Subject: Update from the West Jefferson Site

Good afternoon guys. I have a few items to pass onto you folks this week from the West Jefferson Site activities.

* Closure Services will need to add onto the filter bed area fence to the south to accommodate more digging/sloping area for the south and end of the Abandoned North Filter Bed work (WIDE area). This fence will be of equivalent design to the existing fence and will be continuous with a locked gate. The area will be posted as an Underground Radioactive Material Area as the rest of the filter bed area is. The majority of the reason for this fence expansion is to accommodate equipment and slope back for FSS surveys rather than because we are chasing appreciable contamination in that direction.

* Scott Zoller(CS RSO) is returning to Denver next week and has appointed Darrin Ridgley(Current CS Rad Tech Support Manager) as the Associate RSO with responsibility for day to day Radiation Protection Program Compliance for CS. Scott will come back periodically to site and be available by telephone to Darrin. I have approved this request after verifying it fits with the requirements of our RPP on page 3.

* CS and DOE are anxious to backfill the Fuel Pool/Transfer Canal with flowable grout after they complete core borings through the fuel pool floor to obtain soil samples for FSS next week. It may be that we allow the Pool/Transfer Canal back fill operation to proceed at risk prior to getting the full package to NRC for review. The flowable grout is able to be dug out later if any issues arise. The flowable grout is easier to use to meet our backfill compaction requirements than regular dirt.

I understand that Mike is out on vacation thru next week and I will be out on Monday myself with Jim Hallgren having the duty. If you have any ? let us know.

Joe Jacobsen
