's operating requirements. If necessary, additional funding may be obtained from commercial paper issuances, available capacity under credit facilities, the issuance of long-term debt, trust preferred securities, or preference stock, and/or from time to time equity contributions from Constellation Energy. BGE also participates in a cash pool administered by Constellation Energy as discussed in *Note 16*.

Other Nonregulated Businesses

Funding for our other nonregulated businesses is expected from internally generated funds, commercial paper issuances, issuances of long-term debt of Constellation Energy, sales of securities and assets, and/or from time to time equity contributions from Constellation Energy.

Our ability to sell or liquidate securities and non-core assets will depend on market conditions, and we cannot give assurances that these sales or liquidations could be made. We discuss our remaining non-core assets and market conditions in the *Results of Operations—Other Nonregulated Businesses* section.

Contractual Payment Obligations and Committed Amounts

We enter into various agreements that result in contractual payment obligations in connection with our business activities. These obligations primarily relate to our financing arrangements (such as long-term debt, preference stock, and operating leases), purchases of capacity and energy to support the growth in our merchant energy business activities, and purchases of fuel and transportation to satisfy the fuel requirements of our power generating facilities.

Our total contractual payment obligations as of December 31, 2004 are shown in the following table:

	Payments				
	2005	2006-2007	2008-2009	Thereafter	Total
	(In millions)				
Contractual Payment Obligations					
Long-term debt: ¹					
Nonregulated					
Principal	\$ 314.5	\$ 639.6	\$ 518.3	\$ 2,328.1	\$ 3,800.5
Interest	215.7	398.9	335.0	1,584.2	2,533.8
Total	530.2	1,038.5	853.3	3,912.3	6,334.3
BGE					
Principal	41.6	565.3	307.5	589.2	1,503.6
Interest	87.4	138.6	79.2	809.0	1,114.2
Total	129.0	703.9	386.7	1,398.2	2,617.8
BGE preference stock	—	—	—	190.0	190.0
Operating leases ²	113.2	219.2	74.6	127.9	534.9
Purchase obligations: ³					
Purchased capacity and energy ⁴	794.2	743.3	184.9	157.0	1,879.4
Fuel and transportation ⁵	1,292.0	816.3	142.8	37.3	2,288.4
Other	97.2	63.0	74.9	211.0	446.1
Other noncurrent liabilities:					
Postretirement and postemployment benefits ⁶	36.1	74.3	79.8	185.1	375.3
Other	1.6	—	—	—	1.6
Total contractual payment obligations	\$2,993.5	\$3,658.5	\$1,797.0	\$6,218.8	\$14,667.8

¹ Amounts in long-term debt reflect the original maturity date. Investors may require us to repay \$381.6 million early through put options and remarketing features. Interest on variable rate debt is included based on the December 31, 2004 forward curve for interest rates.

² Our operating lease commitments include future payment obligations under certain power purchase agreements as discussed further in Note 11.

³ Contracts to purchase goods or services that specify all significant terms. Amounts related to certain purchase obligations are based on future purchase expectations which may differ from actual purchases.

⁴ Our contractual obligations for purchased capacity and energy are shown on a gross basis for certain transactions, including both the fixed payment portions of rolling contracts and estimated variable payments under unit-contingent power purchase agreements. We have recorded \$17.4 million of liabilities related to purchased capacity and energy obligations at December 31, 2004 in our Consolidated Balance Sheets.

⁵ We have recorded liabilities of \$16.5 million related to fuel and transportation obligations at December 31, 2004 in our Consolidated Balance Sheets.

⁶ Amounts related to postretirement and postemployment benefits are for unfunded plans and reflect present value amounts consistent with the determination of the related liabilities recorded on the Consolidated Balance Sheets as discussed in Note 7.

The table below presents our contingent obligations. Our contingent obligations increased \$2.6 billion during 2004, primarily due to the issuance of additional letters of credit and guarantees by the parent company for subsidiary obligations to third parties in support of the growth of our merchant energy business. These amounts do not represent incremental consolidated Constellation Energy obligations; rather, they primarily represent parental guarantees of certain subsidiary obligations to third parties. Our calculation of the fair value of subsidiary obligations covered by the \$5,504.2 million of parent company guarantees was \$1,395.6 million at December 31, 2004. Accordingly, if the parent company was required to fund subsidiary obligations, the total amount at current market prices is \$1,395.6 million.

	Expiration				
	2005	2006-2007	2008-2009	Thereafter	Total
	(In millions)				
Contingent Obligations					
Letters of credit	\$ 787.5	\$ 22.4	\$ —	\$ —	\$ 809.9
Guarantees - competitive supply ¹	3,693.4	918.5	314.5	577.8	5,504.2
Other guarantees, net ²	6.7	3.6	15.7	1,236.0	1,262.0
Total contingent obligations	\$4,487.6	\$944.5	\$330.2	\$1,813.8	\$7,576.1

¹ While the face amount of these guarantees is \$5,504.2 million, we would not expect to fund the full amount. In the event the parent were required to fulfill subsidiary obligations, our calculation of the fair value of obligations covered by these guarantees was \$1,395.6 million at December 31, 2004.

² Other guarantees in the above table are shown net of liabilities of \$25.0 million recorded at December 31, 2004 in our Consolidated Balance Sheets.

Liquidity Provisions

In many cases, customers of our merchant energy business rely on the creditworthiness of Constellation Energy. A decline below investment grade by Constellation Energy would negatively impact the business prospects of that operation.

We regularly review our liquidity needs to ensure that we have adequate facilities available to meet collateral requirements. This includes having liquidity available to meet margin requirements for our wholesale marketing and risk management operation and our retail competitive supply activities.

We have certain agreements that contain provisions that would require additional collateral upon credit rating decreases in the senior unsecured debt of Constellation Energy. Decreases in Constellation Energy's credit ratings would not trigger an early payment on any of our credit facilities.

Under counterparty contracts related to our wholesale marketing and risk management operation, we are obligated to post collateral if Constellation Energy's senior unsecured credit ratings declined below established contractual levels. As a result of the ratings action taken by Standard & Poors rating agency in March 2004, we posted approximately \$40 million in additional collateral during the first quarter of 2004 to support our wholesale marketing and risk management operational requirements. We discuss the Standard & Poors rating action in more detail in the *Financial Condition—Securities Ratings* section.

Based on contractual provisions at December 31, 2004, we estimate that if Constellation Energy's senior unsecured debt were downgraded we would have the following additional collateral obligations:

Credit Ratings Downgraded to	Incremental Obligations	Cumulative Obligations
	<i>(In millions)</i>	
BBB-/Baa3	\$13	\$13
Below investment grade	662	675

Based on market conditions and contractual obligations at the time of a downgrade, we could be required to post collateral in an amount that could exceed the amounts specified above, which could be material. At December 31, 2004, we had approximately \$1.6 billion of unused credit facilities and \$706.3 million of cash available to meet potential collateral requirements.

The credit facilities of Constellation Energy and BGE have limited material adverse change clauses that only consider a material change in financial condition and are not directly affected by decreases in credit ratings. If these clauses are invoked, the lending institutions can decline to make new advances or issue new letters of credit, but cannot accelerate the payment of existing amounts outstanding. The long-term debt indentures of Constellation Energy and BGE do not contain material adverse change clauses or financial covenants.

Certain credit facilities of Constellation Energy contain a provision requiring Constellation Energy to maintain a ratio of debt to capitalization equal to or less than 65%. At December 31, 2004, the debt to capitalization ratios as defined in the credit agreements were no greater than 51%. Certain credit agreements of BGE contain provisions requiring BGE to maintain a ratio of debt to capitalization equal to or less than 65%. At December 31, 2004, the debt to capitalization ratio for BGE as defined in these credit agreements was 46%. At December 31, 2004, no amount was outstanding under these agreements.

Failure by Constellation Energy, or BGE, to comply with these provisions could result in the maturity of the debt outstanding under these facilities being accelerated. The credit facilities of Constellation Energy contain usual and customary

cross-default provisions that apply to defaults on debt by Constellation Energy and certain subsidiaries over a specified threshold. Certain BGE credit facilities also contain usual and customary cross-default provisions that apply to defaults on debt by BGE over a specified threshold. The indentures pursuant to which BGE has issued and outstanding mortgage bonds and subordinated debentures provide that a default under any debt instrument issued under the relevant indenture may cause a default of all debt outstanding under such indenture.

Constellation Energy also provides credit support to Calvert Cliffs, Nine Mile Point, and Ginna to ensure these plants have funds to meet expenses and obligations to safely operate and maintain the plants.

We discuss our short-term credit facilities in *Note 8*, long-term debt in *Note 9*, lease requirements in *Note 11*, and commitments and guarantees in *Note 12*.

Off-Balance Sheet Arrangements

For financing and other business purposes, we utilize certain off-balance sheet arrangements that are not reflected in our Consolidated Balance Sheets. Such arrangements do not represent a significant part of our activities or a significant ongoing source of financing. We use these arrangements when they enable us to obtain financing or execute commercial transactions on favorable terms. As of December 31, 2004, we have no material off-balance sheet arrangements including:

- ◆ guarantees with third-parties that are subject to the initial recognition and measurement requirements of FASB Interpretation No. 45, *Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness to Others*,
- ◆ retained interests in assets transferred to unconsolidated entities,
- ◆ derivative instruments indexed to our common stock, and classified as equity, or
- ◆ variable interests in unconsolidated entities that provide financing, liquidity, market risk or credit risk support, or engage in leasing, hedging or research and development services.

We discuss our guarantees in *Note 12*.

Market Risk

We are exposed to various risks, including, but not limited to, energy commodity price and volatility risk, credit risk, interest rate risk, equity price risk, foreign exchange risk, and operations risk. Our risk management program is based on established policies and procedures to manage these key business risks with a strong focus on the physical nature of our business. This program is predicated on a strong risk management culture combined with an effective system of internal controls.

Our Board of Directors and the Audit Committee of the Board oversee the risk management program, including the approval of risk management policies and establishment of risk

limits. We have a Risk Management Department that is responsible for monitoring the key business risks, enforcing compliance with risk management policies and risk limits, as well as managing credit risk. The Risk Management Department reports to the Chief Risk Officer (CRO) who provides regular risk management updates to the Audit Committee and the Board of Directors.

We have a Risk Management Committee (RMC) that is responsible for establishing risk management policies, reviewing procedures for the identification, assessment, measurement and management of risks, and the monitoring and reporting of risk exposures. The RMC meets on a regular basis and is chaired by

the CRO and consists of our Chief Executive Officer, our Chief Financial Officer and Chief Administrative Officer, our Executive Vice President of Corporate Strategy & Development, the President of Constellation Energy Commodities Group, and the President of Constellation Generation Group. In addition, the CRO coordinates with the risk management committees at the major operating subsidiaries that meet regularly to identify, assess, and quantify material risk issues and to develop strategies to manage these risks.

Interest Rate Risk

We are exposed to changes in interest rates as a result of financing through our issuance of variable-rate and fixed-rate debt and certain related interest rate swaps. We may use derivative instruments to manage our interest rate risks.

In July 2004, to optimize the mix of fixed and floating-rate debt, we entered into interest rate swaps relating to \$450 million of our long-term debt. These fair value hedges effectively convert our current fixed-rate debt to a floating-rate instrument tied to the three month London Inter-Bank Offered Rate. Including the \$450 million in interest rate swaps, approximately 15% of our long-term debt is floating-rate.

The following table provides information about our debt obligations that are sensitive to interest rate changes:

Principal Payments and Interest Rate Detail by Contractual Maturity Date

	2005	2006	2007	2008	2009	Thereafter	Total	Fair value at Dec. 31, 2004
	<i>(Dollar amounts in millions)</i>							
Long-term debt								
Variable-rate debt	\$ 8.6	\$100.9	\$ 5.0	\$ 5.0	\$ 10.0	\$ 706.1	\$ 835.6	\$ 835.6
Average interest rate	4.26%	2.57%	5.53%	5.53%	5.53%	3.00%	3.07%	
Fixed-rate debt	\$347.5(A)	\$362.1	\$736.9	\$299.3	\$511.5	\$2,211.2	\$4,468.5	\$4,979.7
Average interest rate	7.61%	5.43%	6.49%	6.28%	6.12%	6.46%	6.43%	

(A) Amount excludes \$381.6 million of long-term debt that contains certain put options under which lenders could potentially require us to repay the debt prior to maturity of which \$124.3 million is classified as current portion of long-term debt in our Consolidated Balance Sheets and in our Consolidated Statements of Capitalization.

Commodity Risk

We are exposed to the impact of market fluctuations in the price and transportation costs of electricity, natural gas, coal, and other commodities. These risks arise from our ownership and operation of power plants, the load-serving activities of BGE standard offer service and our competitive supply activities, and our origination and risk management activities. We discuss these risks separately for our merchant energy and our regulated businesses below.

Merchant Energy Business

Our merchant energy business is exposed to various risks in the competitive marketplace that may materially impact its financial results and affect our earnings. These risks include changes in commodity prices, imbalances in supply and demand, and operations risk.

Commodity Prices

Commodity price risk arises from:

- ◆ the potential for changes in the price of, and transportation costs for, electricity, natural gas, coal, and other commodities,
- ◆ the volatility of commodity prices, and
- ◆ changes in interest rates and foreign exchange rates.

A number of factors associated with the structure and operation of the energy markets significantly influence the level and volatility of prices for energy commodities and related derivative products. We use such commodities and contracts in our merchant energy business, and if we do not properly hedge

the associated financial exposure, this commodity price volatility could affect our earnings. These factors include:

- ◆ seasonal daily and hourly changes in demand,
- ◆ extreme peak demands due to weather conditions,
- ◆ available supply resources,
- ◆ transportation availability and reliability within and between regions,
- ◆ location of our generating facilities relative to the location of our load-serving obligations,
- ◆ procedures used to maintain the integrity of the physical electricity system during extreme conditions, and
- ◆ changes in the nature and extent of federal and state regulations.

These factors can affect energy commodity and derivative prices in different ways and to different degrees. These effects may vary throughout the country as a result of regional differences in:

- ◆ weather conditions,
- ◆ market liquidity,
- ◆ capability and reliability of the physical electricity and gas systems, and
- ◆ the nature and extent of electricity deregulation.

Additionally, we have fuel requirements that are subject to future changes in coal, natural gas, and oil prices. Our power generation facilities purchase fuel under contracts or in the spot market. Fuel prices may be volatile and the price that can be obtained from power sales may not change at the same rate or in the same direction as changes in fuel costs. This could have a material adverse impact on our financial results.

Supply and Demand Risk
 We are exposed to the risk that available sources of supply may differ from the amount of power demanded by our customers under fixed-price load-serving contracts. During periods of high demand, our power supplies may be insufficient to serve our customers' needs and could require us to purchase additional energy at higher prices. Alternatively, during periods of low demand, our power supplies may exceed our customers' needs and could result in us selling that excess energy at lower prices. Either of those circumstances could have a negative impact on our financial results.

We are also exposed to variations in the prices and required volumes of natural gas and coal we burn at our power plants to generate electricity. During periods of high demand on our generation assets, our fuel supplies may be insufficient and could require us to procure additional fuel at higher prices. Alternatively, during periods of low demand on our generation assets, our fuel supplies may exceed our needs, and could result in us selling the excess fuels at lower prices. Either of those circumstances will have a negative impact on our financial results.

Operations Risk
 The risk that a generating plant will not be available to produce energy and the risks related to physical delivery of energy to meet our customers' needs. For 2005, we expect to use the majority of the generating capacity controlled by our merchant energy business to provide standard offer service to BGE or to serve the load requirements of the sellers of Nine Mile Point and Cinna.

If one or more of our generating facilities is not able to produce electricity when required due to operational factors, we may have to forego sales opportunities or fulfill fixed-price sales commitments through the operation of other more costly generating facilities or through the purchase of energy from wholesale market at higher prices. We purchase power from generating facilities we do not own. If one or more of those generating facilities were unable to produce electricity due to operational factors, we may be forced to purchase electricity in the wholesale market at higher prices. This could have a material adverse impact on our financial results.

Our nuclear plants produce electricity at a relatively low marginal cost. The Nine Mile Point and Cinna facilities each sell 90% of output under unit-contingent power purchase agreements (we have no obligation to provide power if the units are not available) to the previous owners. However, if an unplanned outage were to occur at Calvert Cliffs during periods when demand was high, we may have to purchase replacement power at potentially higher prices to meet our obligations, which could have a material adverse impact on our financial results.

Risk Management
 As part of our overall portfolio, we manage the commodity price risk of our competitive supply activities and our electric generation facilities, including power sales, fuel and energy purchases, emission credits, interest rate and foreign currency risks, weather risk, and the market risk of outages. In order to manage these risks, we may enter into fixed-price derivative or non-derivative contracts to hedge the variability in future cash flows from forecasted sales of electricity and purchases of fuel and energy, including:

- ◆ forward contracts, which commit us to purchase or sell energy commodities in the future;
- ◆ futures contracts, which are exchange-traded standardized commitments to purchase or sell a commodity or financial instrument, or to make a cash settlement, at a specific price and future date;
- ◆ swap agreements, which require payments to or from counterparties based upon the differential between two quantities; and
- ◆ option contracts, which convey the right to buy or sell a commodity, financial instrument, or index at a predetermined price.

The objectives for entering into such hedges include:

- ◆ fixing the price for a portion of anticipated future electricity sales at a level that provides an acceptable return on our electric generation operations,
- ◆ fixing the price of a portion of anticipated fuel purchases for the operation of our power plants,
- ◆ fixing the price for a portion of anticipated energy purchases to supply our load-serving customers, and
- ◆ managing our exposure to interest rate risk and foreign currency exchange risks.

The portion of forecasted transactions hedged may vary based upon management's assessment of market, weather, operational, and other factors.

While some of the contracts we use to manage risk represent commodities or instruments for which prices are available from external sources, other commodities and certain contracts are not actively traded and are valued using other pricing sources and modeling techniques to determine expected future market prices, contract quantities, or both. We use our best estimates to determine the fair value of commodity and derivative contracts we hold and sell. These estimates consider various factors including closing exchange and over-the-counter price quotations, time value, volatility factors, and credit exposure. However, it is likely that future market prices could vary from those used in recording market-to-market energy assets and liabilities, and such variations could be material.

We measure the sensitivity of our wholesale marketing and risk management mark-to-market energy contracts to potential changes in market prices using value at risk. Value at risk is a statistical model that attempts to predict risk of loss based on historical market price volatility. We calculate value at risk using a historical variance/covariance technique that models option positions using a linear approximation of their value. Additionally, we estimate variances and correlation using historical commodity price changes over the most recent rolling three-month period. Our value at risk calculation includes all wholesale marketing and risk management mark-to-market energy assets and liabilities, including contracts for energy commodities and derivatives that result in physical settlement and contracts that require cash settlement.

The value at risk calculation does not include market risks associated with activities that are subject to accrual accounting, primarily our generating facilities and our competitive supply load-serving activities. We manage these risks by monitoring our fuel and energy purchase requirements and our estimated contract sales volumes compared to associated supply arrangements. We also engage in hedging activities to manage these risks. We describe those risks and our hedging activities earlier in this section.

The value at risk amounts below represent the potential pre-tax loss in the fair value of our wholesale marketing and risk management mark-to-market energy assets and liabilities over one and ten-day holding periods.

<i>Total Wholesale Value at Risk For the year ended December 31,</i>	2004	2003
	<i>(In millions)</i>	
99% Confidence Level, One-Day Holding Period		
Year end	\$ 4.4	\$ 3.7
Average	3.7	6.6
High	7.8	13.3
Low	2.5	2.7
95% Confidence Level, One-Day Holding Period		
Year end	\$ 3.4	\$ 2.8
Average	2.8	5.0
High	5.9	10.1
Low	1.9	2.1
95% Confidence Level, Ten-Day Holding Period		
Year end	\$10.7	\$ 8.8
Average	9.0	15.9
High	18.7	32.0
Low	6.1	6.5

Based on a 99% confidence interval, we would expect a one-day change in the fair value of the portfolio greater than or equal to the daily value at risk approximately once in every 100 days. In 2004, we experienced four instances where the actual daily mark-to-market change in portfolio value exceeded the predicted value at risk. On average, we expect to experience a change in value to our portfolio greater than our value at risk approximately three times in a calendar year. However, published market studies conclude that exceeding daily value at risk less than seven times in a one-year period is considered consistent with a 99% confidence interval.

The table above is the value at risk associated with our wholesale marketing and risk management operation's mark-to-market energy assets and liabilities, including both trading and non-trading activities. The following table details our value at risk for the trading portion of our wholesale marketing and risk management mark-to-market energy assets and liabilities over a one-day holding period at a 99% confidence level for 2004 and 2003:

<i>Wholesale Trading Value at Risk At December 31,</i>	2004	2003
	<i>(In millions)</i>	
Average	\$2.6	\$ 4.6
High	6.9	10.9

Due to the inherent limitations of statistical measures such as value at risk and the seasonality of changes in market prices, the value at risk calculation may not reflect the full extent of our commodity price risk exposure. Additionally, actual changes in the value of options may differ from the value at risk calculated using a linear approximation inherent in our calculation method. As a result, actual changes in the fair value of mark-to-market energy assets and liabilities could differ from the calculated value at risk, and such changes could have a material impact on our financial results.

Regulated Electric Business

BGE's residential base rates are frozen for a six-year period ending June 30, 2006, and its commercial and industrial base rates were frozen for a four-year period that ended June 30, 2004. The commodity and transmission components of rates are frozen for different time periods depending on the customer type and service options selected by customers.

Our wholesale marketing and risk management operation provided BGE with 100% of the energy and capacity required to meet its commercial and industrial standard offer service obligations through June 30, 2004, and provides 100% of the energy and capacity to meet its residential standard offer service obligations through June 30, 2006. Effective July 1, 2004, BGE executed one and two-year contracts for commercial and industrial electric power supply totaling approximately 2,300 megawatts. Our wholesale marketing and risk management operation will provide a significant portion of this electric power supply.

Bidding to supply BGE's standard offer service to commercial and industrial customers for one, two, or four-year periods beyond June 30, 2004, and to residential customers beyond June 30, 2006, will occur from time to time through a competitive bidding process approved by the Maryland PSC. We discuss standard offer service and the impact on base rates in more detail in *Item 1. Business—Electric Business* section.

BGE may receive performance assurance collateral from suppliers to mitigate suppliers' credit risks in certain circumstances. Performance assurance collateral is designed to protect BGE's potential exposure over the term of the supply contracts and will fluctuate to reflect changes in market prices. In addition to the collateral provisions, there are supplier "step-up" provisions, where other suppliers can step in if the early termination of a Full-Requirements Service Agreement with a supplier should occur, as well as specific mechanisms for BGE to otherwise replace defaulted supplier contracts. All costs incurred by BGE to replace the supply contract are to be recovered from the defaulting supplier or from customers through rates. Finally, BGE's exposure to uncollectible expense or credit risk from customers for the commodity portion of the bill is covered by the administrative fee included in Provider of Last Resort rates.

Regulated Gas Business

Our regulated gas business may enter into gas futures, options, and swaps to hedge its price risk under our market-based rate incentive mechanism and our off-system gas sales program. We

discuss this further in *Note 13*. At December 31, 2004 and 2003, our exposure to commodity price risk for our regulated gas business was not material.

Credit Risk

We are exposed to credit risk, primarily through our merchant energy business. Credit risk is the loss that may result from counterparties' nonperformance. We evaluate the credit risk of our wholesale marketing and risk management operation and our retail competitive supply activities separately as discussed below.

Wholesale Credit Risk

We measure wholesale credit risk as the replacement cost for open energy commodity and derivative transactions (both mark-to-market and accrual) adjusted for amounts owed to or due from counterparties for settled transactions. The replacement cost of open positions represents unrealized gains, net of any unrealized losses, where we have a legally enforceable right of setoff. We monitor and manage the credit risk of our wholesale marketing and risk management operation through credit policies and procedures which include an established credit approval process, daily monitoring of counterparty credit limits, the use of credit mitigation measures such as margin, collateral, or prepayment arrangements, and the use of master netting agreements.

During 2004, we continued to observe declines in the creditworthiness of several major participants in the wholesale energy markets. We continue to actively manage the credit portfolio of our wholesale marketing and risk management operation to attempt to reduce the impact of the general decline in the overall credit quality of the energy industry and the impact of a potential counterparty default. As of December 31, 2004 and 2003, the credit portfolio of our wholesale marketing and risk management operation had the following public credit ratings:

At December 31,	2004	2003
Rating		
Investment Grade ¹	62%	75%
Non-Investment Grade	15	4
Not Rated	23	21

¹ Includes counterparties with an investment grade rating by at least one of the major credit rating agencies. If split rating exists, the lower rating is used.

The reduction in the percentage of counterparties with investment grade ratings to 62% in 2004 is primarily due to continued increased exposure to lower credit quality fuel and power supply counterparties that supply fuel to our power plants and provide power to meet certain customer load-serving requirements.

In addition to the credit ratings provided by the major credit rating agencies, we utilize internal credit ratings to evaluate the creditworthiness of our wholesale customers, including those companies that do not have public credit ratings. The following table provides the breakdown of the credit quality of our wholesale credit portfolio based on our internal credit ratings.

