

June 6, 2005

ALL AGREEMENT STATES, MINNESOTA, PENNSYLVANIA

REVISION OF THE CHRONOLOGY OF NRC AMENDMENTS INCLUDING THE SUMMARY OF CHANGE DOCUMENT FOR NRC AMENDMENT "COMPATIBILITY WITH IAEA TRANSPORTATION SAFETY STANDARDS AND OTHER TRANSPORTATION SAFETY AMENDMENTS – PART 71" [RATS ID 2004-1] (STP-05- 044)

Enclosed is the Chronology of the U.S. Nuclear Regulatory Commission's (NRC) Amendments including the addition, RATS ID 2004-1, Compatibility with IAEA Transportation Safety Standards and Other Transportation Safety Amendments – Part 71. The effective date for this rule was October 1, 2004. The final rule is posted in the Federal Register, 69 FR 3697, and can be accessed through this website: <http://www.gpoaccess.gov/fr/index.html>. The chronology is enclosed in its entirety and includes final regulations adopted through October 1, 2004 as maintained by the Office of State and Tribal Programs. The chronology is for your use to plan rulemaking actions that are needed to satisfy the compatibility and health and safety category designations of the NRC regulations. This document will also be used by the Integrated Materials Performance Evaluation Program teams during upcoming program reviews. In addition, a summary of change document for this amendment has been enclosed with this letter. This summary is for your use to identify the changes to the CFR text as well as the compatibility categories associated with the changes to assist you in drafting changes to equivalent State rules.

If you have any questions regarding this correspondence, please contact me or the individual named below.

Chronology of NRC Amendments

NRC Chronology Identification	FR Notice Number (State Implementation Due Date)	RATS ID
Safety Requirements for Radiographic Equipment-Part 34	55 FR 843; (1/10/94)	1991-1
ASNT Certification of Radiographers-Part 34	56 FR 11504; (none)	1991-2
Standards for Protection Against Radiation-Part 20	56 FR 23360; 56 FR 61352; 57 FR 38588; 57 FR 57877; 58 FR 67657; 59 FR 41641; 60 FR 20183; (1/1/94)	1991-3
Notification of Incidents-Parts 20, 30, 31, 34, 39, 40, 70	56 FR 64980; (10/15/94)	1991-4
Quality Management Program and Misadministrations-Part 35	56 FR 34104; (1/27/95)	1992-1
Eliminating the Recordkeeping Requirements for Departures from Manufacturer's Instructions-Parts 30,35	57 FR 45566; (none)	1992-2
Decommissioning Recordkeeping and License Termination: Documentation Additions [Restricted areas and spill sites]-Parts 30, 40	58 FR 39628; (10/25/96)	1993-1
Licensing and Radiation Safety Requirements for Irradiators-Part 36	58 FR 7715; (7/1/96)	1993-2
Definition of Land Disposal and Waste Site QA Program-Part 61	58 FR 33886; (7/22/96)	1993-3
Self-Guarantee as an Additional Financial Mechanism-Parts 30, 40, 70	58 FR 68726; 59 FR 1618; (none)	1994-1
Uranium Mill Tailings Regulations: Conforming NRC Requirements to EPA Standards-Part 40	59 FR 28220; (7/1/97)	1994-2
Timeliness in Decommissioning Material Facilities-Parts 30, 40, 70	59 FR 36026; (8/15/97)	1994-3
Preparation, Transfer for Commercial Distribution, and Use of Byproduct Material for Medical Use-Parts 30, 32, 35	59 FR 61767; 59 FR 65243; 60 FR 322; (1/1/98)	1995-1
Frequency of Medical Examinations for Use of Respiratory Protection Equipment-Part 20	60 FR 7900; (3/13/98)	1995-2
Low-Level Waste Shipment Manifest Information and Reporting-Parts 20, 61	60 FR 15649; 60 FR 25983; (3/1/98)	1995-3

