Eva, I was unable to open the attachment. Any suggestions as to what to try and open it in or other ways to see it. Thanks, John

John,

I'm not sure that you can view this, it's an .OCR file but it has an excellent description of the methodology locations for manual actions from both inside and outside the control room. This is for Oyster Creek. I recommend saving this file to your hard drive and opening it. The inside e-mail version is not format friendly. This file is 84 pages or so. There may be more on the docket.

 Eva,

Your point about access to the procedures is finally beginning to sink in, i.e., it's tough to do - have to have permission, etc. Would other documents, such as those related to a plant's fire protection program, fire hazards analysis, fire safe shutdown analysis, etc. have to be treated the same way? Seems like NRC would have these kinds of documents on record.

Just wondering, John

Gents,

Although referenced in inspection reports, the control of those procedures and how they are used is still the purview of the licensee. This is why we are asking permission. It would be inappropriate for us to use a document given to us for inspection to use it for a different purpose without prior approval.

Eva is working with the Regions and NEI to try and get copies of what she can. Copy her on these messages.

Check the attached listing in WordPerfect. There are some OpManAx inspection reports that may be of interest. They're available on the NRC site under power plant inspection reports by plant name and report # (e.g., 02-04 = 2002004).