At December 31,	2004	2003
Investment Grade Equivalent	74%	91%
Non-Investment Grade	26	9

A portion of our wholesale credit risk is related to transactions that are recorded in our Consolidated Balance Sheets. These transactions primarily consist of open positions from our wholesale marketing and risk management operation that are accounted for using mark-to-market accounting, as well as amounts owed by wholesale counterparties for transactions that settled but have not yet been paid. The following table highlights the credit quality and exposures related to these activities:

Rating	Total Exposure Before Credit Collateral	Credit Collateral	Net Exposure	Number of Counterparties Greater than 10% of Net Exposure	Net Exposure of Counterparties Greater than 10% of Net Exposure
<i>(Dollars in millions)</i>					
Investment grade	\$ 789	\$ 53	\$ 736	1	\$158
Split rating	6	—	6	—	—
Non-investment grade	215	151	64	—	—
Internally rated—investment grade	225	58	167	—	—
Internally rated—non-investment grade	77	33	44	—	—
Total	\$1,312	\$295	\$1,017	1	\$158

Due to the possibility of extreme volatility in the prices of energy commodities and derivatives, the market value of contractual positions with individual counterparties could exceed established credit limits or collateral provided by those counterparties. If such a counterparty were then to fail to perform its obligations under its contract (for example, fail to deliver the electricity our wholesale marketing and risk management operation had contracted for), we could incur a loss that could have a material impact on our financial results.

Additionally, if a counterparty were to default and we were to liquidate all contracts with that entity, our credit loss would include the loss in value of mark-to-market contracts, the amount owed for settled transactions, and additional payments, if any, that we would have to make to settle unrealized losses on accrual contracts.

Retail Credit Risk

We are exposed to retail credit risk through our competitive electricity and natural gas supply activities which serve commercial and industrial companies. Retail credit risk results when customers default on their contractual obligations. This risk represents the loss that may be incurred due to the nonpayment of a customer's accounts receivable balance, as well as the loss from the resale of energy previously committed to serve the customer.

Retail credit risk is managed through established credit policies, monitoring customer exposures, and the use of credit mitigation measures such as letters of credit or prepayment arrangements.

Our retail credit portfolio is well diversified with no significant company or industry concentrations. During 2004, we did not experience a material change in the credit quality of our retail credit portfolio compared to 2003. Retail credit quality is dependent on the economy and the ability of our customers to manage through unfavorable economic cycles and other market changes. If the business environment were to be negatively affected by changes in economic or other market conditions, our retail credit risk may be adversely impacted.

Foreign Currency Risk

Our merchant energy business is exposed to the impact of foreign exchange rate fluctuations. This foreign currency risk arises from our activities in countries where we transact in currencies other than the U.S. dollar. In 2004, our exposure to foreign currency risk was not material. However, we expect our foreign currency exposure to grow due to our Canadian presence and international coal operations. We manage our exposure to foreign currency exchange rate risk using a comprehensive foreign currency hedging program. While we cannot predict currency fluctuations, the impact of foreign currency exchange rate risk could be material.

Equity Price Risk

We are exposed to price fluctuations in equity markets primarily through our pension plan assets, our nuclear decommissioning trust funds and trust assets securing certain executive benefits. We are required by the NRC to maintain externally funded trusts for the costs of decommissioning our nuclear power plants. We discuss our nuclear decommissioning trust funds in more detail in *Note 1*.

A hypothetical 10% decrease in equity prices would result in an approximate \$110 million reduction in the fair value of our financial investments that are classified as trading or available-for-sale securities. In 2004, the value of our defined benefit pension plan assets increased by \$114 million due to advances in the markets in which plan assets are invested. We describe our financial investments in more detail in *Note 4*, and our pension plans in *Note 7*.

Item 7A. Quantitative and Qualitative Disclosures about Market Risk

The information required by this item with respect to market risk is set forth in *Item 7* of Part II of this Form 10-K under the heading *Market Risk*.

Item 8. Financial Statements and Supplementary Data

REPORT OF MANAGEMENT

Financial Statements

The management of Constellation Energy Group, Inc. and Baltimore Gas and Electric Company (the "Companies") is responsible for the information and representations in the Companies' financial statements. The Companies prepare the financial statements in accordance with accounting principles generally accepted in the United States of America based upon available facts and circumstances and management's best estimates and judgments of known conditions.

PricewaterhouseCoopers LLP, an independent registered public accounting firm, has audited the financial statements and expressed their opinion on them. They performed their audit in accordance with the standards of the Public Company Accounting Oversight Board (United States).

The Audit Committee of the Board of Directors, which consists of four independent Directors, meets periodically with management, internal auditors, and PricewaterhouseCoopers LLP to review the activities of each in discharging their responsibilities. The internal audit staff and PricewaterhouseCoopers LLP have free access to the Audit Committee.

Management's Report on Internal Control Over Financial Reporting

The management of Constellation Energy Group, Inc. ("Constellation Energy"), under the direction of its principal executive officer and principal financial officer, is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Exchange Act Rule 13a-15(f).

Constellation Energy's system of internal control over financial reporting is designed to provide reasonable assurance to Constellation Energy's management and Board of Directors regarding the reliability of financial reporting and the preparation of financial statements for external purposes in

accordance with generally accepted accounting principles in the United States of America.

The management of Constellation Energy conducted an evaluation of the effectiveness of Constellation Energy's internal control over financial reporting using the framework in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). As noted in the COSO framework, an internal control system, no matter how well conceived and operated, can provide only reasonable-not absolute-assurance to management and the Board of Directors regarding achievement of an entity's financial reporting objectives. Based upon the evaluation under this framework, management concluded that Constellation Energy's internal control over financial reporting was effective as of December 31, 2004.

PricewaterhouseCoopers LLP, an independent registered public accounting firm, has audited management's assessment of the effectiveness of Constellation Energy's internal control over financial reporting at December 31, 2004, as stated in their report set forth below.

As discussed in *Item 9A. Controls and Procedures*, the management of Baltimore Gas & Electric Company ("BGE") has not assessed the effectiveness of BGE's internal control over financial reporting on a standalone basis because it is not yet required to do so by applicable federal securities laws and regulations.

REPORTS OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Shareholders of Constellation Energy Group, Inc.

We have completed an integrated audit of Constellation Energy Group, Inc. and Subsidiaries' 2004 consolidated financial statements and of its internal control over financial reporting as of December 31, 2004 and audits of its 2003 and 2002 consolidated financial statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Our opinions, based on our audits, are presented below.

Consolidated financial statements and financial statement schedule

In our opinion, the consolidated financial statements listed in the index appearing under Item 15(a) 1. presents fairly, in all material respects, the financial position of Constellation Energy Group, Inc. and Subsidiaries at December 31, 2004 and 2003,

and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2004 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedule listed in the index appearing under Item 15(a) 2 presents fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. These financial statements and financial statement schedule are the responsibility of the Company's management; our responsibility is to express an opinion on these financial statements and financial statement schedule based on our audits. We conducted our audits of these statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit of financial statements

includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

We have also previously audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets and statements of capitalization of Constellation Energy Group, Inc. and Subsidiaries as of December 31, 2002, 2001 and 2000, and the related consolidated statements of income, cash flows, and common shareholders' equity and comprehensive income for the years ended December 31, 2001 and 2000 (none of which are presented herein); and we expressed unqualified opinions on those consolidated financial statements. In our opinion, the information set forth in the Summary of Operations and Summary of Financial Condition of Constellation Energy Group, Inc. and Subsidiaries included in the Selected Financial Data for each of the five years in the period ended December 31, 2004, is fairly stated, in all material respects, in relation to the consolidated financial statements from which it has been derived.

Internal control over financial reporting

Also, in our opinion, management's assessment, included in Management's Report on Internal Control Over Financial Reporting appearing under Item 8, that the Company maintained effective internal control over financial reporting as of December 31, 2004, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), is fairly stated, in all material respects, based on those criteria. Furthermore, in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2004, based on criteria established in Internal Control—Integrated Framework issued by the COSO. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express opinions on management's assessment and on the effectiveness of the Company's internal control over financial reporting based on our audit. We conducted our audit of internal control over financial reporting in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. An audit of internal control over financial reporting includes obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we consider necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial

statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

PricewaterhouseCoopers LLP
Atlanta, Georgia
March 10, 2005

To Board of Directors and Shareholder of Baltimore Gas and Electric Company

In our opinion, the consolidated financial statements listed in the index appearing under Item 15(a) 1. present fairly, in all material respects, the financial position of Baltimore Gas and Electric Company and Subsidiaries at December 31, 2004 and 2003, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2004 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedule listed in the index appearing under Item 15(a) 2 presents fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. These financial statements are the responsibility of the Company's management; our responsibility is to express an opinion on these financial statements based on our audits. We conducted our audits of these statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

We have also previously audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Baltimore Gas

and Electric Company and Subsidiaries as of December 31, 2002, 2001 and 2000, and the related consolidated statements of income, cash flows, and common shareholders' equity and comprehensive income for the years ended December 31, 2001 and 2000 (none of which are presented herein); and we expressed unqualified opinions on those consolidated financial statements. In our opinion, the information set forth in the Summary of Operations and Summary of Financial Condition of Baltimore Gas and Electric Company and Subsidiaries included in the Selected Financial Data for each of the five years in the

period ended December 31, 2004, is fairly stated, in all material respects, in relation to the consolidated financial statements from which it has been derived.

1 Significant Accounting Policies

Nature of Our Business

Constellation Energy Group, Inc. (Constellation Energy) is a North American energy company that conducts its business through various subsidiaries including a merchant energy business and Baltimore Gas and Electric Company (BGE). Our merchant energy business is a competitive provider of energy solutions for a variety of customers. BGE is a regulated electric transmission and distribution utility company and a regulated gas distribution utility company with a service territory that covers the City of Baltimore and all or part of ten counties in central Maryland. We describe our operating segments in *Note 3*.

This report is a combined report of Constellation Energy and BGE. References in this report to "we" and "our" are to Constellation Energy and its subsidiaries. References in this report to the "regulated business(es)" are to BGE.

Consolidation Policy

We use three different accounting methods to report our investments in our subsidiaries or other companies: consolidation, the equity method, and the cost method.

Consolidation

We use consolidation for two types of entities:

- ◆ subsidiaries (other than variable interest entities) in which we own a majority of the voting stock, and
- ◆ variable interest entities (VIEs) for which we are the primary beneficiary. Financial Accounting Standards Board (FASB) Interpretation No. (FIN) 46R, *Consolidation of Variable Interest Entities*, requires us to use consolidation when we are the primary beneficiary of a VIE, which means that we have a controlling financial interest in a VIE. We discuss FIN 46R in more detail later in this Note.

Consolidation means that we combine the accounts of these entities with our accounts. Therefore, our consolidated financial statements include our accounts, the accounts of our majority-owned subsidiaries that are not VIEs, and the accounts of VIEs for which we are the primary beneficiary. We have not consolidated any entities for which we do not have a controlling voting interest. We eliminate all intercompany balances and transactions when we consolidate these accounts.

The Equity Method

We usually use the equity method to report investments, corporate joint ventures, partnerships, and affiliated companies (including qualifying facilities and power projects) where we hold a 20% to 50% voting interest. Under the equity method, we report:

- ◆ our interest in the entity as an investment in our Consolidated Balance Sheets, and
- ◆ our percentage share of the earnings from the entity in our Consolidated Statements of Income.

The only time we do not use this method is if we can exercise control over the operations and policies of the company. If we have control, accounting rules require us to use consolidation.

The Cost Method

We usually use the cost method if we hold less than a 20% voting interest in an investment. Under the cost method, we report our investment at cost in our Consolidated Balance Sheets. The only time we do not use this method is when we can exercise significant influence over the operations and policies of the company. If we have significant influence, accounting rules require us to use the equity method.

Regulation of Electric and Gas Business

The Maryland Public Service Commission (Maryland PSC) and the Federal Energy Regulatory Commission (FERC) provide the final determination of the rates we charge our customers for our regulated businesses. Generally, we use the same accounting policies and practices used by nonregulated companies for financial reporting under accounting principles generally accepted in the United States of America. However, sometimes the Maryland PSC or the FERC orders an accounting treatment different from that used by nonregulated companies to determine the rates we charge our customers.

When this happens, we must defer (include as an asset or liability in our Consolidated Balance Sheets and exclude from our Consolidated Statements of Income) certain regulated business expenses and income as regulatory assets and liabilities. We have recorded these regulatory assets and liabilities in our Consolidated Balance Sheets in accordance with Statement of Financial Accounting Standards (SFAS) No. 71, *Accounting for the Effects of Certain Types of Regulation*.

We summarize and discuss our regulatory assets and liabilities further in *Note 6*.

Use of Accounting Estimates

Management makes estimates and assumptions when preparing financial statements under accounting principles generally accepted in the United States of America. These estimates and assumptions affect various matters, including:

- ◆ our reported amounts of revenues and expenses in our Consolidated Statements of Income during the reporting periods,
- ◆ our reported amounts of assets and liabilities in our Consolidated Balance Sheets at the dates of the financial statements, and
- ◆ our disclosure of contingent assets and liabilities at the dates of the financial statements.

These estimates involve judgments with respect to numerous factors that are difficult to predict and are beyond management's control. As a result, actual amounts could materially differ from these estimates.

Reclassifications

We have reclassified certain prior-year amounts for comparative purposes. These reclassifications did not affect consolidated net income for the years presented.

Revenues

Nonregulated Businesses

We record revenues from the sale of energy, energy-related products, and energy services under the accrual method of accounting in the period when we deliver energy commodities or products, render services, or settle contracts. We use accrual accounting for our merchant energy and other nonregulated business transactions, including the generation or purchase and sale of electricity, gas, and coal as part of our physical delivery activities and for power, gas, and coal sales contracts that are not subject to mark-to-market accounting. Sales contracts that are eligible for accrual accounting include non-derivative transactions and derivatives that qualify for and are designated as normal purchases and normal sales of commodities that will be physically delivered. We record accrual revenues, including settlements with independent system operators, on a gross basis because we are a principal to the transaction and otherwise meet the requirements of Emerging Issues Task Force (EITF) 03-11, *Reporting Gains and Losses on Derivative Instruments That Are Subject to FASB Statement No. 133, Accounting for Derivative Instruments and Hedging Activities, and Not Held for Trading Purposes*, and EITF 99-19, *Reporting Revenue Gross as a Principal versus Net as an Agent*.

We may make or receive cash payments at the time we assume a power sale agreement for which the contract price differs from current market prices. We recognize the cash payment at inception in our Consolidated Balance Sheets as an "Other current asset or liability" to the extent that performance under the contract is less than 12 months and as an "Other asset or liability" to the extent that performance under the contract is greater than 12 months. We amortize these assets and liabilities into revenues based on the expected cash flows provided by the contracts.

We record revenues using the mark-to-market method of accounting for derivative contracts for which we are not permitted to use accrual accounting or hedge accounting. We discuss our use of hedge accounting in the *Derivatives and Hedging Activities* section later in this Note. These mark-to-market activities include derivative contracts for energy and other energy-related commodities. Under the mark-to-market method of accounting, we record the fair value of these derivatives as mark-to-market energy assets and liabilities at the time of contract execution. We record the changes in mark-to-market energy assets and liabilities on a net basis in "Nonregulated revenues" in our Consolidated Statements of Income. Mark-to-market revenues include:

- ◆ gains or losses on new transactions at origination to the extent permitted by applicable accounting rules,
- ◆ unrealized gains and losses from changes in the fair value of open contracts,
- ◆ net gains and losses from realized transactions, and
- ◆ changes in valuation adjustments.

We record valuation adjustments to reflect uncertainties associated with certain estimates inherent in the determination of the fair value of mark-to-market energy assets and liabilities. To the extent possible, we utilize market-based data together with quantitative methods for both measuring the uncertainties for which we record valuation adjustments and determining the level of such adjustments and changes in those levels.

We describe below the main types of valuation adjustments we record and the process for establishing each. Generally, increases in valuation adjustments reduce our earnings, and decreases in valuation adjustments increase our earnings. However, all or a portion of the effect on earnings of changes in valuation adjustments may be offset by changes in the value of the underlying positions.

- ◆ **Close-out adjustment**—represents the estimated cost to close out or sell to a third-party open mark-to-market positions. This valuation adjustment has the effect of valuing "long" positions (the purchase of a commodity) at the bid price and "short" positions (the sale of a commodity) at the offer price. We compute this adjustment based on our estimate of the bid/offer spread for each commodity and option price and the absolute quantity of our net open positions for each year. The level of total close-out valuation adjustments increases as we have larger unhedged positions, bid-offer spreads increase, or market information is not available, and it decreases as we reduce our unhedged positions, bid-offer spreads decrease, or market information becomes available. To the extent that we are not able to obtain observable market information for similar contracts, the close-out adjustment is equivalent to the initial contract margin, thereby recording no gain or loss at inception. In the absence of observable market information, there is a presumption that the transaction price is equal to the market value of the contract, and therefore we do not recognize a gain or loss at inception. We recognize such gains or losses in earnings as we realize cash flows under the contract or when observable market data becomes available.
- ◆ **Credit-spread adjustment**—for risk management purposes we compute the value of our mark-to-market energy assets and liabilities using a risk-free discount rate. In order to compute fair value for financial reporting purposes, we adjust the value of our mark-to-market energy assets to reflect the credit-worthiness of each customer (counterparty) based upon either published credit ratings, where available, or equivalent internal credit ratings and associated default probability percentages. We compute this adjustment by applying the appropriate default probability percentage to our outstanding credit exposure, net of collateral, for each counterparty. The level of this adjustment increases as our credit exposure to counterparties increases, the maturity terms of our transactions increase, or the credit ratings of our counterparties deteriorate, and it decreases when our credit exposure to counterparties decreases, the maturity terms of our transactions decrease, or the credit ratings of our counterparties improve.

Mark-to-market energy assets and liabilities consist of derivative contracts. While some of these contracts represent commodities or instruments for which prices are available from external sources, other commodities and certain contracts are not actively traded and are valued using modeling techniques to determine expected future market prices, contract quantities, or both. The market prices and quantities used to determine fair value reflect management's best estimate considering various factors, including closing exchange and over-the-counter quotations, time value, and volatility factors. However, future market prices and actual quantities will vary from those used in recording mark-to-market energy assets and liabilities, and it is possible that such variations could be material.

During 2002, the FASB issued EITF 02-3, *Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities*, that changed the accounting for energy contracts. These changes included requiring the accrual method of accounting for energy contracts that are not derivatives and clarifying when gains or losses can be recognized at the inception of derivative contracts. This change applied immediately to new contracts executed after October 25, 2002 and applied to existing non-derivative energy-related contracts beginning January 1, 2003.

In the first quarter of 2003, we adopted EITF 02-3 and recognized a \$430.0 million pre-tax, or \$266.1 million after-tax, charge as a cumulative effect of change in accounting principle.

The contracts that were subject to the requirements of EITF 02-3 were primarily our full requirements load-serving contracts and unit-contingent power purchase contracts, which are not derivatives. These contracts were entered into prior to our shift to accrual accounting earlier in 2002.

Certain transactions entered into under master agreements and other arrangements provide our merchant energy business with a right of setoff in the event of bankruptcy or default by the counterparty. We report such transactions net in our Consolidated Balance Sheets in accordance with FASB Interpretation No. 39, *Offsetting of Amounts Related to Certain Contracts*.

We also include equity in earnings from our investments in qualifying facilities and power projects in "Nonregulated revenues" in our Consolidated Statements of Income.

Regulated Business

We record regulated revenues when we provide service to customers.

Fuel and Purchased Energy Expenses

We incur costs for:

- ◆ the fuel we use to generate electricity,
- ◆ purchases of electricity from others, and
- ◆ natural gas and coal that we resell.

These costs are included in "Fuel and purchased energy expenses" in our Consolidated Statements of Income. We discuss certain of these separately below. We also include certain non-fuel direct costs, such as ancillary services, transmission costs, and brokerage fees in "Fuel and purchased energy expenses" in our Consolidated Statements of Income.

Fuel Used to Generate Electricity and Purchases of Electricity From Others

We assemble a variety of power supply resources, including baseload, intermediate, and peaking plants that we own, as well as a variety of power supply contracts that may have similar characteristics, in order to enable us to meet our customers' energy requirements, which vary on an hourly basis. We purchase power when our load-serving requirements exceed the amount of power available from our supply resources or when it is more economic to do so than to operate our power plants. The amount of power purchased depends on a number of factors, including the capacity and availability of our power plants, the level of customer demand, and the relative economics of generating power versus purchasing power from the spot market.

We also have acquired contracts and certain power purchase agreements that qualify as operating leases. Under these operating leases, we are required to make fixed capacity payments, as well as variable payments based on the actual output of the plants. We may make or receive cash payments at the time we acquire a contract or assume a power purchase agreement when the contract price differs from current market prices. We recognize the cash payment at inception in our Consolidated Balance Sheets as an "Other current asset or liability" to the extent that performance under the contract is less than 12 months and as an "Other asset or liability" to the extent that performance under the contract is greater than 12 months. We amortize these assets and liabilities into fuel and purchased energy expenses based on the expected cash flows provided by the contracts.

BGE purchased from our wholesale marketing and risk management operation 100% of the energy and capacity required to meet its fixed-price standard offer service obligations through June 30, 2004. BGE purchases 100% of the energy and capacity required to meet its residential fixed-price standard offer service obligations through June 30, 2006 from our wholesale marketing and risk management operation.

BGE is obligated to provide market-based standard offer service to residential customers from July 1, 2006 through May 31, 2010, and for commercial and industrial customers for one, two, or four year periods beyond June 30, 2004, depending on customer load. The POLR rates charged during these time periods will recover BGE's wholesale power supply costs and include an administrative fee. The administrative fee includes a shareholder return component and an incremental cost component.

Bidding to supply BGE's standard offer service to commercial and industrial customers beyond June 30, 2004 occurred through a multi-round competitive bidding process in 2004. As a result, BGE executed one and two-year contracts for commercial and industrial electric power supply.

Regulated Natural Gas

BGE charges its gas customers for the natural gas they purchase from BGE using "gas cost adjustment clauses" set by the Maryland PSC. Under these clauses, BGE defers the difference between certain of its actual costs related to the gas commodity and what it collects from customers under the commodity charge in a given period. BGE either bills or refunds its customers the difference in the future. The Maryland PSC approved a modification of the gas cost adjustment clauses to provide a market-based rates incentive mechanism. Under the market-based rates incentive mechanism, BGE's actual cost of gas is compared to a market index (a measure of the market price of gas in a given period). The difference between BGE's actual cost and the market index is shared equally between shareholders and customers. Effective November 2001, the Maryland PSC approved an order that modifies certain provisions of the market-based rates incentive mechanism. These provisions require that BGE secure fixed-price contracts for at least 10%, but not more than 20%, of forecasted system supply requirements for the November through March period. These fixed-price contracts are not subject to sharing under the market-based rates incentive mechanism.

Derivatives and Hedging Activities

We are exposed to market risk, including changes in interest rates and the impact of market fluctuations in the price and transportation costs of electricity, natural gas, and other commodities as discussed further in *Note 13*. In order to manage these risks, we use both derivative and non-derivative contracts that may provide for settlement in cash or by delivery of a commodity, including:

- ◆ forward contracts, which commit us to purchase or sell energy commodities in the future,
- ◆ futures contracts, which are exchange-traded standardized commitments to purchase or sell a commodity or financial instrument, or to make a cash settlement, at a specific price and future date,
- ◆ swap agreements, which require payments to or from counterparties based upon the differential between two prices for a predetermined contractual (notional) quantity, and
- ◆ option contracts, which convey the right to buy or sell a commodity, financial instrument, or index at a predetermined price.

SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*, as amended, requires that we recognize at fair value all derivatives not qualifying for accrual accounting under the normal purchase and normal sale exception. We record derivatives that are designated as hedges in "Risk management assets or liabilities" and derivatives not designated as hedges in "Mark-to-market energy assets or liabilities" in our Consolidated Balance Sheets.

We record changes in the value of derivatives that are not designated as cash-flow hedges in earnings during the period of change. We record changes in the fair value of derivatives designated as cash-flow hedges that are effective in offsetting the variability in cash flows of forecasted transactions in other comprehensive income until the forecasted transactions occur. At the time the forecasted transactions occur, we reclassify the amounts recorded in other comprehensive income into earnings. We record the ineffective portion of changes in the fair value of derivatives used as cash-flow hedges immediately in earnings.

We summarize our cash-flow hedging activities under SFAS No. 133 and the income statement classification of amounts reclassified from "Accumulated other comprehensive income (loss)" as follows:

Risk	Derivative	Income Statement Classification
Interest rate risk associated with new debt issuances	Interest rate swaps	Interest expense
Nonregulated energy sales	Futures and forward contracts	Nonregulated revenues
Nonregulated fuel and energy purchases	Futures and forward contracts	Fuel and purchased energy expenses
Nonregulated gas purchases for resale	Futures and forward contracts and price and basis swaps	Fuel and purchased energy expenses
Regulated gas purchases for resale	Price and basis swaps	Fuel and purchased energy expenses

We designate certain derivatives as fair value hedges. We record changes in the fair value of these derivatives and changes in the fair value of the hedged assets or liabilities in earnings as the changes occur. We summarize our fair value hedging activities and the income statement classification of changes in the fair value of these hedges and the related hedged items as follows:

Risk	Derivative	Income Statement Classification
Optimize mix of fixed and floating-rate debt	Interest rate swaps	Interest expense
Value of natural gas in storage	Forward contracts and price and basis swaps	Fuel and purchased energy expenses

We record changes in the fair value of interest rate swaps and the debt being hedged in "Risk management assets and liabilities" and "Long-term debt" and changes in the fair value of the gas being hedged and related derivatives in "Fuel stocks" and "Risk management assets and liabilities" in our Consolidated Balance Sheets. In addition, we record the difference between interest on hedged fixed-rate debt and floating-rate swaps in "Interest expense" in the periods that the swaps settle.