NRC Chronology Identification	FR Notice Number (State Implementation Due Date)	RATS ID
Performance Requirements for Radiography Equipment-Part 34	60 FR 28323; (6/30/98)	1995-4
Radiation Protection Requirements: Amended Definitions and Criteria-Parts 19, 20	60 FR 36038; (8/14/98)	1995-5
Clarification of Decommissioning Funding Requirements-Parts 30, 40, 70	60 FR 38235; (11/24/98)	1995-6
Medical Administration of Radiation and Radioactive Materials-Parts 20, 35	60 FR 48623; (10/20/98)	1995-7
10 CFR Part 71: Compatibility with the International Atomic Energy Agency-Part 71	60 FR 50248; 61 FR 28724; (4/1/99)	1996-1
One Time Extension of Certain Byproduct, Source and Special Nuclear Materials Licenses-Parts 30, 40, 70	61 FR 1109; (none)	1996-2
Termination or Transfer of Licensed Activities: Recordkeeping Requirements-Parts 20, 30, 40, 61, 70	61 FR 24669; (6/17/99)	1996-3
Resolution of Dual Regulation of Airborne Effluents of Radioactive Materials; Clean Air Act-Part 20	61 FR 65120; (1/9/00)	1997-1
Recognition of Agreement State Licenses in Areas Under Exclusive Federal Jurisdiction Within an Agreement State-Part 150	62 FR 1662; (2/27/00)	1997-2
Criteria for the Release of Individuals Administered Radioactive Material-Parts 20, 35	62 FR 4120; (5/29/00)	1997-3
Fissile Material Shipments and Exemptions-Part 71	62 FR 5907; (none)	1997-4
Licenses for Industrial Radiography and Radiation Safety Requirements for Industrial Radiography Operations-Parts 30, 34, 71, 150	62 FR 28947; (6/27/00)	1997-5
Radiological Criteria for License Termination-Parts 20, 30, 40, 70	62 FR 39057; (8/20/00)	1997-6
Exempt Distribution of a Radioactive Drug Containing One Microcurie of Carbon-14 Urea-Part 30	62 FR 63634; (1/02/01)	1997-7
Deliberate Misconduct by Unlicensed Persons-Parts 30, 40, 61, 70, 71, 150	63 FR 1890; 63 FR 13773; (2/12/01)	1998-1
Self-Guarantee of Decommissioning Funding by Nonprofit and Non-Bond-Issuing Licensees-Parts 30, 40, 70	63 FR 29535; (none)	1998-2
License Term for Medical Use Licenses-Part 35	63 FR 31604; (none)	1998-3

NRC Chronology Identification	FR Notice Number (State Implementation Due Date)	RATS ID
Licenses for Industrial Radiography and Radiation Safety Requirements for Industrial Radiographic Operations-Part 34	63 FR 37059; (7/9/01)	1998-4
Minor Corrections, Clarifying Changes, and a Minor Policy Change-Parts 20	63 FR 39477; 63 FR 45393; (10/26/01)	1998-5
Transfer for Disposal and Manifests: Minor Technical Conforming Amendment-Part 20	63 FR 50127; (11/20/01)	1998-6
Radiological Criteria for License Termination of Uranium Recovery Facilities-Part 40	64 FR 17506; (6/11/02)	1999-1
Requirements for Those Who Possess Certain Industrial Devices Containing Byproduct Material to Provide Requested Information-Part 31	64 FR 42269; (none)	1999-2
Respiratory Protection and Controls to Restrict Internal Exposure-Part 20	64 FR 54543; 64 FR 55524; (2/2/03)	1999-3
Energy Compensation Sources for Well Logging and Other Regulatory Clarifications-Part 39	65 FR 20337; (5/17/03)	2000-1
New Dosimetry Technology-Parts 34, 36, 39	65 FR 63750; (1/8/04)	2000-2
Requirements for Certain Generally Licensed Industrial Devices Containing Byproduct Material - Parts 30, 31, 32	65 FR 79162; (2/16/04)	2001-1
Revision of the Skin Dose Limit-Part 20	67 FR 16298; (4/5/05)	2002-1
Medical Use of Byproduct Material-Parts 20, 32, and 35	67 FR 20249; (10/24/05)	2002-2
Financial Assurance for Materials Licensees – Parts 30, 40, 70	68 FR 57327; (12/3/06)	2003-1
Compatibility With IAEA Transportation Safety Standards and Other Transportation Safety Amendments – Part 71.	69 FR 3697; (10/01/07)	2004-1

**Compatibility With IAEA Transportation Safety Standards (TS-R-1) and Other Transportation Safety Amendments
(69 FR 3697, January 26, 2004)**

RATS ID 2004-1 Effective date October 1, 2004

Due for State adoption: October 1, 2007

Please Note: The bracket “ [] “ around a compatibility category designation means that the Section may have been adopted elsewhere in a State rules and it is not necessary to adopt it again.

Please Note : Sections of Part 71 reserved for NRC use are not listed in this amendment notice. Please check the Federal Register (69 FR 3697) for those sections.

