RE: Activities at temporary job site utilizing U.S. NRC Radioactive Material
License #06-30556-01 Amendment 01

03035316

Dear Sir or Madam:

Cabrera Services Inc. (CABRERA) is providing this written notification of its intent to utilize CABRERA Material License #06-30556-01 Amendment 01 at a temporary job site. The attached information is provided as required by license condition 17A.

We trust that this information is sufficient to grant our use of CABRERA material license # 06-30556-01 Amendment 01 at the temporary job site. This license is currently not in use at any other sites. CABRERA will notify the Regional Administrator, U.S. Nuclear Regulatory Commission, within 30 days of termination of activities at this job site in keeping with license condition 17B.

If you should have any questions regarding this notification, please contact either Henry W. Siegrist or David J. Watters at CABRERA (860) 569-0095.

Sincerely,

Henry W. Siegrist, P.E., CHP
Corporate Health Physicist

GREAT LAKES NAVAL TRAINING CENTER
GREAT LAKES, IL**

Cabrera Services, Inc. (CABRERA) is providing radiological remediation, sample analysis, and final status survey (FSS) at the Great Lakes Naval Training Center (Site) located in Great Lakes, Illinois. The work entails soil sample analysis associated with remediation and FSS activities at the Site. A gamma spectroscopy system using a non-exempt radioactive source will be utilized to calibrate sample analysis equipment used to provide the FSS for the Site. This information is being transmitted to you as required by condition 17A of the CABRERA Materials License.

BACKGROUND

The Site was formerly used by the Defense Logistics Agency as a storage area for strategic quantities of monazite sands containing thorium. Areas of potentially contaminated soil may be present in the survey units being remediated. The radiological contaminant of concern is natural thorium. The work evolution is associated with outside soils.

RADIOLOGICAL WORK DETAILS

CABRERA has prepared this notification to the NRC with respect to CABRERA'S intent to utilize the CABRERA Materials License, number 06-30556-01 Amendment 01, at the Great Lakes Naval Training Center, Great Lakes, Illinois temporary job site. As required by condition 17A of the CABRERA Materials License, the following information is provided:

Surface soils will be collected and analyzed during remediation and FSS activities on the Site. The remediated areas are expected to result in the generation of approximately 400 cubic yards in-situ contaminated soil.

Collected soil samples will be dried, sieved, and placed into 1-liter marinelli containers for radiological analysis. The samples will be analyzed onsite utilizing portable gamma spectroscopy equipment. The gamma spectroscopy equipment will be calibrated using a sealed solid source geometry marinelli container maintained under CABRERA at the Site during the work evolution. Approximately 200 soil samples will be collected and analyzed onsite and up to 20 QA samples will be analyzed by an offsite laboratory licensed to perform this work.

Investigation derived wastes (IDW) will be handled in accordance with federal and state regulations. This includes onsite samples, small amounts of contaminated PPE and equipment (gloves, smears, used marinelli containers, etc.). Total IDW is expected to be several cubic feet in volume. Cabrera will not take possession of any radioactive materials derived from the Site.

A calibration source will be utilized during this work evolution. The calibration source to be controlled under CABRERA NRC Materials License (No. 06-30556-01) is an Isotope Products 1-L marinelli beaker, source number 1088-82-1. The source has an active volume of 1,000 ml and is contained in an epoxy matrix having a density of 1.5 g/cc.

The calibration source is a multinuclide gamma sealed source containing licensed material, Americium-241. Source 1088-82-1 has a total decayed activity (as of 5/6/05) of 2.14 μ Ci. No

other radioactive materials are requested for use by this notification. The isotopes and individual activities present in the marinelli source beaker is:

Source No. 1088-82-1

²⁴¹ Am	0.0892 μCi
¹⁰⁹ Cd	1.0847 μCi
⁵⁷ Co	0.0355 μCi
¹³⁹ Ce	0.0323 μCi
²⁰³ Hg	0.0339 μCi
¹¹³ Sn	0.1147 μCi
⁸⁵ Sr	0.0888 μCi
¹³⁷ Cs	0.2003 μCi
⁸⁸ Y	0.2256 μCi
⁶⁰ Co	0.2367 μCi

The marinelli source container will be shipped to the Site directly to a CABRERA Employee. Source controls and leak tests associated with the marinelli calibration source will be performed upon receipt and follow CABRERA NRC License conditions. In addition, CABRERA Radiation Safety Procedure "Use and Control of Radioactive Check Sources", OP-009, will be utilized to document the source receipt.

The radionuclide contaminant of concern potentially present in soil and samples from the Site is natural thorium and thorium progeny.

CABRERA NRC Materials License (No. 06-30556-01) requirements, including previously submitted procedures, will be adhered to with respect to the duration of this work evolution. Radiological surveys of affected work areas, and decontamination of equipment used for the work effort will be conducted after completion of remediation investigation activities to ensure the absence of radioactive contamination. These values are consistent with NRC Regulatory Guide 1.86.

The project marinelli source receipt date is on or about June 13, 2005. Work within this scope of remediation activity is expected to be completed prior to August 1, 2005. Non-radiological activities may commence onsite earlier than the dates noted above.