Credit Risk

Credit risk is the loss that may result from counterparty non-performance. We are exposed to credit risk, primarily through our merchant energy business. We use credit policies to manage our credit risk, including utilizing an established credit approval process, daily monitoring of counterparty limits, employing credit mitigation measures such as margin, collateral or prepayment arrangements, and using master netting agreements. We measure credit risk as the replacement cost for open energy commodity and derivative positions (both mark-to-market and accrual) plus amounts owed from counterparties for settled transactions. The replacement cost of open positions represents unrealized gains, less any unrealized losses where we have a legally enforceable right of setoff.

Electric and gas utilities, cooperatives, and energy marketers comprise the majority of counterparties underlying our assets from our wholesale marketing and risk management activities. We held cash collateral from these counterparties totaling \$145.9 million as of December 31, 2004 and \$121.9 million as of December 31, 2003. These amounts are included in "Customer deposits and collateral" in our Consolidated Balance Sheets.

Taxes

We summarize our income taxes in *Note 10*. Our subsidiary income taxes are computed on a separate return basis. As you read this section, it may be helpful to refer to *Note 10*.

Income Tax Expense

We have two categories of income tax expense—current and deferred. We describe each of these below:

- ◆ current income tax expense consists solely of regular tax less applicable tax credits, and
- ◆ deferred income tax expense is equal to the changes in the net deferred income tax liability, excluding amounts charged or credited to accumulated other comprehensive income. Our deferred income tax expense is increased or reduced for changes to the "Income taxes recoverable through future rates (net)" regulatory asset (described later in this Note) during the year.

Tax Credits

We have deferred the investment tax credits associated with our regulated business and assets previously held by our regulated business in our Consolidated Balance Sheets. The investment tax credits are amortized evenly to income over the life of each property. We reduce current income tax expense in our Consolidated Statements of Income for the investment tax credits and other tax credits associated with our nonregulated businesses.

We have certain investments in facilities that manufacture solid synthetic fuel produced from coal as defined under Section 29 of the Internal Revenue Code for which we claim tax credits on our Federal income tax return. We recognize the tax benefit of these credits in our Consolidated Statements of Income when we believe it is highly probable that the credits will be sustained.

Deferred Income Tax Assets and Liabilities

We must report some of our revenues and expenses differently for our financial statements than for income tax return purposes. The tax effects of the temporary differences in these items are reported as deferred income tax assets or liabilities in our Consolidated Balance Sheets. We measure the deferred income tax assets and liabilities using income tax rates that are currently in effect.

A portion of our total deferred income tax liability relates to our regulated business, but has not been reflected in the rates we charge our customers. We refer to this portion of the liability as "Income taxes recoverable through future rates (net)." We have recorded that portion of the net liability as a regulatory asset in our Consolidated Balance Sheets. We discuss this further in *Note 6*.

State and Local Taxes

State and local income taxes are included in "Income taxes" in our Consolidated Statements of Income.

BGE also pays Maryland public service company franchise tax on distribution, and delivery of electricity and natural gas. We include the franchise tax in "Taxes other than income taxes" in our Consolidated Statements of Income.

Earnings Per Share

Basic earnings per common share (EPS) is computed by dividing earnings applicable to common stock by the weighted-average number of common shares outstanding for the year. Diluted EPS reflects the potential dilution of common stock equivalent shares that could occur if securities or other contracts to issue common stock were exercised or converted into common stock. Our dilutive common stock equivalent shares were 1.0 million in 2004 and 0.4 million in 2003 and consisted of stock options. There were no stock options excluded from the computation of diluted EPS for the year ended December 31, 2004. Stock options to purchase approximately 1.2 million shares in 2003 and approximately 4.1 million shares in 2002 were not dilutive and were excluded from the computation of diluted EPS for these respective years.

Stock-Based Compensation

Under our long-term incentive plans, we have granted stock options, performance-based units, performance and service-based restricted stock, and equity to officers, key employees, and members of the Board of Directors. We discuss this in more detail in *Note 14*.

As permitted by SFAS No. 123, *Accounting for Stock-Based Compensation*, we presently measure our stock-based compensation using the intrinsic value method in accordance with Accounting Principles Board Opinion (APB) No. 25, *Accounting for Stock Issued to Employees*, and related interpretations.

Our stock options are granted with an exercise price not less than the market value of the common stock at the date of grant. Accordingly, no compensation expense is recorded for these awards. However, when we grant options subject to a contingency, we recognize compensation expense when options granted have an exercise price less than the market value of the underlying common stock on the date the contingency is satisfied. We amortize compensation expense for restricted stock and stock units over the performance/service period, which is typically a one to five-year period.

The following table illustrates the effect on net income and earnings per share had we applied the fair value recognition provision of SFAS No. 123 to all outstanding stock options and stock awards in each year.

<u>Year Ended December 31,</u>	<u>2004</u>	<u>2003</u>	<u>2002</u>
	<i>(In millions, except per share amounts)</i>		
Net income, as reported	\$539.7	\$277.3	\$525.6
Add: Stock-based compensation determined under intrinsic value method and included in reported net income, net of related tax effects	13.2	12.0	6.4
Deduct: Stock-based compensation expense determined under fair value based method for all awards, net of related tax effects	(21.3)	(20.7)	(17.1)
<u>Pro-forma net income</u>	<u>\$531.6</u>	<u>\$268.6</u>	<u>\$514.9</u>
Earnings per share:			
Basic—as reported	\$ 3.14	\$ 1.67	\$ 3.20
Basic—pro-forma	\$ 3.09	\$ 1.62	\$ 3.14
Diluted—as reported	\$ 3.12	\$ 1.66	\$ 3.20
Diluted—pro-forma	\$ 3.07	\$ 1.61	\$ 3.13

In the table above, the stock-based compensation expense included in reported net income, net of related tax effects is as follows:

- ◆ in 2004, \$13.2 million after-tax, or \$21.4 million pre-tax comprised of \$1.0 million of pre-tax expense for certain stock options, \$17.0 million for restricted stock, \$2.9 million for performance-based units, and \$0.5 million for equity grants,
- ◆ in 2003, \$12.0 million after-tax, or \$18.6 million pre-tax comprised of \$1.8 million of pre-tax expense for certain stock options, \$16.4 million for restricted stock, and \$0.4 million for equity grants, and
- ◆ in 2002, a \$6.4 million after-tax, or \$10.1 million pre-tax comprised of \$3.0 million of pre-tax expense for certain stock options, \$6.6 million for restricted stock, and \$0.5 million for equity grants.

In December 2004, the FASB issued SFAS No. 123R, *Share-Based Payment*, which changed the accounting for stock-based compensation to require companies to expense stock options and other equity awards based on their grant-date fair values. We discuss SFAS No. 123R in more detail in the *Accounting Standards Issued* section later in this Note.

Cash and Cash Equivalents

All highly liquid investments with original maturities of three months or less are considered cash equivalents.

Accounts Receivable and Allowance for Uncollectibles

Accounts receivable are stated at the historical carrying amount net of write-offs and allowance for uncollectibles. We establish an allowance for uncollectibles based on our expected exposure to the credit risk of customers based on a variety of factors.

Materials, Supplies, and Fuel Stocks

We record our fuel stocks, emissions credits, coal held for resale, and materials and supplies at the lower of cost or market. We determine cost using the average cost method for all of our inventory other than our coal held for resale for which we use the specific identification method.

Real Estate Projects

In *Note 4*, we summarize the real estate projects that are in our Consolidated Balance Sheets. At December 31, 2004, the projects primarily consist of approximately 190 acres of land holdings in various stages of development located at 4 sites in the central Maryland region, including an operating waste water treatment plant located in Anne Arundel County, Maryland. The costs incurred to develop properties are included as part of the cost of the properties.

Financial Investments and Trading Securities

In *Note 4*, we summarize the financial investments that are in our Consolidated Balance Sheets.

SFAS No. 115, *Accounting for Certain Investments in Debt and Equity Securities*, applies particular requirements to some of our investments in debt and equity securities. We report those investments at fair value, and we use either specific identification or average cost to determine their cost for computing realized gains or losses. We classify these investments as either trading securities or available-for-sale securities, which we describe separately below. We report investments that are not covered by SFAS No. 115 at their cost.

Trading Securities

In 2002, our other nonregulated businesses classified some of their investments in marketable equity securities and financial limited partnerships as trading securities. We included any unrealized gains or losses on these securities in "Nonregulated revenues" in our Consolidated Statements of Income. We no longer hold any investments classified as trading securities for which unrealized gains or losses are recognized in our Consolidated Statements of Income.

Available-for-Sale Securities

We classify our investments in the nuclear decommissioning trust funds as available-for-sale securities. We describe the nuclear decommissioning trusts and the related asset retirement obligations in the "Nuclear Decommissioning" section of this Note. In addition, we have investments in trust assets securing certain executive benefits that are classified as available-for-sale securities.

We include any unrealized gains or losses on our available-for-sale securities in "Accumulated other comprehensive income" in our Consolidated Statements of Common Shareholders' Equity and Comprehensive Income and Consolidated Statements of Capitalization.

Evaluation of Assets for Impairment and Other Than Temporary Decline in Value

Long-Lived Assets

We are required to evaluate certain assets that have long lives (for example, generating property and equipment and real estate) to determine if they are impaired when certain conditions exist. SFAS No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, provides the accounting requirements for impairments of long-lived assets. We are required to test our long-lived assets for recoverability whenever events or changes in circumstances indicate that their carrying amount may not be recoverable.

We determine if long-lived assets are impaired by comparing their undiscounted expected future cash flows to their carrying amount in our accounting records. We would record an impairment loss if the undiscounted expected future cash flows from an asset were less than the carrying amount of the asset. We are also required to evaluate our equity-method and cost-method investments (for example, in partnerships that own power projects) for impairment. APB No. 18, *The Equity Method of Accounting for Investments in Common Stock*, provides the accounting requirements for these investments. The standard for determining whether an impairment must be recorded under APB No. 18 is whether the investment has experienced a loss in value that is considered an "other than a temporary" decline in value.

We use our best estimates in making these evaluations and consider various factors, including forward price curves for energy, fuel costs, legislative initiatives, and operating costs. However, actual future market prices and project costs could vary from those used in our impairment evaluations, and the impact of such variations could be material.

Debt and Equity Securities

Our investments in debt and equity securities, which primarily consist of our nuclear decommissioning trust fund investments, are subject to impairment evaluations under SFAS No. 115, *Accounting for Certain Investments in Debt and Equity Securities*. SFAS No. 115 requires us to determine whether a decline in fair value of an investment below the amortized cost basis is other than temporary. If we determine that the decline in fair value is judged to be other than temporary, the cost basis of the investment must be written down to fair value as a new cost basis. We discuss EITF 03-1, *The Meaning of Other Than Temporary Impairment and Its Application to Certain Investments*, in the *Accounting Standards Issued* section later in this note.

Intangible Assets

Goodwill is the excess of the purchase price of an acquired business over the fair value of the net assets acquired. We account for goodwill and other intangibles under the provisions of SFAS No. 142, *Goodwill and Other Intangible Assets*. We do not amortize goodwill and certain other intangible assets. SFAS No. 142 requires us to evaluate goodwill and other intangibles for impairment at least annually or more frequently if events and circumstances indicate the business might be impaired. Goodwill is impaired if the carrying value of the business exceeds fair value. Annually, we estimate the fair value of the businesses we have acquired using techniques similar to those used to estimate future cash flows for long-lived assets as previously discussed. If the estimated fair value of the business is less than its carrying value, an impairment loss is required to be recognized to the extent that the carrying value of goodwill is greater than its fair value. SFAS No. 142 also requires the amortization of intangible assets with finite lives. We discuss the changes in our intangible assets in more detail in *Note 5*.

Property, Plant and Equipment, Depreciation, Amortization, and Accretion of Asset Retirement Obligations

We report our property, plant and equipment at its original cost, unless impaired under the provisions of SFAS No. 144.

Our original costs include:

- ◆ material and labor,
- ◆ contractor costs, and
- ◆ construction overhead costs, financing costs, and costs for asset retirement obligations (where applicable).

We own an undivided interest in the Keystone and Conemaugh electric generating plants in Western Pennsylvania, as well as in the transmission line that transports the plants' output to the joint owners' service territories. Our ownership interests in these plants are 20.99% in Keystone and 10.56% in Conemaugh. These ownership interests represented a net investment of \$191 million at December 31, 2004 and \$189 million at December 31, 2003. Each owner is responsible for financing its proportionate share of the plants' working funds. Working funds are used for operating expenses and capital expenditures. Operating expenses related to these plants are included in "Operating expenses" in our Consolidated Statements of Income. Capital costs related to these plants are included in "Nonregulated property, plant and equipment" in our Consolidated Balance Sheets.

The "Nonregulated property, plant and equipment" in our Consolidated Balance Sheets includes nonregulated generation construction work in progress of \$206.4 million at December 31, 2004 and \$184.4 million at December 31, 2003.

When we retire or dispose of property, plant and equipment, we remove the asset's cost from our Consolidated Balance Sheets. We charge this cost to accumulated depreciation for assets that were depreciated under the composite, straight-line method. This includes regulated property, plant and equipment and nonregulated generating assets transferred to our merchant energy business. For all other assets, we remove the accumulated depreciation and amortization amounts from our Consolidated Balance Sheets and record any gain or loss in our Consolidated Statements of Income.

The costs of maintenance and certain replacements are charged to "Operating expenses" in our Consolidated Statements of Income as incurred.

Depreciation Expense

We compute depreciation for our generating, electric transmission and distribution, and gas facilities over the estimated useful lives of depreciable property using the following methods:

- ◆ the composite, straight-line rates method, approved by the Maryland PSC, applied to the average investment, adjusted for anticipated costs of removal less salvage, in classes of depreciable property based on an average rate of approximately 3.5% per year for our regulated business,
- ◆ the composite, straight-line rates applied to the average investment, in classes of depreciable property based on an average rate of approximately 2.5% per year for the generating assets transferred from BGE to our merchant energy business, or
- ◆ the modified units of production method (greater of straight-line method or units of production method) for other generating assets.

Other assets are depreciated using the straight-line method and the following estimated useful lives:

<u>Asset</u>	<u>Estimated Useful Lives</u>
Building and improvements	20 - 50 years
Office equipment and furniture	3 - 20 years
Transportation equipment	5 - 15 years
Computer software	3 - 10 years

Amortization Expense

Amortization is an accounting process of reducing an amount in our Consolidated Balance Sheets over a period of time that approximates the useful life of the related item. When we reduce amounts in our Consolidated Balance Sheets, we increase amortization expense in our Consolidated Statements of Income.

Accretion Expense

SFAS No. 143, *Accounting for Asset Retirement Obligations* provides the accounting requirements for recognizing an estimated liability for legal obligations associated with the retirement of tangible long-lived assets. At December 31, 2004, \$821.8 million of our total asset retirement obligation of \$825.0 million was associated with our nuclear power plants—Calvert Cliffs, Nine Mile Point, and Ginna. We have also recorded asset retirement obligations associated with our other generating facilities and certain other long-lived assets. We record a liability when we are able to reasonably estimate the fair value of any future legal obligations associated with retirement that have been incurred and capitalize a corresponding amount as part of the book value of the related long-lived assets. The increase in the capitalized cost is included in determining depreciation expense over the estimated useful life of these assets. Since the fair value of the asset retirement obligations is determined using a present value approach, accretion of the liability due to the passage of time is recognized each period to “Accretion of asset retirement obligations” in our Consolidated Statements of Income until the settlement of the liability. We record a gain or loss when the liability is settled after retirement.

The change in our “Asset retirement obligations” liability during 2004 was as follows:

	<i>(In millions)</i>
Liability at January 1, 2004	\$595.9
Liabilities incurred	177.9
Liabilities settled	—
Accretion expense	53.2
Other	(2.0)
Revisions to cash flows	—
Liability at December 31, 2004	\$825.0

“Liabilities incurred” in the table above primarily reflect the asset retirement obligation recorded in connection with our acquisition of the R.E. Ginna Nuclear Power Plant (Ginna). We discuss the acquisition of Ginna in more detail in *Note 15*. “Other” in the table above represents the asset retirement obligation associated with our geothermal facility in Hawaii that was sold in the quarter ended June 2004. At the time of the sale, the asset retirement obligation was transferred to the buyer of the geothermal facility. We discuss the sale of the geothermal facility in more detail in *Note 2*.

Nuclear Fuel

We amortize nuclear fuel based on the energy produced over the life of the fuel including the quarterly fees we pay to the Department of Energy for the future disposal of spent nuclear fuel. These fees are based on the kilowatt-hours of electricity sold. We report the amortization expense for nuclear fuel in “Fuel and purchased energy expenses” in our Consolidated Statements of Income.

Nuclear Decommissioning

Effective January 1, 2003, we began to record decommissioning expense for Calvert Cliffs Nuclear Power Plant (Calvert Cliffs) in accordance with SFAS No. 143 *Accounting for Asset Retirement Obligations* (SFAS 143). The “Asset retirement obligations” liability associated with the decommissioning of Calvert Cliffs was \$286.1 million at December 31, 2004 and \$265.5 million at December 31, 2003. Our contributions to the nuclear decommissioning trust funds for Calvert Cliffs were \$22.0 million for 2004, \$13.2 million for 2003 and \$17.6 million for 2002. Under the Maryland PSC’s order deregulating electric generation, BGE’s customers must pay a total of \$520 million in 1993 dollars, adjusted for inflation, to decommission Calvert Cliffs. BGE is collecting this amount on behalf of and passing it to Calvert Cliffs Nuclear Power Plant, Inc. Calvert Cliffs Nuclear Power Plant, Inc. is responsible for any difference between this amount and the actual costs to decommission the plant.

We began to record decommissioning expense for Nine Mile Point Nuclear Station (Nine Mile Point) in accordance with SFAS No. 143 on January 1, 2003. The “Asset retirement obligations” liability associated with the decommissioning was \$351.5 million at December 31, 2004 and \$326.2 million at December 31, 2003. We determined that the decommissioning trust funds established for Nine Mile Point are adequately funded to cover the future costs to decommission the plant and as such, no contributions were made to the trust funds during the years ended December 31, 2004, 2003, and 2002.

Upon the closing of the Ginna acquisition in 2004, the seller transferred \$200.8 million in decommissioning funds. In return, we assumed all liability for the costs to decommission the unit. We believe that this transfer will be sufficient to cover the future costs to decommission the plant and as such, no contributions were made to the trust funds during the year ended December 31, 2004. Effective June 2004, we began to record decommissioning expense for Ginna in accordance with SFAS No. 143. The “Asset retirement obligations” liability associated with the decommissioning was \$184.2 million at December 31, 2004. We discuss the acquisition of Ginna in more detail in *Note 15*.

In accordance with Nuclear Regulatory Commission (NRC) regulations, we maintain external decommissioning trusts to fund the costs expected to be incurred to decommission Calvert Cliffs, Nine Mile Point and Ginna. The NRC requires utilities to provide financial assurance that they will accumulate sufficient funds to pay for the cost of nuclear decommissioning. The assets in the trusts are reported in "Nuclear decommissioning trust funds" in our Consolidated Balance Sheets. These amounts are legally restricted for funding the costs of decommissioning. We classify the investments in the nuclear decommissioning trust funds as available-for-sale securities, and we report these investments at fair value in our Consolidated Balance Sheets as previously discussed in this Note. Investments by nuclear decommissioning trust funds are guided by the "prudent man" investment principle. The funds are prohibited from investing directly in Constellation Energy or its affiliates and any other entity owning a nuclear power plant.

As the owner of Calvert Cliffs, we are required, along with other domestic utilities, by the Energy Policy Act of 1992 to make contributions to a fund for decommissioning and decontaminating the Department of Energy's uranium enrichment facilities. The contributions are paid by BGE and generally payable over 15 years with escalation for inflation and are based upon the proportionate amount of uranium enriched by the Department of Energy for each utility. BGE amortizes the deferred costs of decommissioning and decontaminating the Department of Energy's uranium enrichment facilities. The previous owners retained the obligation for Nine Mile Point and Ginna.

Capitalized Interest and Allowance for Funds Used During Construction

Capitalized Interest

Our nonregulated businesses capitalize interest costs under SFAS No. 34, *Capitalizing Interest Costs*, for costs incurred to finance our power plant construction projects, real estate developed for internal use, and other capital projects.

Allowance for Funds Used During Construction (AFC)

BGE finances its construction projects with borrowed funds and equity funds. BGE is allowed by the Maryland PSC to record the costs of these funds as part of the cost of construction projects in its Consolidated Balance Sheets. BGE does this through the AFC, which it calculates using rates authorized by the Maryland PSC. BGE bills its customers for the AFC plus a return after the utility property is placed in service.

The AFC rates are 9.4% for electric plant, 8.6% for gas plant, and 9.2% for common plant. BGE compounds AFC annually.

Long-Term Debt

We defer all costs related to the issuance of long-term debt. These costs include underwriters' commissions, discounts or premiums, other costs such as legal, accounting, and regulatory fees, and printing costs. We amortize these costs into interest expense over the life of the debt.

When BGE incurs gains or losses on debt that it retires prior to maturity, it amortizes those gains or losses over the remaining original life of the debt.

Accounting Standards Issued

SFAS 123 Revised

In December 2004, the FASB issued SFAS No. 123 Revised (SFAS No. 123R), *Share-Based Payment*. SFAS No. 123R revises SFAS No. 123, *Accounting for Stock-Based Compensation*, and supersedes APB No. 25, *Accounting for Stock Issued to Employees*. SFAS No. 123R requires companies to recognize compensation expense for all equity-based compensation awards issued to employees. Equity-based compensation awards include stock options, restricted stock, and any other share-based payments. Under SFAS 123R, we must recognize compensation cost over the period during which an employee is required to provide service in exchange for the award. We estimate the fair value of employee stock options using option-pricing models adjusted for the unique characteristics of those instruments.

We plan to adopt SFAS No. 123R effective July 1, 2005 using the Modified Prospective Application method without restatement of prior interim periods. Under this method, we will begin to amortize compensation cost for the remaining portion of our outstanding awards on the adoption date for which the requisite service has not yet been rendered. Compensation cost for these awards will be based on the fair value of those awards as disclosed on a pro-forma basis under SFAS 123 in the *Stock-Based Compensation* section of this note. We will account for awards that are granted, modified, or settled after the adoption date in accordance with SFAS No. 123R.

Currently, we are evaluating the impact of adopting this standard on our financial results. However, we do not believe the impact of this standard on our ongoing operating results will be materially different than the results as disclosed on a pro-forma basis in the *Stock-Based Compensation* section of this note.

EITF 03-1

In March 2004, the EITF reached a consensus on Issue 03-1, *The Meaning of Other Than Temporary Impairment and Its Application to Certain Investments*, related to measurement and recognition criteria that would have become effective July 1, 2004. In accordance with Nuclear Regulatory Commission regulations, we do not manage the day-to-day activities of our nuclear decommissioning trust funds. As a result, a strict interpretation of EITF 03-1 would indicate that we do not have the ability and intent to hold investments whose market value is less than our cost until recovery.

In September 2004, the FASB issued FSP EITF 03-1-1 which delayed the implementation of the measurement and recognition criteria until additional implementation guidance could be developed. If relief from the strict interpretation previously discussed is not included in the pending FASB implementation guidance, we would be required to record into earnings any decline in market value below the cost of our nuclear decommissioning investments. If this interpretation of EITF 03-1 had become effective at December 31, 2004, we would have been required to record a pre-tax charge of approximately \$2.8 million. We have approximately \$1 billion invested in nuclear decommissioning trust assets. Therefore, a one percent decline in all of our investments below book value would result in approximately a \$10 million pre-tax charge. We cannot predict the outcome of the implementation guidance. However, the impact could be material to our financial results.

Accounting Standards Adopted

FSP 106-2

In May 2004, FASB Staff Position (FSP) 106-2 was issued, which addresses accounting and disclosure requirements pertaining to the Medicare Prescription Drug Improvement and Modernization Act of 2003. FSP 106-2 is effective July 1, 2004. We discuss the impacts of the Medicare Prescription Drug Improvement and Modernization Act of 2003 recorded in accordance with FSP 106-2 in *Note 7*.

FSP 109-2

In the fourth quarter of 2004, the President signed into law the American Jobs Creation Act of 2004 (the Act) that provides a temporary incentive for U. S. multinational companies to repatriate foreign earnings. The temporary incentive for U. S. companies to repatriate accumulated foreign earnings provides an elective, 85 percent dividends received deduction for certain dividends from controlled foreign corporations that will be reinvested in the United States.

In response to the issuance of the Act, in December 2004, the FASB issued FSP No. 109-2, *Accounting and Disclosure Guidance for the Foreign Earnings Repatriation Provision within the American Jobs Creation Act of 2004*. FSP No. 109-2 provides companies with additional time to evaluate the impact of the Act and provides accounting and disclosure guidance for applying the foreign earnings repatriation provisions of the Act. In December 2004, we repatriated \$15 million in the form of a dividend from our Panamanian distribution facility, which we plan to reinvest in the United States to take advantage of the dividends received deduction. Since we previously provided federal deferred income taxes on the earnings of our foreign subsidiary that issued the dividend, in 2004 we recorded a net reduction of \$4.4 million in federal tax expense in connection with the earnings repatriation.

FIN 46/FIN 46R

In January 2003, the FASB issued FIN 46, *Consolidation of Variable Interest Entities*, which was subsequently revised in its entirety with the issuance of FIN 46R in December 2003.

FIN 46R establishes conditions under which an entity must be consolidated based upon variable interests rather than voting interests. Variable interests are ownership interests or contractual relationships that enable the holder to share in the financial risks and rewards resulting from the activities of a Variable Interest Entity (VIE). A VIE can be a corporation, partnership, trust, or any other legal structure used for business purposes. An entity is considered a VIE under FIN 46R if it does not have an equity investment sufficient for it to finance its activities without assistance from variable interest holders or if its equity investors lack any of the following characteristics of a controlling financial interest:

- ◆ control through voting rights,
- ◆ obligation to absorb expected losses, or
- ◆ right to receive expected residual returns.

