| in the location of storage. Also, there are several models requestd, but the inspection records indicate that they licensee has only two gauges. The application appears to be a copy of its previous application. I called the licensee to request information requested in NUREG 1556, Volume 1, Revision 1 (although the application contains most of the requested information). I offered to help him obtain Appendix B to the NUREG from NRC web site, but he stated that he does not have access to internet right now, but will get it later. I told him that he may already have the NUREG because NRC sent these documents to all licensees. The RSO stated that Route 16 is now Robert Byrd Drive and that their storage location has not changed. He confirmed that they only have two Model 3400 gauge and never had other gauges. He will fax a completed Appendix B soon. | | | |
