

DOCKET NUMBER  
PROPOSED RULE PR 50  
(70 FR 10901)

1

From: "Marilyn Ortt" <marilynortt@charter.net>  
To: <SECY@nrc.gov>  
Date: Wed, Apr 27, 2005 12:56 PM  
Subject: fire code changes

Please enter the following comments on proposed changes in fire protection regulations at nuclear power stations.

Any relaxation of these regulations would be ill-advised and dangerous not only to the neighbors of power plants but to the nuclear power program. One more accident and it will be all over. I would think you would be doing everything possible to build in redundancy in safety systems and regulations to make sure such a disaster does not occur. The ability to shut down the reactor core from the control room in any emergency should be central to such a program.

I urge you to reconsider this ill-advised proposal.  
Marilyn Ortt