FIN 46R requires us to consolidate VIEs for which we are the primary beneficiary and to disclose certain information about significant variable interests we hold. The primary beneficiary of a VIE is the entity that receives the majority of a VIE's expected losses, expected residual returns, or both.

FIN 46R was effective March 31, 2004, for all VIEs except special purpose entities (SPEs), for which the effective date was December 31, 2003. Therefore, at December 31, 2003, we and BGE deconsolidated BGE Capital Trust II, an SPE established to issue trust preferred securities as described in *Note 9*, because BGE is not its primary beneficiary. As a result, we currently record \$257.7 million of deferrable interest subordinated debentures due to BGE Capital Trust II, and \$7.7 million equity investment in BGE Capital Trust II in "Other assets" in our and BGE's Consolidated Balance Sheets.

As a result of adopting the remainder of the provisions of FIN 46R as of March 31, 2004, we were not required to consolidate or deconsolidate any non-SPE entities with which we are involved through variable interests. We had preliminarily determined that we were the primary beneficiary for an unconsolidated investment in a hydroelectric generating plant located in Pennsylvania because our two-thirds interest in the plant's earnings are disproportionate to our 50% voting interest. However, we subsequently determined that the entity is not a VIE because less than substantially all of the plant's activities are conducted on our behalf, and therefore we do not have to consolidate the entity.

We have a significant interest in the following VIEs for which we are not the primary beneficiary:

VIE	Nature of Involvement	Date of Involvement
Power projects and fuel supply entities	Equity investment and guarantees	Prior to 2003
Natural gas producing facility	Volumetric and price swap	July 2003

The following is summary information about these entities as of December 31, 2004:

	<i>(In millions)</i>
Total assets	\$291.1
Total liabilities	147.0
Our ownership interest	41.1
Other ownership interests	103.0
Our maximum exposure to loss	75.3

The maximum exposure to loss represents the loss that we would incur in the unlikely event that our interests in all of these entities were to become worthless and we were required to fund the full amount of all guarantees associated with these entities. Our maximum exposure to loss as of December 31, 2004 consists of the following:

- ◆ the carrying amount of our investment totaling \$41.1 million,
- ◆ debt and performance guarantees totaling \$13.4 million, and
- ◆ volumetric and price variability of up to \$20.8 million associated with a natural gas producer swap, based on contract volumes and gas prices as of December 31, 2004.

We assess the risk of a loss equal to our maximum exposure to be remote.

2 Workforce Reduction, Impairment Losses, and Other Events

2004 Events

	<i>Pre-Tax</i>	<i>After-Tax</i>
	<i>(In millions)</i>	
Loss from discontinued operations	\$(75.6)	\$(49.1)
Recognition of 2003 synthetic fuel tax credits	—	35.9
Workforce reduction costs	(9.7)	(5.9)
Impairment losses and other costs	(3.7)	(2.2)
Net loss on sales of investments and other assets	(1.2)	(0.6)
Total special items	\$(90.2)	\$(21.9)

Loss from Discontinued Operations

In the fourth quarter of 2003, we began to re-evaluate our strategy regarding our geothermal generating facility in Hawaii. The reevaluation of our strategy included soliciting bids to determine the level of interest in the facility. As of December 31, 2003, management determined that disposal of the facility was more likely than not to occur. As a result, we evaluated the facility for impairment as of December 31, 2003, in accordance with SFAS No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, and determined that the facility was not impaired primarily due to indicative bids from third parties above the carrying value of the assets.

In March 2004, after reviewing final binding offers, management committed to a plan to sell the facility that met the "held for sale" criteria under SFAS No. 144. Under SFAS No. 144, we record assets and liabilities held for sale at the lesser of the carrying amount or fair value less cost to sell.

The fair value of the facility as of March 31, 2004, based on the bids under consideration, was below carrying value. Therefore, we recorded a \$71.6 million pre-tax, or \$47.3 million after-tax, impairment charge during the first quarter of 2004. We reported the after-tax impairment charge as a component of "Loss from discontinued operations" in our Consolidated Statements of Income. Additionally, we recognized \$1.5 million pre-tax, or \$1.0 million after-tax, of earnings from the facility for the quarter ended March 31, 2004 as a component of "Loss from discontinued operations."

In June 2004, we completed the sale of the facility. Based on the final sales price and other costs incurred over the remainder of the year, we recognized an additional loss of \$5.5 million pre-tax, or \$2.8 million after-tax. The sale of this facility was reflected in our merchant energy business reportable segment. In addition, as a result of a current audit relating to prior tax years for this facility, we could record additional gain or loss from discontinued operations in future periods.

We have not reclassified the prior year results of operations, which were reported under the equity method as "Nonregulated revenues," based on the immateriality of the amounts involved. The facility had a \$4.0 million net loss, including a \$1.1 million cumulative effect of change in accounting principle for the adoption of SFAS No. 143, during 2003.

Synthetic Fuel Tax Credits

In 2003, we purchased 99% ownership in a South Carolina facility that produces synthetic fuel. We did not recognize in our Consolidated Statements of Income the tax benefit of \$35.9 million for credits claimed on our South Carolina facility in 2003 pending receipt of a favorable private letter ruling. In April 2004, we received a favorable private letter ruling. We believe receipt of the private letter ruling provides assurance that it is highly probable that the credits will be sustained. Therefore, we recognized the tax benefit of \$35.9 million in our Consolidated Statements of Income in 2004. We discuss the synthetic fuel tax credits in more detail in *Note 10*.

Workforce Reduction Costs

In the fourth quarter of 2004, we approved a restructuring of the work forces of the Nine Mile Point and Calvert Cliffs nuclear generating stations that was effective in January 2005. In connection with this restructuring, approximately 108 employees will receive severance and other benefits under our existing benefit programs. At December 31, 2004, we accrued the estimated total cost of this reduction in workforce of \$9.7 million pre-tax, or \$5.9 million after-tax, in accordance with applicable accounting requirements.

Impairment of Financial Investment

Our other nonregulated businesses recognized a pre-tax impairment loss of \$3.7 million, or \$2.2 million after-tax, during the year ended December 31, 2004 related to an other than temporary decline in fair value of certain financial investments.

Net Loss on Sales of Investments and Other Assets

Our other nonregulated businesses recognized a pre-tax loss of \$1.2 million, or \$0.6 million after-tax, during the year ended December 31, 2004 on the sale of non-core assets as follows:

- ◆ a \$1.1 million pre-tax gain in the first quarter on an installment sale of real estate,
- ◆ a \$0.4 million pre-tax gain in the first quarter on the sale of a financial investment,
- ◆ a \$3.3 million pre-tax gain in the second quarter on the sale of a financial investment,
- ◆ a \$1.1 million pre-tax gain in the second quarter on the sale of real estate,
- ◆ a \$7.5 million pre-tax loss in the third quarter on the sale of a financial investment, and
- ◆ a \$0.4 million pre-tax gain in the fourth quarter on the sale of a financial investment.

2003 Events

	Pre-Tax	After-Tax
	<i>(In millions)</i>	
Workforce reduction costs	\$ (2.1)	\$ (1.3)
Reduction of financial investment	(0.6)	(0.4)
Net gain on sales of investments and other assets	26.2	16.4
Total special items	\$23.5	\$14.7

Workforce Reduction Costs

During 2003, we recorded \$2.1 million in pre-tax expense, or \$1.3 million after-tax, of which BGE recorded \$0.7 million pre-tax, associated with deferred payments to employees eligible for the 2001 Voluntary Special Early Retirement Program.

In 2004, we completed the 2002 workforce reduction programs. As a result, no involuntary severance liability was recorded under EITF 94-3, *Liability Recognition for Certain Employee Termination Benefits and Other Costs to Exit an Activity (including Certain Costs Incurred in a Restructuring)*, at December 31, 2004.

Impairment Losses and Other Costs

In 2003, our other nonregulated businesses recognized an impairment loss of \$0.6 million pre-tax, or \$0.4 million after-tax, related to the decline in value of our investment in an airplane.

Net Gain on Sales of Investments and Other Assets

During 2003, our other nonregulated businesses recognized \$26.2 million of pre-tax, or \$16.4 million after-tax, gains on the sales of non-core assets as follows:

- ◆ a \$13.1 million pre-tax gain on the sale of certain real estate,
- ◆ a \$7.2 million pre-tax gain on the sale of an oil tanker to the U.S. Navy,
- ◆ a \$5.3 million pre-tax gain on the favorable settlement of a contingent obligation we had previously reserved relating to the sale of our Guatemalan power plant operation in the fourth quarter of 2001, and
- ◆ a \$0.6 million pre-tax gain on the sale of financial investments.

Hurricane Isabel

In September 2003, Hurricane Isabel caused damage to the electric and gas distribution system of BGE. As a result, BGE incurred capitalized costs of \$32.0 million and maintenance expenses of \$36.8 million, or \$22.2 million after-tax to restore its distribution system. The maintenance expenses included \$32.1 million pre-tax, or \$19.4 million after-tax, of incremental expenses.

2002 Events

	Pre-Tax	After-Tax
	<i>(In millions)</i>	
Workforce reduction costs:		
Costs associated with 2001 programs	\$ (50.8)	\$ (30.8)
Costs associated with programs initiated in 2002	(12.0)	(7.2)
Total workforce reduction costs	(62.8)	(38.0)
Impairment losses and other costs:		
Impairments of investments in qualifying facilities and power projects	(14.4)	(9.9)
Costs associated with exit of BGE Home merchandise stores	(9.0)	(6.1)
Impairments of real estate and international investments	(1.8)	(1.2)

Net gain on sales of investments and other assets	261.3	166.7
Total special items	\$173.3	\$111.5

Workforce Reduction Costs

During 2002, we incurred costs related to workforce reduction efforts initiated in the fourth quarter of 2001 as discussed in this note and additional initiatives undertaken in the third quarter of 2002. We discuss these costs in more detail below.

Costs associated with 2001 Programs

In 2002, we recorded \$63.7 million of net workforce reduction costs associated with our 2001 workforce reduction initiatives as discussed below. The \$63.7 million included \$50.8 million recognized as expense, of which BGE included \$33.8 million. The remaining \$12.9 million was recognized by BGE as a regulatory asset related to its gas business as discussed in *Note 6*.

- ◆ We recorded \$52.9 million when 308 employees elected the age 50 to 54 Voluntary Special Early Retirement Program (VSERP).
- ◆ We reversed \$17.8 million of the \$25.1 million involuntary severance accrual that was recorded in 2001 to reflect the employees that elected the age 50 to 54 VSERP. Ultimately, we involuntarily severed 129 employees that resulted in a total cost for the involuntary severance program of \$7.3 million.

- ◆ We recorded \$29.6 million of settlement charges related to our pension plans under SFAS No. 88, *Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits*. These charges reflect the recognition of actuarial gains and losses associated with employees who have retired and taken their pension in the form of a lump-sum payment. Under SFAS No. 88, the settlement charge could not be recognized until lump-sum pension payments exceeded annual pension plan service and interest cost, which occurred in 2002.

- ◆ We recorded a \$1.6 million expense associated with deferred payments to employees eligible for the VSERP.
- ◆ Partially offsetting these costs, we reversed approximately \$2.6 million of previously accrued workforce reduction costs primarily as a result of the reversal of education and outplacement assistance benefits we accrued that employees did not utilize to the extent expected.

In 2002, we completed the 2001 workforce reduction programs. Accordingly, no involuntary severance liability recorded under EITF 94-3 remained at December 31, 2002.

Costs associated with 2002 Programs

In 2002, we recorded \$12.0 million of expenses for anticipated involuntary severance costs in accordance with EITF 94-3 associated with new workforce reduction initiatives as follows:

- ◆ We recorded \$8.5 million for workforce reduction costs for the severance of 120 employees at Calvert Cliffs Nuclear Power Plant (Calvert Cliffs).
- ◆ We recorded \$1.6 million of workforce reduction costs for the severance of 27 employees in our information technology organization. BGE recorded \$0.6 million of this amount.
- ◆ We recorded \$1.9 million of workforce reduction costs for the severance of 20 employees in our legal organization. BGE recorded \$0.9 million of this amount.

At December 31, 2002, the involuntary severance liability recorded under EITF 94-3 for our 2002 workforce reduction programs was \$12.0 million.

Impairment Losses and Other Costs

Investments in Qualifying Facilities and Power Projects

In the third quarter of 2002, our merchant energy business recorded impairment losses on certain of the investments in qualifying facilities and power projects totaling \$14.4 million under the provisions of APB No. 18. We describe these investments in *Note 4*. The provisions of APB No. 18 require that an impairment loss be recognized when an investment experiences a loss in value that is other than temporary as discussed in *Note 1*.

During the third quarter of 2002, we performed an analysis of whether any of the investments were impaired. As a result of our analysis, we concluded that the declines in value of particular investments in certain qualifying facilities and power projects were other than temporary in nature under the provisions of APB No. 18 and we recognized the following losses in 2002:

- ◆ We recognized a \$5.2 million other than temporary decline in value of our investment in a partnership that owns a geothermal project in Nevada. This project experienced a well implosion and we believe that the expected cash flows from the project will not be sufficient to recover our equity interest in that partnership.
- ◆ We recognized a \$2.6 million other than temporary decline in value of our investment in a fuel processing site in Pennsylvania where the expected cash flows from a sublease are no longer expected to be sufficient to recover our lease costs associated with this site.
- ◆ We recognized a \$6.6 million other than temporary decline in value of our investment in a partnership that owns a waste burning power project in Michigan. In 2001, we recognized a \$6.1 million pre-tax impairment loss on this investment because we expected operating cash flows would not be sufficient to pay existing debt service and that we would not be able to recover our equity investment. However, at that time, we believed that we would recover our senior working capital loans receivable and accounts receivable for operating the project. As of the third quarter of 2002, the operating performance of the project did not improve as expected, and we believed the expected future cash flows were no longer sufficient to recover these receivables. Therefore, we recognized an additional impairment loss on this investment.

Closing of BGE Home Retail Merchandise Stores

In September 2002, we announced our decision to close our BGE Home retail merchandise stores. In connection with that decision, we recognized \$9.5 million in exit costs. We recognized \$2.9 million related to expected severance costs for 93 employees and \$2.9 million of costs in connection with the termination of leases for the eight stores and other exit costs in accordance with EITF 94-3.

We also recognized \$3.2 million for the write-off of unamortized leasehold improvements in accordance with SFAS No. 144, and \$0.5 million for the write-down of inventory to a lower-of-cost-or-market valuation in accordance with Accounting Research Bulletin No. 43, *Restatement and Revision of Accounting Research Bulletins*. The \$0.5 million is included in "Operating expenses" in our Consolidated Statements of Income.

Real Estate and International Investments

We changed our strategy from an intent to hold to an intent to sell for certain of our non-core assets in 2001. During 2002, we determined that the fair value of several real estate projects and our investment in a South American generation project declined below their respective book values due to deteriorating market conditions for these projects. Accordingly, we recorded losses that totaled \$1.8 million for these projects in accordance with SFAS No. 144 and APB No. 18.

Net Gain on Sales of Investments and Other Assets

In February 2002, Reliant Resources, Inc. acquired all of the outstanding shares of Orion Power Holdings, Inc. (Orion) for \$26.80 per share, including the shares we owned of Orion. We received cash proceeds of \$454.1 million and recognized a gain of \$255.5 million on the sale of our investment.

In the fourth quarter of 2001, we announced our decision to focus efforts and capital on core domestic energy businesses and undertook a plan to sell a number of non-core businesses and investments. In 2002, we made further progress on this initiative, and recognized approximately \$5.8 million in net gains from the sale of several non-core assets including:

- ◆ Our other nonregulated businesses recognized gains totaling \$6.7 million on the sale of several parcels of real estate and financial investments.
- ◆ In October 2002, we sold all of our 18 senior-living facilities for \$77.2 million that represents a combination of cash and the assumption by the buyer of existing mortgages. Our other nonregulated businesses recognized a \$2.8 million gain on the sale of our entire ownership interest in these facilities.
- ◆ Our merchant energy business recognized a \$2.3 million gain on the sale of a discontinued wind-powered development project.
- ◆ In 2001, our merchant energy business recognized an impairment loss on four turbines, associated with a discontinued development program. Since that time, many other companies canceled development projects and the market values for turbines have declined significantly. Orders for three of the four turbines were canceled with termination fees paid to the manufacturer consistent with the amount recognized in December 2001. The fourth turbine-generator set was sold during 2002 for \$6.0 million below its book value.

3 Information by Operating Segment

Our reportable operating segments are—Merchant Energy, Regulated Electric, and Regulated Gas:

- ◆ Our nonregulated merchant energy business includes:
 - full requirements load-serving sales of energy and capacity to utilities and commercial and industrial customers,
 - structured transactions and risk management services for various customers (including hedging of output from generating facilities and fuel costs),
 - gas retail energy products and services to commercial and industrial customers,
 - fossil, nuclear, and hydroelectric generating facilities and interests in qualifying facilities, fuel processing facilities, and power projects in the United States,
 - coal sourcing services for the variable or fixed supply needs of North American and international power generators, and
 - operations and maintenance consulting services.
- ◆ Our regulated electric business purchases, transmits, distributes, and sells electricity in Maryland.
- ◆ Our regulated gas business purchases, transports, and sells natural gas in Maryland.

Our remaining nonregulated businesses:

- ◆ design, construct, and operate heating, cooling, and cogeneration facilities for commercial, industrial, and municipal customers throughout North America, and
- ◆ provide home improvements, service electric and gas appliances, service heating, air conditioning, plumbing, electrical, and indoor air quality systems, and provide natural gas marketing to residential customers in central Maryland.

In addition, we own several investments that we do not consider to be core operations. These include financial investments, real estate projects, and interests in Panamanian distribution facility and in a fund that holds interests in two South American energy projects.

Our Merchant Energy, Regulated Electric, and Regulated Gas reportable segments are strategic businesses based principally upon regulations, products, and services that require different technology and marketing strategies. We evaluate the performance of these segments based on net income. We account for intersegment revenues using market prices. We present a summary of information by operating segment on the next page.

Certain prior-year amounts have been reclassified to conform with the current year's presentation.

- (a) Our merchant energy business and our other nonregulated businesses recognized after-tax charges (income) of (\$30.0 million) and \$2.8 million, respectively, for recognition of 2003 synthetic fuel tax credits, workforce reduction costs, impairment losses and other costs, and net losses on sales of investments and other assets as described in more detail in Note 2.
- (b) Our merchant energy business, our regulated electric business, our regulated gas business, and our other nonregulated businesses recognized after-tax charges (income) of \$0.7 million, \$0.4 million, \$0.1 million, and (\$15.9 million), respectively, for workforce reduction costs, impairment losses and other costs, and net gains on sales of investments and other assets as described in more detail in Note 2.
- (c) Our merchant energy business, our regulated electric business, our regulated gas business, and our other nonregulated businesses recognized after-tax charges (income) of \$28.3 million, \$20.5 million, \$0.8 million, and (\$161.1 million), respectively, for workforce reduction costs, business exit costs, impairment losses and other costs, and net gains on sales of investments and other assets as described in more detail in Note 2.

4 Investments

Real Estate Projects

Real estate projects recorded in "Other assets" were \$28.8 million at December 31, 2004 and \$44.3 million at December 31, 2003.

Investments in Qualifying Facilities and Power Projects

Our merchant energy business holds up to a 50% voting interest in 24 operating domestic energy projects that consist of electric generation, fuel processing, or fuel handling facilities. Of these 24 projects, 17 are "qualifying facilities" that receive certain exemptions and pricing under the Public Utility Regulatory Policy Act of 1978 based on the facilities' energy source or the use of a cogeneration process.

Investments in qualifying facilities and domestic power projects held by our merchant energy business consist of the following:

<i>At December 31,</i>	2004	2003
	<i>(In millions)</i>	
Coal	\$128.7	\$130.5
Hydroelectric	55.8	57.3
Geothermal	46.3	56.0
Biomass	50.2	51.4
Fuel Processing	22.5	22.5
Solar	10.4	10.5
Total	\$313.9	\$328.2

The investment in qualifying facilities and domestic power projects were accounted for under the following methods:

<i>At December 31,</i>	2004	2003
	<i>(In millions)</i>	
Equity method	\$303.5	\$317.6
Cost method	10.4	10.6
Total power projects	\$313.9	\$328.2

Our percentage voting interest in qualifying facilities and domestic power projects accounted for under the equity method ranges from 16% to 50%. Equity in earnings of these power projects were \$18.0 million in 2004, \$2.1 million in 2003, and \$9.1 million in 2002.

Our power projects include investments of \$240.2 million in 2004 and \$251.8 million in 2003 that sell electricity in California under power purchase agreements called "Interim Standard Offer No. 4" agreements.

Our other nonregulated businesses also held international energy projects accounted for under the equity method of \$4.5 million at December 31, 2004 and \$4.4 million at December 31, 2003.

Financial Investments

Financial investments recorded in "Other assets" consist of the following:

<i>At December 31,</i>	2004	2003
	<i>(In millions)</i>	
Financial limited partnerships	\$5.7	\$22.5
Leveraged leases	—	2.8
Total financial investments	\$5.7	\$25.3

Investments Classified as Available-for-Sale

We classify the following investments as available-for-sale:

- ◆ nuclear decommissioning trust funds, and
- ◆ trust assets securing certain executive benefits.

This means we do not expect to hold them to maturity, and we do not consider them trading securities.

We show the fair values, gross unrealized gains and losses, and amortized cost basis for all of our available-for-sale securities, in the following tables. We use specific identification to determine cost in computing realized gains and losses.

<i>At December 31, 2004</i>	Amortized Cost Basis	Unrealized Gains	Unrealized Losses	Fair Value
	<i>(In millions)</i>			
Marketable equity securities	\$786.1	\$72.5	\$(2.5)	\$ 856.1
Corporate debt and U.S. treasuries	73.7	0.7	(0.2)	74.2
State municipal bonds	94.3	2.9	(0.2)	97.0
Totals	\$954.1	\$76.1	\$(2.9)	\$1,027.3

<i>At December 31, 2003</i>	Amortized Cost Basis	Unrealized Gains	Unrealized Losses	Fair Value
	<i>(In millions)</i>			
Marketable equity securities	\$644.8	\$30.7	\$(22.2)	\$653.3
Corporate debt and U.S. treasuries	37.2	0.9	—	38.1
State municipal bonds	48.4	4.3	—	52.7
Totals	\$730.4	\$35.9	\$(22.2)	\$744.1

Certain prior-year amounts have been reclassified to conform with the current year's presentation.

In addition to the above securities, the nuclear decommissioning trust funds included \$30.6 million at December 31, 2004 and \$17.2 million at December 31, 2003 of cash and cash equivalents.

The preceding tables include \$73.3 million in 2004 of net unrealized gains and \$13.7 million in 2003 of net unrealized gains associated with the nuclear decommissioning trust funds that are reflected as a change in the nuclear decommissioning trust funds in our Consolidated Balance Sheets.

We have unrealized losses relating to certain available-for-sale investments included in our decommissioning trust funds. We believe these losses are temporary in nature and expect the investments to recover their value in the future given the long-term nature of these investments. Decommissioning will not occur until the operating licenses for our nuclear facilities expire. We show the fair values and unrealized losses of our investments that were in a loss position at December 31, 2004 and 2003.

At December 31, 2004

Description of Securities	Less than 12 months		12 months or more		Total	
	Fair Value	Unrealized Losses	Fair Value	Unrealized Losses	Fair Value	Unrealized Losses
<i>(In millions)</i>						
Marketable equity securities	\$ 23.6	\$(2.4)	\$ —	\$ —	\$ 23.6	\$(2.4)
Corporate debt and U.S. treasuries	15.3	(0.1)	10.1	(0.1)	25.4	(0.2)
State municipal bonds	18.7	(0.2)	3.3	—	22.0	(0.2)
Total temporarily impaired securities	\$ 57.6	\$(2.7)	\$ 13.4	\$ (0.1)	\$ 71.0	\$(2.8)

At December 31, 2003

Description of Securities	Less than 12 months		12 months or more		Total	
	Fair Value	Unrealized Losses	Fair Value	Unrealized Losses	Fair Value	Unrealized Losses
<i>(In millions)</i>						
Marketable equity securities	\$210.7	\$(2.7)	\$308.2	\$(19.2)	\$518.9	\$(21.9)
Corporate debt and U.S. treasuries	16.9	—	—	—	16.9	—
State municipal bonds	—	—	0.7	—	0.7	—
Total temporarily impaired securities	\$227.6	\$(2.7)	\$308.9	\$(19.2)	\$536.5	\$(21.9)

Gross and net realized gains and losses on available-for-sale securities, excluding the gains on our sales of the Orion investment, were as follows:

	2004	2003	2002
<i>(In millions)</i>			
Gross realized gains	\$ 4.1	\$ 6.7	\$ 6.0
Gross realized losses	(7.7)	(6.1)	(9.5)
Net realized (losses) gains	\$(3.6)	\$ 0.6	\$(3.5)

Gross realized losses for 2004 include \$4.5 million pre-tax impairment charge we recognized on a nuclear decommissioning trust fund investment that we believed represented an other than temporary decline in value.

The corporate debt securities, U.S. Government agency obligations, and state municipal bonds mature on the following schedule:

At December 31, 2004

	<i>(In millions)</i>
Less than 1 year	\$ 15.6
1-5 years	42.2
5-10 years	69.3
More than 10 years	44.1
Total maturities of debt securities	\$ 171.2

5 Intangible Assets

Goodwill

Goodwill is the cost of an acquisition less the fair value of the net assets acquired. Our goodwill balance is primarily related to our merchant energy business acquisitions that occurred in 2002 and 2003. We discuss our acquisitions in more detail in *Note 15*. The changes in the carrying amount of goodwill for the years ended December 31, 2004 and 2003 are as follows:

2004	Balance at January 1,	Goodwill Acquired	Other(a)	Balance at December 31,
		<i>(In millions)</i>		
Goodwill	\$ 146.3	\$ —	\$ (1.5)	\$ 144.8

2003	Balance at January 1,	Goodwill Acquired	Other(a)	Balance at December 31,
		<i>(In millions)</i>		
Goodwill	\$118.2	\$27.5	\$ 0.6	\$146.3

(a) Other represents purchase price adjustments

Goodwill is not amortized, rather it is evaluated for impairment at least annually. We evaluated our goodwill in 2004 and determined that it was not impaired. For tax purposes, \$115.7 million of our goodwill balance is deductible.

Intangible Assets Subject to Amortization

Intangible assets with finite lives are subject to amortization over their estimated useful lives. The primary assets included in this category are as follows:

At December 31,	2004			2003		
	Gross Carrying Amount	Accumul- ated Amortiz- ation	Net Asset	Gross Carrying Amount	Accumul- ated Amortiz- ation	Net Asset
	<i>(In millions)</i>					
Software	\$388.4	\$205.4	\$183.0	\$285.6	\$155.1	\$130.5
Acquired energy contracts (net)	185.2	84.8	100.4	182.5	36.7	145.8
Permits and licenses	37.7	5.7	32.0	28.8	3.2	25.6
Operating manuals and procedures	38.6	4.5	34.1	12.5	2.7	9.8
Other	20.0	12.1	7.9	22.6	10.7	11.9
Total	\$669.9	\$312.5	\$357.4	\$532.0	\$208.4	\$323.6

BGE recorded intangible assets with a gross carrying amount of \$253.1 million and accumulated amortization of \$161.2 million in 2004 and a gross carrying amount of \$212.2 million and accumulated amortization of \$127.3 million in 2003 and are included in the table above. Substantially all of BGE's intangible assets relate to software.

Acquired energy contracts (net) represent the fair value of a contract at the time of contract acquisition, which includes contracts acquired as part of a business, asset, or portfolio acquisition. Energy contracts acquired in connection with a business combination can either be an asset or a liability and are reflected on a net basis in the table above.

We recognized amortization expense related to our intangible assets as follows:

- ◆ \$114.2 million, of which BGE recognized \$41.4 million, during 2004
- ◆ \$84.6 million, of which BGE recognized \$33.0 million, during 2003, and
- ◆ \$46.4 million, of which BGE recognized \$29.2 million, during 2002.

The following is our, and BGE's, estimated amortization expense for 2005 through 2009 for the intangible assets included in our, and BGE's, Consolidated Balance Sheets at December 31, 2004:

Year Ended December 31,	2005	2006	2007	2008	2009
	<i>(In millions)</i>				
Estimated amortization expense— Nonregulated businesses	\$53.6	\$51.9	\$36.1	\$31.2	\$27.8
Estimated amortization expense— BGE	31.0	22.4	22.1	21.4	21.2
Total estimated amortization expense—Constellation Energy	\$84.6	\$74.3	\$58.2	\$52.6	\$49.0

6 Regulatory Assets (net)

As discussed in *Note 1*, the Maryland PSC and the FERC provide the final determination of the rates we charge our customers for our regulated businesses. Generally, we use the same accounting policies and practices used by nonregulated companies for financial reporting under accounting principles generally accepted in the United States of America. However, sometimes the Maryland PSC or FERC orders an accounting treatment different from that used by nonregulated companies to determine the rates we charge our customers. When this happens, we must defer certain regulated expenses and income in our Consolidated Balance Sheets as regulatory assets and liabilities. We then record them in our Consolidated Statements of Income (using amortization) when we include them in the rates we charge our customers.

We summarize regulatory assets and liabilities in the following table, and we discuss each of them separately below.

<i>At December 31,</i>	2004	2003
	<i>(In millions)</i>	
Electric generation-related regulatory asset	\$ 192.4	\$ 211.3
Net cost of removal	(132.5)	(147.8)
Income taxes recoverable through future rates (net)	74.9	81.8
Deferred postretirement and postemployment benefit costs	25.8	29.0
Deferred environmental costs	17.6	20.4
Deferred fuel costs (net)	5.9	11.9
Workforce reduction costs	14.1	21.2
Other (net)	(2.8)	1.7
Total regulatory assets (net)	\$ 195.4	\$ 229.5

Electric Generation-Related Regulatory Asset

As a result of the deregulation of electric generation, BGE does not meet the requirements for the application of SFAS No. 71 for the electric generation portion of its business. In accordance with SFAS No. 101, *Regulated Enterprises—Accounting for the Discontinuation of Application of FASB Statement No. 71*, and EITF 97-4, *Deregulation of the Pricing of Electricity—Issues Related to the Application of FASB Statements No. 71 and 101*, all individual generation-related regulatory assets and liabilities must be eliminated from our balance sheet unless these regulatory assets and liabilities will be recovered in the regulated portion of the business. BGE wrote-off all of its individual, generation-related regulatory assets and liabilities. BGE established a single, new generation-related regulatory asset for amounts to be collected through its regulated transmission and distribution business. The new regulatory asset is being amortized on a basis that approximates the pre-existing individual regulatory asset amortization schedules.

A portion of this regulatory asset represents the decommissioning and decontamination fund payment for federal uranium enrichment facilities that do not earn a return on the rate base investment. These amounts were \$10.5 million at December 31, 2004 and \$13.4 million at December 31, 2003. Prior to the deregulation of electric generation, these costs were recovered through the electric fuel rate mechanism, and were excluded from rate base. We will continue to amortize this amount through 2008.

Net Cost of Removal

As discussed in *Note 1*, we use the composite depreciation method for the regulated business. This method is currently an acceptable method of accounting under accounting principles generally accepted in the United States of America and is widely used in the energy, transportation, and telecommunication industries.

Historically, under the composite depreciation method, the anticipated costs of removing assets upon retirement were provided for over the life of those assets as a component of depreciation expense. However, effective January 1, 2003, we adopted SFAS No. 143, *Accounting for Asset Retirement Obligations*. In addition to providing the accounting requirements for recognizing an estimated liability for legal obligations associated with the retirement of tangible long-lived assets, SFAS No. 143 precludes the recognition of expected net future costs of removal as a component of depreciation expense or accumulated depreciation.

BGE is required by the Maryland PSC to use the composite depreciation method, including cost of removal, under regulatory accounting. In accordance with SFAS No. 71, BGE continues to accrue for the future cost of removal for its regulated gas and electric assets by increasing its regulatory liability. This liability is relieved when actual removal costs are incurred.

Income Taxes Recoverable Through Future Rates (net)

As described in *Note 1*, income taxes recoverable through future rates are the portion of our net deferred income tax liability that is applicable to our regulated business, but has not been reflected in the rates we charge our customers. These income taxes represent the tax effect of temporary differences in depreciation and the allowance for equity funds used during construction, offset by differences in deferred tax rates and deferred taxes on deferred investment tax credits. We amortize these amounts as the temporary differences reverse.

Deferred Postretirement and Postemployment Benefit Costs

Deferred postretirement and postemployment benefit costs are the costs we recorded under SFAS No. 106, *Employers' Accounting for Postretirement Benefits Other Than Pensions*, and SFAS No. 112, *Employers' Accounting for Postemployment Benefits*, in excess of the costs we included in the rates we charge our customers. We began amortizing these costs over a 15-year period in 1998.

Deferred Environmental Costs

Deferred environmental costs are the estimated costs of investigating and cleaning up contaminated sites we own. We discuss this further in *Note 12*. We are amortizing \$21.6 million of these costs (the amount we had incurred through October 1995) and \$6.4 million of these costs (the amount we incurred from November 1995 through June 2000) over 10-year periods in accordance with the Maryland PSC's orders.

Deferred Fuel Costs

As described in *Note 1*, deferred fuel costs are the difference between our actual costs of natural gas and our fuel rate revenues collected from customers. We reduce deferred fuel costs as we collect them from or refund them to our customers.

In December 2002, a Hearing Examiner from the Maryland PSC issued a proposed order related to our annual gas adjustment clause review disallowing \$7.7 million of a previously established regulatory asset of \$9.4 million for certain credits that were over-refunded to customers through our market-based rates. BGE reserved the \$7.7 million as disallowed fuel costs in the fourth quarter of 2002. In August 2003, the Maryland PSC issued an order authorizing us to recover the \$7.7 million and we reinstated the \$9.4 million regulatory asset.

We exclude gas deferred fuel costs from rate base because their existence is relatively short-lived. These costs are recovered in the following year through our gas cost adjustment clauses.

Workforce Reduction Costs

The portions of the costs associated with our VSERP and workforce reduction programs that relate to BGE's gas business are deferred as regulatory assets in accordance with the Maryland PSC's orders in prior rate cases. These costs are amortized over 5-year periods.

7

Pension, Postretirement, Other Postemployment, and Employee Savings Plan Benefits

We offer pension, postretirement, other postemployment, and employee savings plan benefits. BGE employees participate in the benefit plans that we offer. We describe each of our plans separately below. Nine Mile Point offers its own pension, postretirement, other postemployment, and employee savings plan benefits to its employees. The benefits for Nine Mile Point are included in the tables beginning on the next page.

We use a December 31 measurement date for our pension, postretirement, other postemployment, and employee savings plans.

Pension Benefits

We sponsor several defined benefit pension plans for our employees. These include basic qualified plans that most employees participate in and several nonqualified plans that are available only to certain employees. A defined benefit plan specifies the amount of benefits a plan participant is to receive using information about the participant. Employees do not contribute to these plans. Generally, we calculate the benefits under these plans based on age, years of service, and pay.

Sometimes we amend the plans retroactively. These retroactive plan amendments require us to recalculate benefits related to participants' past service. We amortize the change in the benefit costs from these plan amendments on a straight-line basis over the average remaining service period of active employees.

We fund the qualified plans by contributing at least the minimum amount required under Internal Revenue Service (IRS) regulations. We calculate the amount of funding using an actuarial method called the projected unit credit cost method. The assets in all of the plans at December 31, 2004 and 2003 were mostly marketable equity and fixed income securities.

Postretirement Benefits

We sponsor defined benefit postretirement health care and life insurance plans that cover the vast majority of our employees. Generally, we calculate the benefits under these plans based on age, years of service, and pension benefit levels or final base pay. We do not fund these plans.

For nearly all of the health care plans, retirees make contributions to cover a portion of the plan costs.

Contributions for employees who retire after June 30, 1992 are calculated based on age and years of service. The amount of retiree contributions increases based on expected increases in medical costs. For the life insurance plan, retirees do not make contributions to cover a portion of the plan costs.

Effective in 2002, we amended our postretirement medical plans for all subsidiaries other than Nine Mile Point. Our contributions for retiree medical coverage for future retirees that were under the age of 55 on January 1, 2002 are capped at the 2002 level. We also amended our plans to increase the Medicare eligible retirees' share of medical costs.

In 2003, the President signed into law the Medicare Prescription Drug Improvement and Modernization Act of 2003 (the Act). This legislation provides a prescription drug benefit for Medicare beneficiaries, a benefit that we provide to our Medicare eligible retirees. Our actuaries concluded that prescription drug benefits available under our postretirement medical plan are currently "actuarially equivalent" to Medicare Part D and thus qualify for the subsidy under the Act. This conclusion requires that we meet both the "gross test" and "net test" regulations. Our prescription drug plan provides a higher level of benefits than Medicare Part D, thereby satisfying the "gross test". Our share of these costs exceeds that of Medicare Part D, thereby satisfying the "net test" method.

The expected subsidy will offset or reduce our share of the cost of the underlying postretirement prescription drug coverage. The estimated impact of this legislation reduced our Accumulated Postretirement Benefit Obligation by \$30.6 million at January 1, 2004 and our annual postretirement benefit expense in 2004 by \$4.0 million. Final implementation guidance was issued in January 2005. This guidance will not have a material impact on our estimated impact of this legislation. This subsidy will reduce estimated 2006 cash per capita medical costs from \$3,199 to \$2,671, or 17%.

Additional Minimum Pension Liability Adjustment

Our pension accumulated benefit obligation has exceeded the fair value of our plan assets since 2001. At December 31, 2004 and 2003, our pension obligations were greater than the fair value of our plan assets for our qualified and our nonqualified pension plans as follows:

At December 31, 2004	Qualified Plans		Non-Qualified Plans	Total
	Nine Mile	Other		
	(In millions)			
Accumulated benefit obligation	\$122.1	\$1,185.9	\$46.1	\$1,354.1
Fair value of assets	78.6	1,005.8	—	1,084.4
Unfunded obligation	\$ 43.5	\$ 180.1	\$46.1	\$ 269.7

At December 31, 2003	Qualified Plans		Non-Qualified Plans	Total
	Nine Mile	Other		
	(In millions)			
Accumulated benefit obligation	\$98.3	\$1,044.9	\$37.1	\$1,180.3
Fair value of assets	66.7	887.9	—	954.6
Unfunded obligation	\$31.6	\$ 157.0	\$37.1	\$ 225.7

As required under SFAS No. 87, we recorded additional minimum pension liability adjustments as follows:

	Pension Liability Adjustment	Intangible Asset *	Increase (Decrease)	
			Pre-tax	Accumulated Other Comprehensive Income (Loss) After-tax
	(In millions)			
2001	\$133.0	\$59.0	\$ (74.0)	\$ (44.7)
2002	189.5	(5.8)	(195.3)	(118.1)
2003	(27.3)	(6.5)	20.8	12.6
2004	64.4	(6.1)	(70.5)	(42.6)
Total	\$359.6	\$40.6	\$(319.0)	\$(192.8)

* Included in "Other assets" in our Consolidated Balance Sheets.

Obligations, Assets, and Funded Status

In June 2004, we assumed pension and postretirement benefit obligations for new employees in connection with the acquisition of the R.E. Ginna Nuclear Plant (Ginna). The sellers of Ginna transferred assets into our qualified plan trust. We discuss the Ginna acquisition further in Note 15. As a result of a workforce reduction initiative in the generation business, pension and postretirement special termination benefits were recorded in December 2004. We discuss the workforce reduction initiative further in Note 2. We show the change in the benefit obligations, plan assets, and funded status of the pension and postretirement benefit plans in the following tables.

	Pension Benefits		Postretirement Benefits	
	2004	2003	2004	2003
	(In millions)			
Change in benefit obligation				
Benefit obligation at January 1	\$1,326.0	\$1,247.5	\$430.8	\$415.4
Service cost	40.1	33.7	6.5	6.1
Interest cost	82.4	81.3	22.6	26.3
Plan participants' contributions	—	—	5.8	6.1
Actuarial loss (gain)	117.1	76.0	(17.2)	11.4
Plan amendments	—	(0.4)	—	—
Ginna acquisition	40.5	—	6.1	—
Special termination benefits	2.4	—	1.2	—
Benefits paid (1)	(95.3)	(112.1)	(32.6)	(34.5)
Benefit obligation at December 31	\$1,513.2	\$1,326.0	\$423.2	\$430.8

(1) Benefits paid include annuity payments, lump-sum distributions, and transfers to nonqualified deferred compensation plans.

	Pension Benefits		Postretirement Benefits	
	2004	2003	2004	2003
(In millions)				
Change in plan assets

Ginna acquisition	50.8	—	—	—
Benefits paid (1)	(95.3)	(112.1)	(32.6)	(34.5)
Fair value of plan assets at December 31	\$1,084.4	\$ 954.6	\$ —	\$ —

(1) Benefits paid include annuity payments, lump-sum distributions, and transfers to nonqualified deferred compensation plans.

At December 31,	Pension Benefits		Postretirement Benefits	
	2004	2003	2004	2003
(In millions)				
Funded Status				
Funded Status	\$(428.8)	\$(371.4)	\$(423.2)	\$(430.8)
Unrecognized net actuarial loss	480.8	397.0	121.1	140.6
Unrecognized prior service cost	37.9	43.9	(36.7)	(40.2)
Unrecognized transition obligation	—	—	17.0	19.2
Pension liability adjustment	(359.6)	(295.2)	—	—
Accrued benefit cost	\$(269.7)	\$(225.7)	\$(321.8)	\$(311.2)

Net Periodic Benefit Cost

We show the components of net periodic pension benefit cost in the following table:

Year Ended December 31,	2004	2003	2002
(In millions)			
Components of net periodic pension benefit cost			
Service cost	\$ 40.1	\$ 33.7	\$ 29.6
Interest cost	82.3	81.3	82.2
Expected return on plan assets	(97.9)	(95.0)	(91.0)
Amortization of unrecognized prior service cost	5.8	5.8	6.7
Recognized net actuarial loss	14.3	5.0	1.3
Amount capitalized as construction cost	(4.5)	(2.6)	(2.9)
Net periodic pension benefit cost (1)	\$ 40.1	\$ 28.2	\$ 25.9

(1) Net periodic pension benefit cost excludes SFAS No. 88 settlement charge of \$2.8 million and termination benefits of \$2.4 million in 2004, SFAS No. 88 settlement charge of \$2.8 million in 2003, and SFAS No. 88 settlement charge of \$29.6 million and termination benefits of \$43.0 million in 2002. BGE's portion of our net periodic pension benefit costs was \$8.6 million in 2004, \$4.3 million in 2003, and \$5.0 million in 2002.

We show the components of net periodic postretirement benefit cost in the following table:

Year Ended December 31,	2004	2003	2002
(In millions)			
Components of net periodic postretirement benefit cost			
Service cost	\$ 6.5	\$ 6.1	\$ 5.0
Interest cost	22.6	26.3	26.7
Amortization of transition obligation	2.1	2.1	2.1
Recognized net actuarial loss	3.1	5.8	6.4
Amortization of unrecognized prior service cost	(3.5)	(3.5)	(3.5)
Amount capitalized as construction cost	(7.0)	(8.8)	(9.1)
Net periodic postretirement benefit cost (1)	\$ 23.8	\$ 28.0	\$ 27.6

(1) Net periodic postretirement benefit cost excludes SFAS No. 106 termination benefits of \$1.2 million in 2004 and \$9.2 million in 2002. BGE's portion of our net periodic postretirement benefit cost was \$15.1 million in 2004, \$19.4 million in 2003, and \$21.1 million in 2002.

Expected Cash Benefit Payments

The pension and postretirement benefits we expect to pay in each of the next five calendar years and in the aggregate for the subsequent five years are shown below. These estimated benefits are based on the same assumption used to measure the benefit obligation at December 31, 2004, but includes benefits attributable to estimated future employee service.

	Pension Benefits	Postretirement Benefits	
		Before Medicare Part D	After Medicare Part D
(In millions)			
2005	\$ 90.6	\$ 26.5	\$ —
2006	83.0	28.2	2.1
2007	85.5	29.6	2.3
2008	87.9	30.4	2.4
2009	92.1	31.1	2.6
2010-2014	553.3	164.4	14.4

Assumptions

We made the assumptions below to calculate our pension and postretirement benefit obligations and periodic cost.

	Pension Benefits		Postretirement Benefits		Assumption Impacts Calculation of
	2004	2003	2004	2003	
Discount rate	5.75%	6.25%	5.75%	6.25%	Benefit Obligation and Periodic Cost
Expected return on plan assets	9.0	9.0	N/A	N/A	Periodic Cost
Rate of compensation increase	4.0	4.0	4.0	4.0	Benefit Obligation and Periodic Cost

Our 9.0% overall expected long-term rate of return on plan assets reflects our long-term investment strategy in terms of asset mix targets and expected returns for each asset class.

Annual health care inflation rate assumptions also impact the calculation of our postretirement benefit obligation and periodic cost. We assumed the following health care inflation rates to produce average claims by year as shown below:

<i>At December 31,</i>	2004	2003
Next year	10.0%	8.0%
Following year	9.0%	6.0%
Ultimate trend rate	5.0%	5.0%
Year ultimate trend rate reached	2010	2010

A one-percent increase in the health care inflation rate from the assumed rates would increase the accumulated postretirement benefit obligation by approximately \$31.9 million as of December 31, 2004 and would increase the combined service and interest costs of the postretirement benefit cost by approximately \$2.0 million annually.

A one-percent decrease in the health care inflation rate from the assumed rates would decrease the accumulated postretirement benefit obligation by approximately \$26.9 million as of December 31, 2004 and would decrease the combined service and interest costs of the postretirement benefit cost by approximately \$1.7 million annually.

Qualified Pension Plan Assets

The asset allocations for our qualified pension plans were as follows:

<i>At December 31,</i>	2004	2003
Equity securities	57%	56%
Debt securities	33	32
Other	10	12
Total	100%	100%

The category "Other" primarily represents investments in financial limited partnerships. Our long-term pension plan investment strategy is to seek an asset mix of 53% equity, 35% fixed income, and 12% other investments. We rebalance our portfolio periodically when the sum of equity and other investments differs from 65% by three percentage points or more, we change an outside investment advisor, or we make contributions to the trust.

Contributions and Benefit Payments

We contributed an additional \$50 million to our qualified pension plans in March 2005, even though there is no IRS required minimum contribution in 2005.

Our non-qualified pension plans and our postretirement benefit programs are not funded. We estimate that we will incur approximately \$2.7 million in pension benefits for our non-qualified pension plans and approximately \$26.5 million for retiree health and life insurance costs during 2005.

Other Postemployment Benefits

We provide the following postemployment benefits:

- ◆ health and life insurance benefits to eligible employees determined to be disabled under our Disability Insurance Plan,
- ◆ income replacement payments for Nine Mile Point union-represented employees determined to be disabled, and
- ◆ income replacement payments for other employees determined to be disabled before November 1995 (payments for employees determined to be disabled after that date are paid by an insurance company, and the cost is paid by employees).

The liability for these benefits totaled \$53.5 million as of December 31, 2004 and \$50.6 million as of December 31, 2003.

We assumed the discount rate for other postemployment benefits to be 5.0% in 2004 and 5.25% in 2003. This assumption impacts the calculation of our other postemployment benefit obligation and periodic cost.

Employee Savings Plan Benefits

We sponsor defined contribution savings plans that are offered to all eligible employees. The savings plans are qualified 401(k) plans under the Internal Revenue Code. In a defined contribution plan, the benefits a participant is to receive result from regular contributions to a participant account. Matching contributions to participant accounts are made under these plans. Matching contributions to these plans were:

- ◆ \$16.7 million, of which BGE contributed \$4.7 million, in 2004,
- ◆ \$14.1 million, of which BGE contributed \$4.6 million, in 2003, and
- ◆ \$13.3 million, of which BGE contributed \$4.9 million, in 2002.

8 Credit Facilities and Short-Term Borrowings

Our short-term borrowings may include bank loans, commercial paper, and bank lines of credit. Short-term borrowings mature within one year from the date of issuance. We pay commitment fees to banks for providing us lines of credit. When we borrow under the lines of credit, we pay market interest rates.

Constellation Energy

Constellation Energy had committed bank lines of credit under four credit facilities of \$2.2 billion at December 31, 2004 for short-term financial needs as follows:

- ◆ \$640.0 million three-year revolving credit facility expiring in June 2005,
- ◆ \$447.5 million three-year revolving credit facility expiring in June 2006,
- ◆ \$800.0 million three-year revolving credit facility expiring in June 2007, and
- ◆ \$300.0 million five-year revolving credit facility expiring in June 2009,

We use these facilities to allow issuance of commercial paper and letters of credit primarily for our merchant energy business. These facilities can issue letters of credit up to approximately \$2.2 billion. Letters of credit issued under all of our facilities totaled \$809.9 million at December 31, 2004 and \$507.1 million at December 31, 2003. Constellation Energy had no commercial paper outstanding at December 31, 2004 and 2003.

BGE

BGE had no commercial paper outstanding at December 31, 2004 and 2003.

During 2004, certain credit facilities expired and BGE renewed those facilities. BGE continues to maintain \$200.0 million in committed credit facilities, expiring May 2005 through November 2005. BGE can borrow directly from the banks or use the facilities to allow the issuance of commercial paper.

Other Nonregulated Businesses

Our other nonregulated businesses had no short-term borrowings outstanding at December 31, 2004 and \$9.6 million at December 31, 2003. The weighted-average effective interest rates for our other nonregulated businesses' short-term borrowings were 3.11% at December 31, 2003.

9 Long-Term Debt and Preference Stock

Long-term Debt

Long-term debt matures in one year or more from the date of issuance. We detail our long-term debt in our Consolidated Statements of Capitalization. As you read this section, it may be helpful to refer to those statements.

Constellation Energy

During 2004, we decided to continue our ownership in a synthetic fuel processing facility in South Carolina. We discuss this facility in more detail in *Note 10*. In connection with our decision to continue with our ownership in this facility, we are committed to making fixed payments until the end of 2007. Accordingly, during 2004, we recorded a liability of \$39.3 million, net of discount related to imputed interest, in "Long-term debt" in our Consolidated Balance Sheets for these fixed payments. We used an imputed interest rate because there was no stated interest rate on these fixed payments. The imputed interest rate was calculated to be 3.47% and was based on our borrowing rate for a similar loan.

In connection with the sale of our geothermal generating facility in Hawaii, we repaid prior to maturity \$43.3 million of long-term debt. We discuss the sale of this facility in more detail in *Note 2*.

BGE

BGE's First Refunding Mortgage Bonds

BGE's first refunding mortgage bonds are secured by a mortgage lien on all of its assets. The generating assets BGE transferred to subsidiaries of Constellation Energy also remain subject to the lien of BGE's mortgage, along with the stock of Safe Harbor Water Power Corporation and Constellation Enterprises, Inc.

BGE is required to make an annual sinking fund payment each August 1 to the mortgage trustee. The amount of the payment is equal to 1% of the highest principal amount of bonds outstanding during the preceding 12 months. The trustee uses these funds to retire bonds from any series through repurchases or calls for early redemption. However, the trustee cannot call the following bonds for early redemption:

- ◆ 7½% Series, due 2007
- ◆ 6¾% Series, due 2008

Holders of the Remarketed Floating Rate Series due September 1, 2006 have the option to require BGE to repurchase their bonds at face value on September 1 of each year. BGE is required to repurchase and retire at par any bonds that are not remarketed or purchased by the remarketing agent. BGE also has the option to redeem all or some of these bonds at face value each September 1.

During 2004, BGE called \$4.8 million principal amount of its Remarketed Floating Rate Series due September 1, 2006 to satisfy the sinking fund requirement under the First Refunding Mortgage Bond indenture. These bonds were redeemed in whole or in part at the sinking fund call price of 100% of principal amount plus accrued interest from June 1, 2004 to, but not including, August 25, 2004.

BGE's Other Long-Term Debt

On July 1, 2000, BGE transferred \$278.0 million of tax-exempt debt to our merchant energy business related to the transferred assets. At December 31, 2004, BGE remains contingently liable for the \$269.8 million outstanding balance of this debt.

We show the weighted-average interest rates and maturity dates for BGE's fixed-rate medium-term notes outstanding at December 31, 2004 in the following table.

Series	Weighted-Average Interest Rate	Maturity Dates
B	8.63%	2006
D	6.62	2005-2006
E	6.66	2006-2012
G	6.08	2008

Some of the medium-term notes include a "put option." These put options allow the holders to sell their notes back to BGE on the put option dates at a price equal to 100% of the principal amount. The following is a summary of medium-term notes with put options.

Series E Notes	Principal (In millions)	Put Option Dates
6.75%, due 2012	\$59.5	June 2007
6.75%, due 2012	25.0	June 2007
6.73%, due 2012	25.0	June 2007

BGE Deferrable Interest Subordinated Debentures

On November 21, 2003, BGE Capital Trust II (BGE Trust II), a Delaware statutory trust established by BGE, issued 10,000,000 Trust Preferred Securities for \$250 million (\$25 liquidation amount per preferred security) with a distribution rate of 6.20%.

BGE Trust II used the net proceeds from the issuance of common securities to BGE and the Trust Preferred Securities to purchase a series of 6.20% Deferrable Interest Subordinated Debentures due October 15, 2043 (6.20% debentures) from BGE in the aggregate principal amount of \$257.7 million with the same terms as the Trust Preferred Securities. BGE Trust II must redeem the Trust Preferred Securities at \$25 per preferred security plus accrued but unpaid distributions when the 6.20% debentures are paid at maturity or upon any earlier redemption. BGE has the option to redeem the 6.20% debentures at any time on or after November 21, 2008 or at any time when certain tax or other events occur.

BGE Trust II will use the interest paid on the 6.20% debentures to make distributions on the Trust Preferred Securities. The 6.20% debentures are the only assets of BGE Trust II.

BGE fully and unconditionally guarantees the Trust Preferred Securities based on its various obligations relating to the trust agreement, indentures, 6.20% debentures, and the preferred security guarantee agreement.

For the payment of dividends and in the event of liquidation of BGE, the 6.20% debentures are ranked prior to preference stock and common stock.

At December 31, 2003, we applied the provisions of FIN 46R as it relates to special purpose entities. FIN 46R establishes conditions under which an entity must be consolidated based upon variable interests rather than voting interests. FIN 46R requires us to consolidate variable interest entities for which we are the primary beneficiary. Therefore, at December 31, 2003, we and BGE deconsolidated BGE Trust II because BGE is not its primary beneficiary. As a result, we and BGE removed the Trust Preferred Securities from our and BGE's Consolidated Balance Sheets and from our Consolidated Statements of Capitalization as of December 31, 2003. At December 31, 2004 and 2003, we and BGE recorded the \$257.7 million of 6.20% Deferrable Interest Subordinated Debentures due to BGE Trust II and recorded our and BGE's \$7.7 million equity investment in BGE Trust II in "Other assets" in our and BGE's Consolidated Balance Sheets. We discuss FIN 46R in more detail in *Accounting Standards Adopted* section in *Note 1*.

Other Nonregulated Businesses

In 2004, we terminated certain loans under other revolving credit agreements of \$41.4 million related to our Panamanian distribution facility. We replaced these revolving credit agreements with loans under new revolving credit agreements totaling \$100.0 million.

Revolving Credit Agreement

On December 18, 2001, ComfortLink entered into a \$25.0 million loan agreement with the Maryland Energy Financing Administration (MEFA). The terms of the loan exactly match the terms of variable rate, tax exempt bonds due December 1, 2031 issued by MEFA for ComfortLink to finance the cost of building a chilled water distribution system. The interest rate on this debt resets weekly. These bonds, and the corresponding loan, can be redeemed at any time at par plus accrued interest while under variable rates. The bonds can also be converted to a fixed rate at ComfortLink's option.

Debt Compliance and Covenants

The credit facilities of Constellation Energy and BGE have limited material adverse change clauses that only consider a material change in financial condition and are not directly affected by decreases in credit ratings. If these clauses are invoked, the lending institutions can decline making new advances or issuing new letters of credit, but cannot accelerate existing amounts outstanding. The long-term debt indentures of Constellation Energy and BGE do not contain material adverse change clauses or financial covenants.

Certain credit facilities of Constellation Energy contain a provision requiring Constellation Energy to maintain a ratio of debt to capitalization equal to or less than 65%. At December 31, 2004, the debt to capitalization ratio as defined in the credit agreements was no greater than 51%.

Certain credit agreements of BGE contain provisions requiring BGE to maintain a ratio of debt to capitalization equal to or less 65%. At December 31, 2004, the debt to capitalization ratio for BGE as defined in these credit agreements was 46%. At December 31, 2004, no amounts were outstanding under these agreements.

Failure by Constellation Energy, or BGE, to comply with these covenants could result in the maturity of the debt outstanding under these facilities being accelerated. The credit facilities of Constellation Energy contain usual and customary cross-default provisions that apply to defaults on debt by Constellation Energy and certain subsidiaries over a specified threshold. Certain BGE credit facilities also contain usual and customary cross-default provisions that apply to defaults on debt by BGE over a specified threshold. The indentures pursuant to which BGE has issued and outstanding mortgage bonds and subordinated debentures provide that a default under any debt instrument issued under the relevant indenture may cause a default of all debt outstanding under such indenture.

Constellation Energy also provides credit support to Calvert Cliffs, Ginna, and Nine Mile Point to ensure these plants have funds to meet expenses and obligations to safely operate and maintain the plants.

Maturities of Long-Term Debt

All of our long-term borrowings mature on the following schedule (includes sinking fund requirements):

Year	Constellation Energy	Nonregulated Businesses	BGE
		(In millions)	
2005	\$ 300.0	\$ 14.5	\$ 41.6
2006	—	20.1	442.9
2007	600.0	19.5	122.4
2008	—	8.3	296.0
2009	500.0	10.0	11.5
Thereafter	1,963.3	364.8	589.2
Total long-term debt at December 31, 2004	\$3,363.3	\$437.2	\$1,503.6

At December 31, 2004, we had long-term loans totaling \$381.6 million that mature after 2004 which contain certain put options under which lenders could potentially require us to repay the debt prior to maturity. At December 31, 2004, \$124.3 million is classified as current portion of long-term debt as a result of these provisions.

Weighted-Average Interest Rates for Variable Rate Debt

Our weighted-average interest rates for variable rate debt were:

At December 31,	2004	2003
<i>Nonregulated Businesses (including Constellation Energy)</i>		
Loans under credit agreements	3.58%	3.98%
Tax-exempt debt transferred from BGE	1.54	1.40
<i>BGE</i>		
Remarketed floating rate series mortgage bonds	1.39%	1.29%

As discussed in *Note 13* we have entered into interest rate swaps relating to \$450 million of our fixed-rate debt.

Preference Stock

Each series of BGE preference stock has no voting power, except for the following:

- ◆ the preference stock has one vote per share on any charter amendment which would create or authorize any shares of stock ranking prior to or on a parity with the preference stock as to either dividends or distribution of assets, or which would substantially adversely affect the contract rights, as expressly set forth in BGE's charter, of the preference stock, each of which requires the affirmative vote of two-thirds of all the shares of preference stock outstanding; and
- ◆ whenever BGE fails to pay full dividends on the preference stock and such failure continues for one year, the preference stock shall have one vote per share on all matters, until and unless such dividends shall have been paid in full. Upon liquidation, the holders of the preference stock of each series outstanding are entitled to receive the par amount of their shares and an amount equal to the unpaid accrued dividends.

10 Taxes

The components of income tax expense are as follows:

<i>Year Ended December 31,</i>	2004	2003	2002
	<i>(Dollar amounts in millions)</i>		
Income Taxes			
Current			
Federal	\$ 33.9	\$134.0	\$145.0
State	22.1	33.6	24.2
Current taxes charged to expense	56.0	167.6	169.2
Deferred			
Federal	98.5	93.2	131.2
State	24.9	16.0	17.1
Deferred taxes charged to expense	123.4	109.2	148.3
Investment tax credit adjustments	(7.2)	(7.3)	(7.9)
Income taxes per Consolidated Statements of Income	\$172.2	\$269.5	\$309.6

Total income taxes are different from the amount that would be computed by applying the statutory Federal income tax rate of 35% to book income before income taxes as follows:

Reconciliation of Income Taxes Computed at Statutory Federal Rate to Total Income Taxes			
Income before income taxes (excluding BGE preference stock dividends)	\$774.2	\$758.4	\$848.4
Statutory federal income tax rate	35%	35%	35%
Income taxes computed at statutory federal rate	271.0	265.4	296.9
Increases (decreases) in income taxes due to			
Depreciation differences not normalized on regulated activities	4.0	4.1	4.8
Amortization of deferred investment tax credits	(7.2)	(7.3)	(7.9)
Synthetic fuel tax credits flowed through to income	(123.2)	(35.0)	(20.7)
State income taxes, net of federal income tax benefit	30.0	34.1	31.4
Other	(2.4)	8.2	5.1
Total income taxes	\$172.2	\$269.5	\$309.6
Effective income tax rate	22.2%	35.5%	36.5%

BGE's effective tax rate was 38.1% in 2004, 39.2% in 2003, and 39.5% in 2002. The difference between BGE's effective tax rate and the 35% statutory federal income tax rate is primarily related to Maryland corporate income taxes at an effective rate of 4.55%, which is net of the related federal income tax benefit.

The major components of our net deferred income tax liability are as follows:

At December 31,	Constellation Energy		BGE	
	2004	2003	2004	2003
	(In millions)			
Deferred Income Taxes				
Deferred tax liabilities				
Net property, plant and equipment	\$1,522.7	\$1,373.0	\$ 540.5	\$ 501.4
Qualified nuclear decommissioning trust funds	317.6	252.6	—	—
Regulatory assets, net	95.1	105.7	95.1	105.7
Mark-to-market energy assets and liabilities, net	83.7	72.6	—	—
Financial investments and hedging instruments	—	39.9	—	—
Other	88.8	132.1	62.6	63.1
Total deferred tax liabilities	2,107.9	1,975.9	698.2	670.2
Deferred tax assets				
Asset retirement obligation	327.3	235.3	—	—
Accrued pension and post-employment benefit costs	194.0	183.3	58.3	62.9
Financial investments and hedging instruments	10.3	—	—	—
Deferred investment tax credits	26.9	27.4	5.9	6.5
Reduction of investments	46.4	40.4	—	—
Other	104.7	109.4	15.7	15.0
Total deferred tax assets	709.6	595.8	79.9	84.4
Total deferred tax liability, net	1,398.3	1,380.1	618.3	585.8
Current portion of deferred tax liability, net—recorded in accrued expenses and other	95.0	68.3	10.3	9.6
Long-term portion of deferred tax liability, net	\$1,303.3	\$1,311.8	\$ 608.0	\$ 576.2

Synthetic Fuel Tax Credits

Our merchant energy business has investments in facilities that manufacture solid synthetic fuel produced from coal as defined under Section 29 of the Internal Revenue Code for which we can claim tax credits on our Federal income tax return through 2007. We recognize the tax benefit of these credits in our Consolidated Statements of Income when we believe it is highly probable that the credits will be sustained. The synthetic fuel process involves combining coal material with a chemical reagent to create a significant chemical change. A taxpayer may request a private letter ruling from the IRS to support its position that the synthetic fuel produced undergoes a significant chemical change and thus qualifies for Section 29 credits.

As of December 31, 2004, we have recognized cumulative tax benefits associated with Section 29 credits of \$201.2 million, of which \$123.2 million was recognized during the year ended December 31, 2004.

We own a minority ownership in four synthetic fuel facilities located in Virginia and West Virginia. These facilities have received private letter rulings from the IRS. In January 2004, the IRS concluded its examination of the partnership that owns these facilities for the tax years 1998 through 2001 and the IRS did not disallow any of the previously recognized synthetic fuel credits. During the second quarter of 2004, we received final written notice of the resolution of the examination from the IRS.

In 2003, we purchased 99% ownership in a South Carolina facility that produces synthetic fuel. We did not recognize in our Consolidated Statements of Income the tax benefit of \$35.9 million for credits claimed on our South Carolina facility in 2003 pending receipt of a favorable private letter ruling. In 2004, we received a favorable private letter ruling. We believe receipt of the private letter ruling provides reasonable assurance that it is highly probable that the credits will be sustained. Therefore, we recognized the tax benefit of \$35.9 million in our Consolidated Statements of Income during 2004.

Under Section 29, only synthetic fuel sold before January 1, 2008 can be claimed for synthetic fuel tax credits. Additionally, Section 29 provides for a phase-out of the tax credit to the extent that average annual oil prices per barrel exceed an inflation adjusted oil price as determined annually by the IRS. For 2005, we estimate that the credit reduction would begin if the average annual oil price per barrel exceeds approximately \$52 and would be fully phased out if the average annual oil price exceeds \$65 per barrel.

While we believe the production and sale of synthetic fuel from all of our synthetic fuel facilities meet the conditions to qualify for tax credits under Section 29 of the IRS Code, we cannot predict the timing or outcome of any future challenge by the IRS, legislative or regulatory action, oil prices, or the ultimate impact of such events on the Section 29 credits that we have claimed to date or expect to claim in the future, but the impact could be material to our financial results.

11 Leases

There are two types of leases—operating and capital. Capital leases qualify as sales or purchases of property and are reported in our Consolidated Balance Sheets. Capital leases are not material in amount. All other leases are operating leases and are reported in our Consolidated Statements of Income. We expense all lease payments associated with our regulated business. Lease expense and future minimum payments for long-term, noncancelable, operating leases are not material to BGE's financial results. We present information about our operating leases below.

Outgoing Lease Payments

We, as lessee, lease some facilities and equipment. The lease agreements expire on various dates and have various renewal options. We also enter into certain power purchase agreements which are accounted for as operating leases. Under these agreements, we are required to make fixed capacity payments, as well as variable payments based on actual output of the plants. We exclude from our future minimum lease payments table the variable payments related to the output of the plant due to the contingency associated with these payments.

Lease expense was:

- ◆ \$34.1 million in 2004,
- ◆ \$22.7 million in 2003, and
- ◆ \$19.4 million in 2002.

At December 31, 2004, we owed future minimum payments for long-term, noncancelable, operating leases as follows:

Year	<i>(In millions)</i>
2005	\$113.2
2006	113.2
2007	106.0
2008	61.2
2009	13.4
Thereafter	127.9
Total future minimum lease payments	\$534.9

12 Commitments, Guarantees, and Contingencies

Commitments

We have made substantial commitments in connection with our merchant energy, regulated electric and gas, and other nonregulated businesses. These commitments relate to:

- ◆ purchase of electric generating capacity and energy,
- ◆ procurement and delivery of fuels, and
- ◆ long-term service agreements, capital for construction programs and other.

Our merchant energy business enters into various long-term contracts for the procurement and delivery of fuels to supply our generating plant requirements. In most cases, our contracts contain provisions for price escalations, minimum purchase levels, and other financial commitments. These contracts expire in various years between 2005 and 2012. In addition, our merchant energy business enters into long-term contracts for the capacity and transmission rights for the delivery of energy to meet our physical obligations to our customers. These contracts expire in various years between 2005 and 2018.

Our merchant energy business also has committed to long-term service agreements and other purchase commitments for our plants.

Our regulated electric business enters into various long-term contracts for the procurement of electricity. These contracts expire between 2005 and 2006. The cost of power under these contracts are recoverable under the POLR agreement reached with the Maryland PSC, as discussed in *Note 1* and therefore are excluded from the table on the next page.

Our regulated gas business enters into various long-term contracts for the procurement, transportation, and storage of gas. Our regulated gas business has gas transportation and storage contracts that expire between 2005 and 2023. These contracts are recoverable under BGE's gas cost adjustment clause discussed in *Note 1* and therefore are excluded from the table on the next page.

Our other nonregulated business has committed to gas purchases and to contributions of additional capital for construction programs and joint ventures in which they have an interest.

We have also committed to long-term service agreements and other obligations related to our information technology systems.

At December 31, 2004, we estimate our future obligations to be as follows:

	Payments				Total
	2005	2006-2007	2008-2009	Thereafter	
	(In millions)				
Merchant Energy					
Purchased capacity and energy	\$ 794.2	\$ 743.3	\$ 184.9	\$ 157.0	\$ 1,879.4
Fuel and transportation	1,292.0	816.3	142.8	37.3	2,288.4
Long-term service agreements, capital, and other	59.3	47.2	70.0	208.6	385.1
Total merchant energy	2,145.5	1,606.8	397.7	402.9	4,552.9
Corporate and Other:					
Long-term service agreements, capital, and other	25.4	12.2	3.1	1.9	42.6
Regulated:					
Purchase obligations and other	12.5	3.6	1.8	0.5	18.4
Total future obligations	\$2,183.4	\$1,622.6	\$402.6	\$405.3	\$4,613.9

Long-Term Power Sales Contracts

We enter into long-term power sales contracts in connection with our load-serving activities. We also enter into long-term power sales contracts associated with certain of our power plants. Our load-serving power sales contracts extend for terms through 2012 and provide for the sale of full requirements energy to electricity distribution utilities and certain retail customers. Our power sales contracts associated with our power plants extend for terms into 2014 and provide for the sale of all or a portion of the actual output of certain of our power plants. All long-term contracts were executed at pricing that approximated market rates, including profit margin, at the time of execution.

Guarantees

The terms of our guarantees are as follows:

	Expiration				Total
	2005	2006-2007	2008-2009	Thereafter	
	(In millions)				
Competitive Supply	\$3,693.4	\$918.5	\$314.5	\$ 577.8	\$5,504.2
Other	6.7	3.6	15.7	1,261.0	1,287.0
Total Guarantees	\$3,700.1	\$922.1	\$330.2	\$1,838.8	\$6,791.2

At December 31, 2004, Constellation Energy had a total of \$6,791.2 million guarantees outstanding related to loans, credit facilities, and contractual performance of certain of its subsidiaries as described below. These guarantees do not represent our incremental obligations, and we do not expect to fund the full amount under these guarantees.

- ◆ Constellation Energy guaranteed \$5,504.2 million on behalf of our subsidiaries for competitive supply activities. These guarantees are put into place in order to allow our subsidiaries the flexibility needed to conduct business with counterparties without having to post substantial cash collateral. While the face amount of these guarantees is \$5,504.2 million, our calculated fair value of obligations covered by these guarantees was \$1,395.6 million at December 31, 2004. If the parent company was required to fund subsidiary obligations, the total amount at current market prices is \$1,395.6 million. The recorded fair value of obligations in our Consolidated Balance Sheets for these guarantees was \$781.1 million at December 31, 2004.
- ◆ Constellation Energy guaranteed \$945.6 million primarily on behalf of our nuclear generating facilities primarily related to nuclear insurance and for credit support to ensure these plants have funds to meet expenses and obligations to safely operate and maintain the plants.
- ◆ Constellation Energy guaranteed \$48.2 million on behalf of our other nonregulated businesses primarily for loans and performance bonds of which \$25.0 million was recorded in our Consolidated Balance Sheets at December 31, 2004.
- ◆ Our merchant energy business guaranteed \$18.7 million for loans and other performance guarantees related to certain power projects in which we have an investment.
- ◆ Our other nonregulated business guaranteed \$11.2 million for performance bonds.
- ◆ BGE guaranteed two-thirds of certain debt of Safe Harbor Water Power Corporation, an unconsolidated investment. At December 31, 2004, Safe Harbor Water Power Corporation had outstanding debt of \$20 million. The maximum amount of BGE's guarantee is \$13.3 million.
- ◆ BGE guaranteed the Trust Preferred Securities of \$250.0 million of BGE Trust II, an unconsolidated investment, as discussed in Note 9.

The total fair value of the obligations for our guarantees recorded in our Consolidated Balance Sheets was \$806.1 million and not the \$6.8 billion of total guarantees. We assess the risk of loss from these guarantees to be minimal.

Environmental Matters

Solid and Hazardous Waste

The Environmental Protection Agency (EPA) and several state agencies have notified us that we are considered a potentially responsible party with respect to the clean-up of certain environmentally contaminated sites. We cannot estimate the final clean-up costs for all of these sites, but the costs and current status of each site is described in more detail on the next page.

Metal Bank

In 1997, the EPA, under the Comprehensive Environmental Response, Compensation and Liability Act ("Superfund"), issued a Record of Decision (ROD) for the proposed clean-up at the Metal Bank of America site, a metal reclaimer in Philadelphia. We had previously recorded a liability in our Consolidated Balance Sheets for BGE's 15.47% share of probable clean-up costs. Based on current settlement negotiations among the EPA and the potentially responsible parties involved at the site, we do not believe we will incur clean-up costs in excess of the amount recorded as a liability. The EPA and the potentially responsible parties, including BGE, are currently pursuing claims against Metal Bank of America for an equitable share of expected site remediation costs.

68th Street Dump

In 1999, the EPA proposed to add the 68th Street Dump in Baltimore, Maryland to the Superfund National Priorities List ("NPL"), which is its list of sites targeted for clean-up and enforcement, and sent a general notice letter to BGE and 19 other parties identifying them as potentially liable parties at the site. In March 2004, we and other potentially responsible parties formed the 68th Street Coalition, which has entered into consent order negotiations with the EPA to investigate clean-up options for the site under the Superfund Alternative Sites Program. While negotiations under this program are ongoing, the 68th Street Dump will not be placed on the NPL. At this stage, it is not possible to predict the outcome of those discussions or our share of the liability. However, the costs could have a material effect on our financial results.

Kane and Lombard

The EPA issued its ROD for the Kane and Lombard Drum site located in Baltimore, Maryland on September 30, 2003. The ROD specifies the clean-up plan for the site, consisting of enhanced reductive dechlorination, a soil management plan, and institutional controls. In July 2004, the EPA issued a Special Notice/Demand Letter to BGE and three other potentially responsible parties regarding implementation of the remedy. In response, the potentially responsible parties have proposed negotiations with the EPA regarding the implementation. The total clean-up costs are estimated to be approximately \$10 million. We estimate our current share of site-related costs to be 11.1%. In December 2002, we recorded a liability in our Consolidated Balance Sheets for our share of the clean-up costs that we believe is probable. Our final share of the \$10 million has not been determined and it may vary from the current estimate.

Spring Gardens

In December 1996, BGE signed a consent order with the Maryland Department of the Environment that requires it to implement remedial action plans for contamination at and around the Spring Gardens site, located in Baltimore, Maryland. The Spring Gardens site was once used to manufacture gas from coal and oil. Based on the remedial action plans, BGE estimates its probable clean-up costs will total \$47 million. BGE has recorded these costs as a liability in its Consolidated Balance Sheets and has deferred these costs, net of accumulated amortization and amounts it recovered from insurance companies, as a regulatory asset. Based on the results of studies at this site, it is reasonably possible that additional costs could exceed the amount BGE has recognized by approximately \$14 million. Through December 31, 2004, BGE has spent approximately \$40 million for remediation at this site.

BGE also has investigated other small sites where gas was manufactured in the past. We do not expect the clean-up costs of the remaining smaller sites to have a material effect on our financial results.

Litigation

In the normal course of business, we are involved in various legal proceedings. We discuss the significant matters below.

Western Power Markets

Baldwin Associates, Inc. v. Gray Davis, Governor of California and 22 other defendants (including Constellation Power Development, Inc., a subsidiary of Constellation Power, Inc.)—This putative class action lawsuit was filed on October 5, 2001 in the Superior Court, County of San Francisco. The action requested damages, recession and reformation of approximately 38 long-term power purchase contracts, and an injunction against improper spending by the state of California.

Constellation Power Development, Inc. was named as a defendant but was never served with process in this case. On December 6, 2004, the Court ordered dismissal of this action since the plaintiff had failed to serve the defendants.

James M. Millar v. Allegheny Energy Supply, Constellation Power Source, Inc., High Desert Power Project, LLC, et al.—On December 19, 2003, plaintiffs filed an amended complaint in Superior Court of California, County of San Francisco, naming for the first time, Constellation Power Source, Inc., renamed Constellation Energy Commodities Group, Inc. (CCG), and High Desert Power Project, LLC (High Desert), two of our subsidiaries, as additional defendants. The complaint is a putative class action on behalf of California electricity consumers and alleges that the defendant power suppliers, including CCG and High Desert, violated California's Unfair Competition Law in connection with certain long-term power contracts that the defendants negotiated with the California Department of Water Resources in 2001 and 2002. Notwithstanding the amended long-term power contracts and the releases and settlement agreements negotiated at the time of such amendments, the plaintiff seeks to have the Court certify the case as a class action and to order the repayment of any monies that were acquired by the defendants under the long-term contracts or the amended long-term contracts by means of unfair competition in violation of California law. We believe that we have meritorious defenses to this action and intend to defend against it vigorously. However, we cannot predict the timing, or outcome, of this case, or its possible effect on our financial results.

City of Tacoma v. AEP, et al.—The City of Tacoma, on June 7, 2004, in the U.S. District Court, Western District of Washington, filed a complaint against over 60 companies, including CCG. The complaint alleges that the defendants engaged in manipulation of electricity markets resulting in prices for power in the western power markets that were substantially above what market prices would have been in the absence of the alleged unlawful contracts, combinations and conspiracy in violation of Section 1 of the Sherman Act. The complaint further alleges that the total amount of damages is unknown, but is estimated to exceed \$175 million. On February 11, 2005, the Court granted the defendants' motion to dismiss the action based on the Court's lack of jurisdiction over the claims in question. The plaintiff may seek to appeal the Court's dismissal of the action. We believe that we have meritorious defenses to this action and intend to defend against it vigorously. However, we cannot predict the timing, or outcome, of this case, or its possible effect on our financial results.

Mercury

Beginning in September 2002, BGE, Constellation Energy, and several other defendants have been involved in numerous actions filed in the Circuit Court for Baltimore City, Maryland alleging mercury poisoning from several sources, including coal plants formerly owned by BGE. The plants are now owned by a subsidiary of Constellation Energy. In addition to BGE and Constellation Energy, approximately 11 other defendants, consisting of pharmaceutical companies, manufacturers of vaccines, and manufacturers of Thimerosal have been sued. Approximately 70 cases have been filed to date, with each case seeking \$90 million in damages from the group of defendants.

In a ruling applicable to all but several of the cases, the Circuit Court for Baltimore City dismissed with prejudice all claims against BGE and Constellation Energy and entered a stay of the proceedings as they relate to other defendants. Plaintiffs may attempt to pursue appeals of the rulings in favor of BGE and Constellation Energy once the cases are finally concluded as to all defendants. We believe that we have meritorious defenses and intend to defend the actions vigorously. However, we cannot predict the timing or outcome of these cases, or their possible effect on our, or BGE's, financial results.

Employment Discrimination

Miller, et. al v. Baltimore Gas and Electric Company, et al.—This action was filed on September 20, 2000 in the U.S. District Court for the District of Maryland. Besides BGE, Constellation Energy Group, Constellation Nuclear, and Calvert Cliffs Nuclear Power Plant are also named defendants. The action seeks class certification for approximately 150 past and present employees and alleges racial discrimination at Calvert Cliffs Nuclear Power Plant. The amount of damages is unspecified, however the plaintiffs seek back and front pay, along with compensatory and punitive damages. The Court scheduled a briefing process for the motion to certify the case as a class action suit. The briefing process concluded, oral argument on the class certification motion was held on April 16, 2004, and the parties are awaiting the court's decision. We do not believe class certification is appropriate and we further believe that we have meritorious defenses to the underlying claims and intend to defend the action vigorously. However, we cannot predict the timing, or outcome, of the action or its possible effect on our, or BGE's, financial results.

Asbestos

Since 1993, BGE has been involved in several actions concerning asbestos. The actions are based upon the theory of "premises liability," alleging that BGE knew of and exposed individuals to an asbestos hazard. The actions relate to two types of claims.

The first type is direct claims by individuals exposed to asbestos. BGE is involved in these claims with approximately 70 other defendants. Approximately 490 individuals that were never employees of BGE each claim \$6 million in damages (\$2 million compensatory and \$4 million punitive). These claims are currently pending in state courts in Maryland and Pennsylvania. BGE does not know the specific facts necessary to estimate its potential liability for these claims. The specific facts BGE does not know include:

- ◆ the identity of BGE's facilities at which the plaintiffs allegedly worked as contractors,
- ◆ the names of the plaintiff's employers,
- ◆ the date on which the exposure allegedly occurred, and
- ◆ the facts and circumstances relating to the alleged exposure.

To date, 351 asbestos cases were dismissed or resolved for amounts that were not significant. Approximately 20 cases are scheduled for trial through the end of 2006.

The second type is claims by one manufacturer—Pittsburgh Corning Corp. (PCC)—against BGE and approximately eight others, as third-party defendants. On April 17, 2000, PCC declared bankruptcy.

These claims relate to approximately 1,500 individual plaintiffs and were filed in the Circuit Court for Baltimore City, Maryland in the fall of 1993. To date, about 375 cases have been resolved, all without any payment by BGE. BGE does not know the specific facts necessary to estimate its potential liability for these claims. The specific facts we do not know include:

- ◆ the identity of BGE facilities containing asbestos manufactured by the manufacturer,
- ◆ the relationship (if any) of each of the individual plaintiffs to BGE,
- ◆ the settlement amounts for any individual plaintiffs who are shown to have had a relationship to BGE,
- ◆ the dates on which/places at which the exposure allegedly occurred, and
- ◆ the facts and circumstances relating to the alleged exposure.

Until the relevant facts for both types of claims are determined, we are unable to estimate what our, or BGE's, liability might be. Although insurance and hold harmless agreements from contractors who employed the plaintiffs may cover a portion of any awards in the actions, the potential effect on our, or BGE's, financial results could be material.

Storage of Spent Nuclear Fuel

The Nuclear Waste Policy Act of 1982 (NWPA) required the federal government through the Department of Energy (DOE), to develop a repository for, and disposal of, spent nuclear fuel and high-level radioactive waste. The NWPA and our contracts with the DOE required the DOE to begin taking possession of spent nuclear fuel generated by nuclear generating units no later than January 31, 1998. The DOE has stated that it will not meet that obligation until 2010 at the earliest. This delay has required that we undertake additional actions related to on-site fuel storage at Calvert Cliffs and Nine Mile Point, including the installation of on-site dry fuel storage capacity at Calvert Cliffs. In January 2004, we filed a complaint against the federal government in the United States Court of Federal Claims seeking to recover damages caused by the DOE's failure to meet its contractual obligation to begin disposing of spent nuclear fuel by January 31, 1998. The cases are currently stayed, pending litigation in other related cases.

In connection with our purchase of Ginna, all of Rochester Gas & Electric Corporation's (RG&E) rights and obligations related to recovery of damages from the DOE were assigned to us. However, we have an obligation to reimburse RG&E for up to the first \$10 million in recovered damages. We and RG&E are currently requesting to allow us to replace RG&E as the party in interest in the complaint filed against the federal government by RG&E.

Nuclear Insurance

We maintain nuclear insurance coverage for Calvert Cliffs, Nine Mile Point, and Ginna in four program areas: liability, worker radiation, property, and accidental outage. These policies contain certain industry standard exclusions, including, but not limited to, ordinary wear and tear, and war.

In November 2002, the President signed into law the Terrorism Risk Insurance Act ("TRIA") of 2002. Under the TRIA, property and casualty insurance companies are required to offer insurance for losses resulting from Certified acts of terrorism. Certified acts of terrorism are determined by the Secretary of State and Attorney General and primarily are based upon the occurrence of significant acts of international terrorism. Our nuclear property and accidental outage insurance programs, as discussed later in this section, provide coverage for Certified acts of terrorism.

If there were an accident or an extended outage at any unit of Calvert Cliffs, Nine Mile Point or Ginna, it could have a substantial adverse impact on our financial results.

Nuclear Liability Insurance

Pursuant to the Price-Anderson Act, we are required to insure against public liability claims resulting from nuclear incidents to the full limit of public liability. This limit of liability consists of the maximum available commercial insurance of \$300 million and mandatory participation in an industry-wide retrospective premium assessment program. The retrospective premium assessment is \$100.6 million per reactor, increasing the total amount of insurance for public liability to approximately \$10.8 billion. Under the retrospective assessment program, we can be assessed up to \$503 million per incident at any commercial reactor in the country, payable at no more than \$50 million per incident per year. This assessment also applies in excess of our worker radiation claims insurance and is subject to inflation and state premium taxes. Claims resulting from non-certified acts of terrorism are limited to the commercial insurance discussed above, regardless of the number of nuclear plants affected. In addition, the U.S. Congress could impose additional revenue-raising measures to pay claims.

Worker Radiation Claims Insurance

We participate in the American Nuclear Insurers Master Worker Program that provides coverage for worker tort claims filed for radiation injuries. Effective January 1, 1998, this program was modified to provide coverage to all workers whose nuclear-related employment began on or after the commencement date of reactor operations. Waiving the right to make additional claims under the old policy was a condition for coverage under the new policy. We describe the old and new policies below:

- ◆ Nuclear worker claims reported on or after January 1, 1998 are covered by a new insurance policy with a single industry aggregate limit of \$300 million for radiation injury claims against all those insured by this policy.

- ◆ All nuclear worker claims reported prior to January 1, 1998 are still covered by the old policy. Insureds under the old policies, with no current operations, are not required to purchase the new policy described on the previous page, and may still make claims against the old policies through 2007. If radiation injury claims under these old policies exceed the policy reserves, all policyholders could be retroactively assessed, with our share being up to \$6.3 million.

The sellers of Nine Mile Point retain the liabilities for existing and potential claims that occurred prior to November 7, 2001. In addition, the Long Island Power Authority, which continues to own 18% of Unit 2 at Nine Mile Point, is obligated to assume its pro rata share of any liabilities for retrospective premiums and other premiums assessments. RG&E, the seller of Ginna, retains the liabilities for existing and potential claims that occurred prior to June 10, 2004. If claims under these policies exceed the coverage limits, the provisions of the Price-Anderson Act would apply.

Nuclear Property Insurance

Our policies provide \$500 million in primary coverage at Calvert Cliffs, Nine Mile Point, and Ginna. In addition, we maintain \$2.25 billion in excess coverage at Calvert Cliffs and Nine Mile Point and \$1.77 billion of excess coverage at Ginna for property damage, decontamination, and premature decommissioning liability. This coverage currently is purchased through an industry mutual insurance company. If accidents at plants insured by the mutual insurance company cause a shortfall of funds, all policyholders could be assessed, with our share being up to \$91.7 million.

Losses resulting from non-certified acts of terrorism are covered as a common occurrence, meaning that if non-certified terrorist acts occur against one or more commercial nuclear power plants insured by our nuclear property insurance company within a 12-month period, they would be treated as one event and the owners of the plants would share one full limit of liability (currently \$3.24 billion).

Accidental Nuclear Outage Insurance

Our policies provide indemnification on a weekly basis for losses resulting from an accidental outage of a nuclear unit. Coverage begins after a 12-week deductible period and continues at 100% of the weekly indemnity limit for 52 weeks and then 80% of the weekly indemnity limit for the next 110 weeks. Our coverage is up to \$490.0 million per unit at Calvert Cliffs and Ginna, \$420.0 million for Unit 1 of Nine Mile Point, and \$401.8 million for Unit 2 of Nine Mile Point. This amount can be reduced by up to \$98.0 million per unit at Calvert Cliffs and \$84.0 million for Nine Mile Point if an outage of more than one unit is caused by a single insured physical damage loss.

Non-Nuclear Property Insurance

Our conventional property insurance provides coverage of \$1.0 billion per occurrence for Certified acts of terrorism as defined under the Terrorism Risk Insurance Act of 2002. Certified acts of terrorism are determined by the Secretary of State and Attorney General of the United States and primarily are based upon the occurrence of significant acts of international terrorism. Our conventional property insurance program also provides coverage for non-certified acts of terrorism up to an annual aggregate limit of \$333.0 million. If a terrorist act occurs at any of our facilities, it could have a significant adverse impact on our financial results.

California Power Purchase Agreements

Our merchant energy business has \$240.2 million invested in operating power projects of which our ownership percentage represents approximately 140 megawatts of electricity that are sold to Pacific Gas & Electric (PGE) and to Southern California Edison (SCE) in California under power purchase agreements.

As a result of two proceedings initiated by certain California utilities and others before the California Public Utility Commission challenging prices under power purchase agreements for periods between June 2000 and March 2001, the potential exists that certain California power generation projects in which we have an ownership interest could be required to pay refunds. We believe the price for energy payments were appropriate and any refund would be unwarranted. Our current estimate of potential exposure that could result from an adverse ruling in the proceeding is between \$2.5 million and \$5.0 million. However, we cannot determine the actual amount we could be required to pay because litigation is ongoing and new events could occur that may cause the actual amount, if any, to be materially different from our estimate.

13 Hedging Activities and Fair Value of Financial Instruments

SFAS No. 133 Hedging Activities

We are exposed to market risk, including changes in interest rates and the impact of market fluctuations in the price and transportation costs of electricity, natural gas, and other commodities.

Interest Rates

We use interest rate swaps to manage our interest rate exposures associated with new debt issuances and to optimize the mix of fixed and floating-rate debt. The swaps used to manage our exposure prior to the issuance of new debt are designated as cash-flow hedges under SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities, as amended*, with the effective portion of gains and losses, net of associated deferred income tax effects, recorded in "Accumulated other comprehensive income" in our Consolidated Statements of Common Shareholders' Equity and Comprehensive Income and Consolidated Statements of Capitalization, in anticipation of planned financing transactions. We reclassify gains and losses on the hedges from "Accumulated other comprehensive income" into "Interest expense" in our Consolidated Statements of Income during the periods in which the interest payments being hedged occur.

The swaps used to optimize the mix of fixed and floating-rate debt are designated as fair value hedges under SFAS No. 133. We record any gains or losses on swaps that qualify for fair value hedge accounting treatment, as well as changes in the fair value of the debt being hedged, in "Interest expense," and we record any changes in fair value of the swaps and the debt in "Risk management assets and liabilities" and "Long-term debt" in our Consolidated Balance Sheets. In addition, we record the difference between interest on hedged fixed-rate debt and floating-rate swaps in "Interest expense" in the periods that the swaps settle.

At December 31, 2004 and 2003, we had net unrealized pre-tax gains on interest rate cash-flow hedges recorded in "Accumulated other comprehensive income" of \$18.3 million and \$21.2 million, respectively. We expect to reclassify \$2.9 million of pre-tax net gains on these cash-flow hedges from "Accumulated other comprehensive income" into "Interest expense" during the next twelve months. We had no hedge ineffectiveness on these swaps.

During 2004, to optimize the mix of fixed and floating-rate debt, we entered into interest rate swaps qualifying as fair value hedges relating to \$450 million of our fixed-rate debt maturing in 2012 and 2015, and converted this notional amount of debt to floating-rate. At December 31, 2004, the \$13.3 million increase in the fair value of these hedges, for which there was no hedge ineffectiveness, was recorded as an increase in our "Risk management assets" and "Long-term debt."

Commodity Prices

Our merchant energy business uses a variety of derivative and non-derivative instruments to manage the commodity price risk of our competitive supply activities and our electric generation facilities, including power sales, fuel and energy purchases, gas purchased for resale, emission credits, weather risk, and the market risk of outages. In order to manage these risks, we may enter into fixed-price derivative or non-derivative contracts to hedge the variability in future cash flows from forecasted sales of energy and purchases of fuel and energy. The objectives for entering into such hedges include:

- ◆ fixing the price for a portion of anticipated future electricity sales at a level that provides an acceptable return on our electric generation operations,
- ◆ fixing the price of a portion of anticipated fuel purchases for the operation of our power plants,
- ◆ fixing the price for a portion of anticipated energy purchases to supply our load-serving customers, and
- ◆ fixing the price for a portion of anticipated sales of natural gas to customers.

The portion of forecasted transactions hedged may vary based upon management's assessment of market, weather, operational, and other factors.

At December 31, 2004, our merchant energy business had designated certain fixed-price forward contracts as cash-flow hedges of forecasted sales of energy and forecasted purchases of fuel and energy for the years 2005 through 2011 under SFAS No. 133. Our merchant energy business had net unrealized pre-tax losses on these cash-flow hedges recorded in "Accumulated other comprehensive income" of \$103.8 million at December 31, 2004 and net unrealized pre-tax gains of \$16.1 million at December 31, 2003. We expect to reclassify \$154.5 million of net pre-tax gains on cash-flow hedges from "Accumulated other comprehensive income" into earnings during the next twelve months based on the market prices at December 31, 2004. However, the actual amount reclassified into earnings could vary from the amounts recorded at December 31, 2004, due to future changes in market prices. Additionally, for cash-flow hedges settled by physical delivery of the underlying commodity, "Reclassification of net gains on hedging instruments from OCI to net income" represents the fair value of those derivatives, which is realized through gross settlement at the contract price. In 2004, we recognized \$3.0 million of pre-tax losses in earnings related to cash-flow hedge ineffectiveness.

Our merchant energy business also enters into natural gas storage contracts that qualify for fair value hedge accounting treatment under SFAS No. 133. During 2004, we had unrealized pre-tax gains of \$2.2 million and unrealized pre-tax losses of \$0.4 million due to hedge ineffectiveness, and the resulting pre-tax net gain of \$1.8 million was recognized into earnings during 2004. We record changes in fair value of these hedges as a component of "Fuel and purchased energy expenses" in our Consolidated Statements of Income.

Regulated Gas Business

BGE uses basis swaps in the winter months (November through March) to hedge its price risk associated with natural gas purchases under its market-based rates incentive mechanism and under its off-system gas sales program. BGE also uses fixed-to-floating and floating-to-fixed swaps to hedge its price risk associated with its off-system gas sales. The fixed portion represents a specific dollar amount that BGE will pay or receive, and the floating portion represents a fluctuating amount based on a published index that BGE will receive or pay. BGE's regulated gas business internal guidelines do not permit the use of swap agreements for any purpose other than to hedge price risk.

Fair Value of Financial Instruments

The fair value of a financial instrument represents the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced sale or liquidation. Significant differences can occur between the fair value and carrying amount of financial instruments that are recorded at historical amounts. We use the following methods and assumptions for estimating fair value disclosures for financial instruments:

- ◆ cash and cash equivalents, net accounts receivable, other current assets, certain current liabilities, short-term borrowings, current portion of long-term debt, and certain deferred credits and other liabilities: because of their short-term nature, the amounts reported in our Consolidated Balance Sheets approximate fair value,

- ◆ investments and other assets: the fair value is based on quoted market prices where available, and
- ◆ long-term debt: the fair value is based on quoted market prices where available or by discounting remaining cash flows at current market rates.

We show the carrying amounts and fair values of financial instruments included in our Consolidated Balance Sheets in the following table.

At December 31,	2004		2003	
	Carrying Amount	Fair Value	Carrying Amount	Fair Value
	<i>(In millions)</i>			
Investments and other assets—				
Constellation Energy	\$1,190.0	\$1,191.2	\$ 898.7	\$ 902.2
Fixed-rate long-term debt:				
Constellation Energy	4,468.5	4,979.7	5,069.4	5,723.5
BGE	1,404.3	1,468.2	1,549.3	1,787.4
Variable-rate long-term debt:				
Constellation Energy	835.6	835.6	323.2	323.2
BGE	99.3	99.3	104.1	104.1

Certain prior-year amounts have been reclassified to conform with the current year's presentation.

14 Stock-Based Compensation

Under our long-term incentive plans, we granted stock options, performance and service-based restricted stock, performance-based units, and equity to officers, key employees, and members of the Board of Directors. Under the plans, we can grant up to a total of 18,000,000 shares. At December 31, 2004, we had stock options, restricted stock, and stock unit grants outstanding as discussed below. BGE officers and key employees participate in our stock-based compensation plans. The expense recognized by BGE in 2004, 2003, and 2002 was not material to BGE's financial results.

Non-Qualified Stock Options

Options are granted with an exercise price not less than the market value of the common stock at the date of grant, become vested over a period up to five years, and expire ten years from the date of grant. In accordance with APB No. 25, no compensation expense is recognized for these awards.

In February 2002, our Compensation Committee of the Board of Directors granted options, contingent on shareholder approval of our long-term incentive plan, with an exercise price equal to the fair market value of our stock on the date of grant of \$27.93. Our shareholders approved the plan at the annual meeting in May 2002 when the stock price had increased to \$31.21. The difference between the exercise price and the fair market value in May when the shareholder approval contingency was satisfied was \$6.3 million and is being amortized to compensation expense over a period up to five years. We recorded compensation expense of \$1.0 million in 2004, \$1.8 million in 2003, and \$3.0 million in 2002 related to this grant.

All other stock option grants have an exercise price equal to or greater than market value on the date of grant and were not subject to any future contingencies, therefore no compensation expense has been recognized. We reverse any expense associated with stock options that are canceled or forfeited prior to the vesting of the grants. Summarized information for our stock option grants is as follows:

	2004		2003		2002	
	Shares	Weighted-Average Exercise Price	Shares	Weighted-Average Exercise Price	Shares	Weighted-Average Exercise Price
	<i>(In thousands, except for exercise prices)</i>					
Outstanding, beginning of year	7,117	\$29.53	6,081	\$29.65	2,646	\$30.73
Granted with exercise prices:						
At fair market value	1,640	39.60	1,485	29.24	1,708	30.62
Less than fair market value on the date contingency was satisfied (1)	—	—	—	—	1,935	27.93
Greater than fair market value	—	—	9	28.53	103	31.21
Total granted	1,640	39.60	1,494	29.24	3,746	29.25
Exercised	(834)	28.49	(267)	27.92	—	—
Canceled/Expired	(558)	33.09	(191)	33.28	(311)	34.01
Outstanding, end of year	7,365	\$31.62	7,117	\$29.53	6,081	\$29.65
Exercisable, end of year	3,844	\$29.99	3,169	\$29.89	1,413	\$30.78
Weighted-average fair value per share of options granted with exercise prices:						
At fair market value		\$ 7.22		\$ 6.80		\$ 7.79
Less than fair market value on the date contingency was satisfied (1)		—		—		9.15
Greater than fair market value		—		5.56		5.89

(1) Shares were granted in February 2002 with an exercise price equal to the fair market value of the stock on the grant date, and the grant was subject to shareholder approval of our long-term incentive plan. At the date of shareholder approval, the fair market value of the stock was higher than the grant date fair market value. Therefore, the difference is being amortized to compensation expense.

The following table summarizes information about stock options outstanding at December 31, 2004 (stock options in thousands):

Range of Exercise Prices	Stock Options Outstanding	Weighted-Average Remaining Contractual Life	Stock Options Exercisable
\$21.47 - \$25.00	33	7.8 years	18
\$25.00 - \$30.00	3,678	7.5 years	2,053
\$30.00 - \$35.00	2,167	6.3 years	1,768
\$35.00 - \$40.72	1,487	9.2 years	5

Restricted Stock Awards

In addition, we issue common stock based on meeting certain performance and/or service goals. This stock vests to participants at various times ranging from one to five years if the performance and/or service goals are met. In accordance with APB No. 25, we recognize compensation expense for our performance-based awards using the variable accounting method, whereby we amortize the value of the market price of the underlying stock on the date of grant (adjusted for subsequent changes in fair market value through the performance measurement date) to compensation expense over the service period. We account for our service-based awards using the fixed accounting method, whereby we amortize the value of the market price of the underlying stock on the date of grant to compensation expense over the service period. We reverse any expense associated with restricted stock that is canceled or forfeited during the performance or service period.

We recorded compensation expense related to our restricted stock awards of \$17.0 million in 2004, \$16.4 million in 2003, and \$6.6 million in 2002. Summarized share information for our restricted stock awards is as follows:

	2004	2003	2002
	<i>(In thousands)</i>		
Outstanding, beginning of year	752	314	435
Granted	1,002	555	344
Released to participants	(467)	(109)	(170)
Canceled	(64)	(8)	(295)
Outstanding, end of year	1,223	752	314
Weighted-average fair value restricted stock granted	\$38.83	\$30.53	\$27.23

Performance-Based Units

During 2004, we granted 11.6 million of performance-based units to officers and key employees of which 1.1 million units were forfeited prior to year end. Each unit is equivalent to \$1 in value and vests at the end of a three-year service and performance period. The level of payout is based on the achievement of certain performance goals at the end of the three-year period and at least 50% of any payouts will be settled in cash, and the other 50% may be settled in either stock or cash at our discretion. We recorded compensation expense of \$2.9 million in 2004 related to these performance-based units.

Equity-Based Grants

We recorded compensation expense of \$0.5 million in 2004, \$0.4 million in 2003, and \$0.5 million in 2002 related to equity-based grants to members of the Board of Directors.

Pro-forma Information

Disclosure of pro-forma information regarding net income and earnings per share is required under SFAS No. 123, which uses the fair value method. The fair value of our stock-based awards were estimated as of the date of grant using the Black-Scholes option pricing model based on the following weighted-average assumptions:

	2004	2003	2002
Risk-free interest rate	3.15%	2.92%	4.45%
Expected life (in years)	5.0	5.0	5.0
Expected market price volatility factor	23.7%	32.0%	31.9%
Expected dividend yield	3.0%	3.3%	3.3%

We disclose the pro-forma effect on net income and earnings per share in accordance with SFAS No. 148, *Accounting for Stock-Based Compensation—Transition and Disclosure*, in *Note 1*. Also, as discussed in more detail in *Note 1*, the FASB issued SFAS No. 123R in December 2004, which changed the accounting for stock-based compensation, requiring companies to expense stock options and other equity awards based on their grant-date fair values.

15 Acquisitions

Acquisition of Ginna

On June 10, 2004, we completed our purchase of the Ginna nuclear facility, which is located in Ontario, New York from RG&E. Ginna consists of a 495 megawatt reactor that entered service in 1970 and is licensed to operate until 2029.

We purchased 100 percent of Ginna for \$457.3 million including direct costs associated with the acquisition, of which \$430.0 million was paid in cash at closing and the remaining \$27.3 million was paid during the second half of 2004. RG&E also transferred to us \$200.8 million in decommissioning funds.

We will sell 90 percent of Ginna's output back to RG&E at an average price of nearly \$44 per megawatt-hour until June 2014 under a unit contingent power purchase agreement (if the output is not available because the plant is not operating, there is no requirement to provide output from other sources). The acquisition of Ginna was immediately accretive to earnings.

We accounted for this transaction as an asset acquisition and included Ginna in our merchant energy business segment. Our purchase price allocation for the net assets acquired is as follows:

At June 10, 2004

	(In millions)
Current Assets	\$ 27.9
Nuclear Decommissioning Trust Fund	200.8
Nuclear Fuel	14.5
Net Property, Plant and Equipment	382.8
Intangible Assets (details below)	38.8
Other Assets	124.0
Total Assets Acquired	788.8
Current Liabilities	(20.8)
Asset Retirement Obligations	(177.3)
Deferred Credits and Other Liabilities	(133.4)
Net Assets Acquired	\$457.3

The intangible assets acquired consist of the following:

Description	Amount	Weighted-Average Useful Life
	(In millions)	(In years)
Operating procedures and manuals	\$26.1	25
Permits and licenses	8.5	25
Software	4.2	5
Total intangible assets	\$38.8	

Acquisition of Blackhawk Energy Services and Kaztex Energy Management

On October 22, 2003, we completed our purchase of Blackhawk Energy Services (Blackhawk) and Kaztex Energy Management (Kaztex). We include Blackhawk and Kaztex, part of our retail gas operation, in our merchant energy business segment and have included their results in our consolidated financial statements since the date of acquisition. Blackhawk and Kaztex are providers of natural gas and electricity services. At the time of the acquisition, Blackhawk and Kaztex served approximately 1,100 customers representing approximately 70 billion cubic feet of natural gas and 0.9 million megawatt hours of electricity throughout Illinois and Wisconsin. We acquired 100% ownership of both companies for \$26.9 million cash. We acquired cash of \$1.2 million as part of the purchase.

Our purchase price allocation for the net assets acquired is as follows:

At October 22, 2003

	<i>(In millions)</i>
Cash	\$ 1.2
Other Current Assets	41.0
Total Current Assets	42.2
Net Property, Plant and Equipment	0.1
Goodwill	25.9
Other Assets	0.9
Total Assets Acquired	69.1
Current Liabilities	(40.8)
Deferred Credits and Other Liabilities	(1.4)
Net Assets Acquired	\$26.9

We recorded the existing contracts at fair value as part of the purchase price allocation. The fair value of the contracts was a net liability of \$0.4 million. We recorded the fair value of these contracts as follows:

Net fair value of acquired contracts

	<i>(In millions)</i>
Current Assets	\$ 3.2
Noncurrent Assets	0.1
Total Assets	3.3
Current Liabilities	(2.3)
Noncurrent Liabilities	(1.4)
Total Liabilities	(3.7)
Net fair value of acquired contracts	\$(0.4)

Acquired contracts include both executory contracts and risk management liabilities associated with certain hedges. We are amortizing the acquired executory contracts over a period extending through 2008. The weighted-average amortization period is approximately 20 months and represents the expected contract duration. The risk management liabilities are accounted for as described in *Note 1*.

On an unaudited pro-forma basis, had the acquisition of Blackhawk and Kaztex occurred on the first day of each of the periods presented below, our nonregulated revenues and total revenues would have been as follows:

Year Ended December 31,	2003	2002
	<i>(In millions)</i>	
Nonregulated revenues		
As reported	7,053.6	2,182.5
Pro-forma	7,408.5	2,410.0
Total revenues		
As reported	9,687.8	4,718.6
Pro-forma	10,042.7	4,946.1

We believe that the pro-forma impact on "Income before cumulative effect of change in accounting principle," "Net income," and "Earnings per common share" would not have been material had the acquisition of Blackhawk and Kaztex occurred on the first day of each of the years presented.

Acquisition of the High Desert Power Project

In April 2003, our High Desert Power Project in Victorville, California, an 830 megawatt (MW) gas-fired combined cycle facility, commenced operations. The project has a long-term power sales agreement with the California Department of Water Resources (CDWR). The contract is a "tolling" structure, under which the CDWR pays a fixed amount of \$12.1 million per month and provides CDWR the right, but not the obligation, to purchase power from the project at a price linked to the variable cost of production. During the term of the contract, which runs for seven years and nine months from the April 2003 commercial operation date of the plant, the project will provide energy exclusively to the CDWR.

Prior to June 2003, we accounted for this project as an operating lease. In June 2003, we elected to refinance the lease to extend the tenor of the financing at attractive interest rates. Accordingly, we exercised our option under the lease associated with the High Desert Power Project, paid off the lease, and acquired the assets from the lessor. Beginning June 30, 2003, the assets and liabilities associated with the High Desert Power Project were included in our Consolidated Balance Sheets. We accounted for this transaction as an asset acquisition and included the High Desert Power Project in our merchant energy segment.

Our purchase price allocation for the net assets acquired is as follows:

At June 27, 2003

	<i>(In millions)</i>
Cash	\$ 4.3
Other Current Assets	1.6
Other Noncurrent Assets	1.7
Net Property Plant and Equipment	528.3
Total Assets Acquired	535.9
Accounts Payable	(17.5)
Net Assets Acquired	\$518.4

Acquisition of Alliance

On December 31, 2002, we purchased Alliance Energy Services, LLC and Fellow-McCord Associates, Inc. (collectively, Alliance) from Allegheny Energy, Inc. We include Alliance (renamed Constellation NewEnergy Gas in 2004), our retail gas operation, in our merchant energy business segment and have included their results in our consolidated financial statements since the date of acquisition. These businesses provide gas supply and transportation services and energy consulting services to commercial and industrial customers primarily in the Midwest region, but also in other competitive energy markets including the Northeast, Mid-Atlantic, Texas and California regions.

On an unaudited pro-forma basis, had the acquisition of our retail gas operation occurred on the first day of 2002, our nonregulated revenues and total revenues would have been as follows:

<i>Year Ended December 31,</i>	
	<i>(In millions)</i>
<i>Nonregulated revenues</i>	
As reported	\$2,182.5
Pro-forma	2,722.2
<i>Total revenues</i>	
As reported	\$4,718.6
Pro-forma	5,258.3

We believe that the pro-forma impact on "Income before cumulative effect of change in accounting principle," "Net income," and "Earnings per common share" would not have been material had the acquisition of our retail gas operation occurred on the first day of each of the years presented.

Acquisition of NewEnergy

On September 9, 2002, we purchased AES NewEnergy, Inc. from AES Corporation. Subsequent to the acquisition, we renamed AES NewEnergy, Inc. as Constellation NewEnergy, Inc. (NewEnergy). We include NewEnergy, our retail electric operation, in our merchant energy business segment and have included their results in our consolidated financial statements since the date of acquisition. NewEnergy is a leading national provider of electricity, natural gas, and energy services, serving approximately 4,300 megawatts of load at acquisition associated with commercial and industrial customers in competitive energy markets including the Northeast, Mid-Atlantic, Midwest, Texas and California.

On an unaudited pro-forma basis, had the acquisition of NewEnergy occurred on the first day of 2002, our nonregulated revenues and total revenues would have been as follows:

<i>Year Ended December 31,</i>	
	<i>(In millions)</i>
<i>Nonregulated revenues</i>	
As reported	\$2,182.5
Pro-forma	3,323.3
<i>Total revenues</i>	
As reported	\$4,718.6
Pro-forma	5,859.4

We believe that the pro-forma impact on "Income before cumulative effect of change in accounting principle," "Net income," and "Earnings per common share" would not have been material had the acquisition of NewEnergy occurred on the first day of each of the years presented.

16

Related Party Transactions—BGE

Income Statement

BGE provides standard offer service to those customers that do not choose an alternate supplier. Our wholesale marketing and risk management operation provided BGE with the energy and capacity required to meet its commercial and industrial standard offer service obligations through June 30, 2004 and provides the energy and capacity required to meet its residential standard offer service obligations through June 30, 2006. Effective July 1, 2004, BGE executed one and two-year contracts for commercial and industrial electric power supply totaling approximately 2,300 megawatts. Our wholesale marketing and risk management operation is supplying a significant portion of this electric power supply.

The cost of BGE's purchased energy from nonregulated affiliates of Constellation Energy to meet its standard offer service obligation was as follows:

<i>Year Ended December 31,</i>	2004	2003	2002
	<i>(In millions)</i>		
Electricity purchased for resale expenses	\$ 948.9	\$1,023.4	\$1,080.5

In addition, Constellation Energy charges BGE for the costs of certain corporate functions. Certain costs are directly assigned to BGE. We allocate other corporate function costs based on a total percentage of expected use by BGE. We believe this method of allocation is reasonable and approximates the cost BGE would have incurred as an unaffiliated entity. These costs were:

- ◆ \$99.8 million for the year ended December 31, 2004,
- ◆ \$84.0 million for the year ended December 31, 2003, and
- ◆ \$37.6 million for the year ended December 31, 2002.

Balance Sheet

BGE participates in a cash pool under a Master Demand Note agreement with Constellation Energy. Under this arrangement, participating subsidiaries may invest in or borrow from the pool at market interest rates. Constellation Energy administers the pool and invests excess cash in short-term investments or issues commercial paper to manage consolidated cash requirements. Under this arrangement, BGE had invested \$127.9 million at December 31, 2004 and \$230.2 million at December 31, 2003.

Amounts related to corporate functions performed at the Constellation Energy holding company, BGE's purchases to meet its standard offer service obligation, BGE's charges to Constellation Energy and its nonregulated affiliates for certain services it provides them, and the participation of BGE's employees in the Constellation Energy pension plan result in intercompany balances on BGE's Consolidated Balance Sheets.

We believe our allocation methods are reasonable and approximate the costs that would be charged to unaffiliated entities.

17 Quarterly Financial Data (Unaudited)

Our quarterly financial information has not been audited but, in management's opinion, includes all adjustments necessary for a fair presentation. Our business is seasonal in nature with the peak sales periods generally occurring during the summer and winter months. Accordingly, comparisons among quarters of a year may not represent overall trends and changes in operations.

2004 Quarterly Data—Constellation Energy

	Revenues	Income from Operations	Income Before Cumulative Effects of Changes in Accounting Principles	Earnings Applicable to Common Stock	Earnings Per Share from Continuing Operations-Diluted	Earnings Per Share of Common Stock-Diluted
<i>(In millions, except per share amounts)</i>						
Quarter Ended						
March 31	\$ 3,036.6	\$ 235.7	\$112.5	\$ 66.2	\$0.66	\$ 0.39
June 30	2,793.0	195.9	130.9	128.2	0.77	0.76
September 30	3,434.5	396.5	210.6	210.4	1.19	1.19
December 31	3,285.6	249.1	134.8	134.9	0.76	0.76
Year Ended						
December 31	\$12,549.7	\$1,077.2	\$588.8	\$ 539.7	\$3.40	\$ 3.12

2004 Quarterly Data—BGE

	Revenues	Income from Operations	Earnings Applicable to Common Stock
<i>(In millions)</i>			
Quarter Ended			
March 31	\$ 803.9	\$149.8	\$ 72.7
June 30	589.8	65.6	21.9
September 30	657.3	77.1	28.1
December 31	673.7	78.9	30.4
Year Ended			
December 31	\$2,724.7	\$371.4	\$153.1

The sum of the quarterly earnings per share amounts may not equal the total for the year due to the effects of rounding and dilution as a result of issuing common shares during the year.

First quarter results include:

Constellation Energy

- ◆ a \$46.3 million loss after-tax for the discontinued operations of our Hawaiian geothermal facility, and
- ◆ gain on the sale of investments and other assets of \$1.0 million after-tax.

Second quarter results include:

Constellation Energy

- ◆ recognition of 2003 synfuel tax credits of \$35.9 million after-tax,
- ◆ a \$2.7 million loss after-tax for the discontinued operations of our Hawaiian geothermal facility,
- ◆ gain on the sale of investments of \$2.7 million after-tax, and
- ◆ an other than temporary decline in value of our investments of \$1.6 million after-tax.

Third quarter results include:

Constellation Energy

- ◆ net loss on sale of investment and other assets of \$4.6 million after-tax,
- ◆ an other than temporary decline in value of our investments of \$0.6 million after-tax, and
- ◆ a \$0.2 million loss after-tax for the discontinued operations of our Hawaiian geothermal facility.

Fourth quarter results include:

Constellation Energy

- ◆ workforce reduction costs totaling \$5.9 million after-tax,
- ◆ net gain on sale of investments of \$0.3 million after-tax, and
- ◆ a \$0.1 million gain after-tax for the discontinued operations of our Hawaiian geothermal facility.

We discuss our special items in Note 2.

2003 Quarterly Data—Constellation Energy

2003 Quarterly Data—BGE

	Revenues	Income from Operations	Income Before Cumulative Effects of Changes in Accounting Principles	(Loss) Earnings Applicable to Common Stock	Earnings Per Share Assuming Dilution Before Cumulative Effects of Changes in Accounting Principles—Diluted	(Loss) Earnings Per Share of Common Stock—Diluted	Revenues	Income from Operations	Earnings Applicable to Common Stock
Quarter Ended									
March 31	\$ 2,326.1	\$ 175.6	\$ 67.0	\$ (131.4)	\$ 0.40	\$ (0.80)	\$ 789.8	\$164.6	\$ 78.5
June 30	2,266.6	229.1	96.8	96.8	0.58	0.58	577.0	69.2	21.7
September 30	2,600.6	389.2	192.9	192.9	1.15	1.15	663.3	62.8	20.6
December 31	2,494.5	272.4	119.0	119.0	0.71	0.71	617.5	88.4	29.2
Year Ended									
December 31	\$ 9,687.8	\$ 1,066.3	\$ 475.7	\$ 277.3	\$ 2.85	\$ 1.66	\$2,647.6	\$385.0	\$150.0

The sum of the quarterly earnings per share amounts may not equal the total for the year due to the effects of rounding and dilution as a result of issuing common shares during the year.

Certain prior-period amounts have been reclassified to conform with the current year's presentation.

First quarter results include:

Constellation Energy and BGE

- ◆ workforce reduction costs totaling \$0.4 million after-tax, of which BGE recorded \$0.1 million.

Constellation Energy

- ◆ a \$266.1 million loss after-tax for the cumulative effect of adopting EITF 02-3,
- ◆ a \$67.7 million gain after-tax for the cumulative effect of adopting SFAS 143, and
- ◆ gain on the sale of investments and other assets of \$8.3 million after-tax.

Second quarter results include:

Constellation Energy and BGE

- ◆ workforce reduction costs totaling \$0.4 million after-tax, of which BGE recorded \$0.1 million.

Constellation Energy

- ◆ gain on the sale of investments of \$0.3 million after-tax.

Third quarter results include:

Constellation Energy and BGE

- ◆ workforce reduction costs totaling \$0.5 million after-tax, of which BGE recorded \$0.2 million.

Constellation Energy

- ◆ net gain on sale of investment and other assets of \$1.4 million after-tax.

Fourth quarter results include:

Constellation Energy

- ◆ net gain on sale of investments of \$6.4 million after-tax and,
- ◆ an other than temporary decline in the value of our investment in an airplane of \$0.4 million after-tax.

We discuss our special items in *Note 2*.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure
None.

Item 9A. Controls and Procedures

Evaluation of Disclosure Controls and Procedures

The principal executive officers and principal financial officer of both Constellation Energy and BGE have evaluated the effectiveness of the disclosure controls and procedures (as such term is defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended (the "Exchange Act")) as of December 31, 2004 (the "Evaluation Date"). Based on such evaluation, such officers have concluded that, as of the Evaluation Date, Constellation Energy's and BGE's disclosure controls and procedures are effective, in that they provide reasonable assurance that such officers are alerted on a timely basis to material information relating to Constellation Energy and BGE that is required to be included in Constellation Energy's and BGE's periodic filings under the Exchange Act.

Internal Control Over Financial Reporting

Constellation Energy maintains a system of internal control over financial reporting as defined in Exchange Act Rule 13a-15(f). Constellation Energy's Management Report on Internal Control Over Financial Reporting is included in Item 8. Financial Statements and Supplementary Data included in this report. As BGE is not an accelerated filer as defined in Exchange Act Rule 12b-2, it is not required to provide a report of management on the effectiveness of its internal control over financial reporting as of December 31, 2004, but will be required to do so as of December 31, 2006.

Changes in Internal Control

During the quarter ended December 31, 2004, there has been no change in either Constellation Energy's or BGE's internal control over financial reporting (as such term is defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) that has materially affected, or is reasonably likely to materially affect, either Constellation Energy's or BGE's internal control over financial reporting.

Subsequent to this reporting period, during January 2005, Constellation Energy implemented a new enterprise reporting platform, which included a general ledger and various sub-ledgers, for certain of its operating subsidiaries. Following this implementation, substantially all of Constellation Energy's operating subsidiaries are using the new system. The implementation affected systems that include certain internal controls, and accordingly, the implementation has required revisions to our internal control over financial reporting. We reviewed the system as it was implemented as well as the controls affected by the implementation of the system and made appropriate changes to affected internal controls.

Item 9B. Other Information

None.

PART III

BGE meets the conditions set forth in General Instruction I(1)(a) and (b) of Form 10-K for a reduced disclosure format. Accordingly, all items in this section related to BGE are not presented.

Item 10. Directors and Executive Officers of the Registrant

The information required by this item with respect to directors is set forth under *Election of Constellation Energy Directors* in the Proxy Statement and is incorporated herein by reference.

The information required by this item with respect to executive officers of Constellation Energy Group, pursuant to instruction 3 of paragraph (b) of Item 401 of Regulation S-K, is set forth following Item 4 of Part I of this Form 10-K under *Executive Officers of the Registrant*.

Item 11. Executive Compensation

The information required by this item is set forth under *Directors' Compensation, Executive Compensation, Common Stock Performance Graph and Report of Compensation Committee on Executive Compensation* in the Proxy Statement and is incorporated herein by reference.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Shareholder Matters

Equity Compensation Plan Information

The following table reflects our equity compensation plan information as of December 31, 2004:

<i>Plan Category</i>	(a) Number of securities to be issued upon exercise of outstanding options, warrants, and rights <i>(In thousands)</i>	(b) Weighted-average exercise price of outstanding options, warrants, and rights	(c) Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in item (a)) <i>(In thousands)</i>
Equity compensation plans approved by security holders	5,346	\$32.18	3,814
Equity compensation plans not approved by security holders	2,019	\$30.14	2,071
Total	7,365	\$31.62	5,885

The plans that do not require security holder approval are the Constellation Energy Group, Inc. 2002 Senior Management Long-Term Incentive Plan (Designated as Exhibit No. 10(v)) and the Constellation Energy Group, Inc. Management Long-Term Incentive Plan (Designated as Exhibit No. 10(w)). A brief description of the material features of each of these plans is set forth below.

2002 Senior Management Long-Term Incentive Plan

The 2002 Senior Management Long-Term Incentive Plan was effective May 24, 2002. Grants under the plan may be made to employees who are officers of Constellation Energy or hold senior management level or key employee positions with Constellation Energy or its subsidiaries. Under the plan, the Board of Constellation Energy has authorized the issuance of up to 5,000,000 shares of Constellation Energy common stock in connection with the grant of stock options, performance and service-based restricted stock and restricted stock units, performance units, stock appreciation rights, dividend equivalents and other equity awards. Any shares covered by an award that is forfeited or canceled, expires or is settled in cash, including the settlement of tax withholding obligations using shares, will become available for issuance under the plan. Shares delivered under the plan may be authorized and unissued shares, shares held in treasury or shares purchased on the open market in accordance with the applicable securities laws. Restricted stock, restricted stock unit and performance unit award payouts will be accelerated and stock options and stock appreciation rights gains will be paid in cash in the event of a change in control, as defined in the plan. The plan is administered by Constellation Energy's Chief Executive Officer.

Management Long-Term Incentive Plan

The Management Long-Term Incentive Plan was effective February 1, 1998. Grants under the plan may be made to employees of Constellation Energy who hold a management level position and other employees of Constellation Energy and its subsidiaries as may be designated by Constellation Energy's Chief Executive Officer. Under the plan, the Board of Constellation Energy has authorized the issuance of up to 3,000,000 shares of Constellation Energy common stock in connection with the grant of stock options, performance and service-based restricted stock and restricted stock units, performance units, stock appreciation rights and dividend equivalents. The number of shares available for issuance under the plan includes shares subject to awards that have lapsed or terminated. Shares delivered under the plan may be authorized and unissued shares, shares held in treasury or shares purchased on the open market in accordance with applicable securities laws. Restricted stock, restricted stock unit and performance units award payouts will be accelerated and stock options and stock appreciation rights will become fully exercisable in the event of a change in control, as defined by the plan. The plan is administered by Constellation Energy's Chief Executive Officer.

Item 13. Certain Relationships and Related Transactions

The additional information required by this item is set forth under *Certain Relationships and Transactions* in the Proxy Statement and is incorporated herein by reference.

Item 14. Principal Accountant Fees and Services

The information required by this item is set forth under *Proposal No. 2—Ratification of Appointment of PricewaterhouseCoopers LLP as Independent Registered Public Accounting Firm for 2005* in the Proxy Statement and is incorporated herein by reference.

PART IV

Item 15. Exhibits and Financial Statement Schedules

(a) The following documents are filed as a part of this Report:

1. Financial Statements:

Reports of Independent Registered Public Accounting Firm dated March 10, 2005 of PricewaterhouseCoopers LLP

Consolidated Statements of Income—Constellation Energy Group for three years ended December 31, 2004

Consolidated Balance Sheets—Constellation Energy Group at December 31, 2004 and December 31, 2003

Consolidated Statements of Cash Flows—Constellation Energy Group for three years ended December 31, 2004

Consolidated Statements of Common Shareholders' Equity and Comprehensive Income—Constellation Energy Group for three years ended December 31, 2004

Consolidated Statements of Capitalization—Constellation Energy Group at December 31, 2004 and December 31, 2003

Consolidated Statements of Income—Baltimore Gas and Electric Company for three years ended December 31, 2004

Consolidated Statements of Comprehensive Income—Baltimore Gas and Electric Company for three years ended December 31, 2004

Consolidated Balance Sheets—Baltimore Gas and Electric Company at December 31, 2004 and December 31, 2003

Consolidated Statements of Cash Flows—Baltimore Gas and Electric Company for three years ended December 31, 2004

Notes to Consolidated Financial Statements

2. Financial Statement Schedules:

Schedule II—Valuation and Qualifying Accounts

Schedules other than Schedule II are omitted as not applicable or not required.

3. Exhibits Required by Item 601 of Regulation S-K.

**Exhibit
Number**

- *2 — Agreement and Plan of Share Exchange between Baltimore Gas and Electric Company and Constellation Energy Group, Inc. dated as of February 19, 1999. (Designated as Exhibit No. 2 to the Registration Statement on Form S-4 dated March 3, 1999, File No. 33-64799.)
- *2(a) — Agreement and Plan of Reorganization and Corporate Separation (Nuclear). (Designated as Exhibit No. 2(a) to the Current Report on Form 8-K dated July 7, 2000, File Nos. 1-12869 and 1-1910.)
- *2(b) — Agreement and Plan of Reorganization and Corporate Separation (Fossil). (Designated as Exhibit No. 2(b) to the Current Report on Form 8-K dated July 7, 2000, File Nos. 1-12869 and 1-1910.)
- *3(a) — Articles of Amendment and Restatement of the Charter of Constellation Energy Group, Inc. as of April 30, 1999. (Designated as Exhibit No. 99.2 to the Current Report on Form 8-K dated April 30, 1999, File No. 1-1910.)
- *3(b) — Articles Supplementary to the Charter of Constellation Energy Group, Inc., as of July 19, 1999. (Designated as Exhibit No. 3(a) to the Quarterly Report on Form 10-Q for the quarter ended June 30, 1999, File Nos. 1-12869 and 1-1910.)
- *3(c) — Certificate of Correction to the Charter of Constellation Energy Group, Inc. as of September 13, 1999. (Designated as Exhibit No. 3(c) to the Annual Report on Form 10-K for the year ended December 31, 1999, File Nos. 1-12869 and 1-1910.)
- *3(d) — Charter of BGE, restated as of August 16, 1996. (Designated as Exhibit No. 3 to the Quarterly Report on Form 10-Q for the quarter ended September 30, 1996, File No. 1-1910.)
- *3(e) — Articles Supplementary to the Charter of Constellation Energy Group, Inc. as of November 20, 2001. (Designated as Exhibit No. 3(e) to the Annual Report on Form 10-K for the year ended December 31, 2001, File Nos. 1-12869 and 1-1910.)

- *3(f) — Bylaws of Constellation Energy Group, Inc., as amended to February 27, 2004. (Designated as Exhibit 3(a) to the Quarterly Report on Form 10-Q for the quarter ended March 31, 2004, File Nos. 1-12869 and 1-1910.)
- *3(g) — Bylaws of BGE, as amended to October 16, 1998. (Designated as Exhibit No. 3 to the Quarterly Report on Form 10-Q for the quarter ended September 30, 1998, File No. 1-1910.)

CONSTELLATION ENERGY GROUP, INC.
CERTIFICATION

I, E. Follin Smith, certify that:

1. I have reviewed this report on Form 10-K of Constellation Energy Group, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer(s) and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer(s) and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's Board of Directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.