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
§ 71.0	Purpose and scope.	D, except paragraph C is [B]	<p>(a) This part establishes—</p> <p>(1) Requirements for packaging, preparation for shipment, and transportation of licensed material; and</p> <p>(2) Procedures and standards for NRC approval of packaging and shipping procedures for fissile material and for a quantity of other licensed material in excess of a Type A quantity.</p> <p>(b) The packaging and transport of licensed material are also subject to other parts of this chapter (e.g., 10 CFR parts 20, 21, 30, 40, 70, and 73) and to the regulations of other agencies (e.g., the U.S. Department of Transportation (DOT) and the U.S. Postal Service)¹ having jurisdiction over means of transport. The requirements of this part are in addition to, and not in substitution for, other requirements.</p> <p>(c) The regulations in this part apply to any licensee authorized by specific or general license issued by the Commission to receive, possess, use, or transfer licensed material, if the licensee delivers that material to a carrier for transport, transports the material outside the site of usage as specified in the NRC license, or transports that material on public highways. No provision of this part authorizes possession of licensed material.</p> <p>(d)(1) Exemptions from the requirement for license in § 71.3 are specified in § 71.14. General licenses for which no NRC package approval is required are issued in §§ 71.20 through 71.23. The general license in § 71.17 requires that an NRC certificate of compliance or other package approval be issued for the package to be used under this general license.</p> <p>(2) Application for package approval must be completed in accordance with subpart D of this part, demonstrating that the design of the package to be used satisfies the package approval standards contained in subpart E of this part, as related to the tests of subpart F of this part.</p> <p>(3) A licensee transporting licensed material, or delivering licensed material to a carrier for transport, shall comply with the operating control requirements of subpart G of this part; the quality assurance requirements of subpart H of this part; and the general provisions of subpart A of this part, including DOT regulations referenced in § 71.5.</p> <p>(e) The regulations of this part apply to any person holding, or applying for, a certificate of compliance, issued pursuant to this part, for a package intended for the transportation of radioactive material, outside the confines of a licensee’s facility or authorized place of use.</p> <p>(f) The regulations in this part apply to any person required to obtain a certificate of compliance, or an approved compliance plan, pursuant to part 76 of this chapter, if the person delivers radioactive material to a</p>

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
			<p>common or contract carrier for transport or transports the material outside the confines of the person's plant or other authorized place of use.</p> <p>(g) This part also gives notice to all persons who knowingly provide to any licensee, certificate holder, quality assurance program approval holder, applicant for a license, certificate, or quality assurance program approval, or to a contractor, or subcontractor of any of them, components, equipment, materials, or other goods or services, that relate to a licensee's, certificate holder's, quality assurance program approval holder's, or applicant's activities subject to this part, that they may be individually subject to NRC enforcement action for violation of § 71.8.</p> <p>-----</p> <p>¹ Postal Service manual (Domestic Mail Manual), Section 124, which is incorporated by reference at 39 CFR 111.1.</p>
§ 71.1	Communications and records.	D	NA
§ 71.2	Interpretations.	D	NA
§ 71.3	Requirement for license.	[B]	<p>Except as authorized in a general license or a specific license issued by the Commission, or as exempted in this part, no licensee may—</p> <p>(a) Deliver licensed material to a carrier for transport; or</p> <p>(b) Transport licensed material.</p>
§ 71.4	Definitions.	<p>[B]</p> <p>[B]</p>	<p>The following terms are as defined here for the purpose of this part. To ensure compatibility with international transportation standards, all limits in this part are given in terms of dual units: The International System of Units (SI) followed or preceded by U.S. standard or customary units. The U.S. customary units are not exact equivalents but are rounded to a convenient value, providing a functionally equivalent unit. For the purpose of this part, either unit may be used.</p> <p>A_1 means the maximum activity of special form radioactive material permitted in a Type A package. This value is either listed in Appendix A, Table A-1, of this part, or may be derived in accordance with the procedures prescribed in Appendix A of this part.</p> <p>A_2 means the maximum activity of radioactive material, other than special form material, LSA, and SCO material, permitted in a Type A package. This value is either listed in Appendix A, Table A-1, of this part, or may be derived in accordance with the procedures prescribed in Appendix A of this part.</p>

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
		<p>[B]</p> <p>D- for those States which have no licensees that use Type B packages. or [B]- for those States which have licensees that use Type B packages.</p> <p>D- for those States which have no licensees that use Type B packages. or [B]- for those States which have licensees that use Type B packages.</p> <p>D</p>	<p><i>Carrier</i> means a person engaged in the transportation of passengers or property by land or water as a common, contract, or private carrier, or by civil aircraft.</p> <p><i>Certificate holder</i> means a person who has been issued a certificate of compliance or other package approval by the Commission.</p> <p><i>Certificate of Compliance (CoC)</i> means the certificate issued by the Commission under subpart D of this part which approves the design of a package for the transportation of radioactive material.</p> <p><i>Close reflection by water</i> means immediate contact by water of sufficient thickness for maximum reflection of neutrons.</p>

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
		[B] D [B] B B D [B] [B] B [D]	<p><i>Consignment</i> means each shipment of a package or groups of packages or load of radioactive material offered by a shipper for transport.</p> <p><i>Containment system</i> means the assembly of components of the packaging intended to retain the radioactive material during transport.</p> <p><i>Conveyance</i> means: (1) For transport by public highway or rail any transport vehicle or large freight container; (2) For transport by water any vessel, or any hold, compartment, or defined deck area of a vessel including any transport vehicle on board the vessel; and (3) For transport by any aircraft.</p> <p><i>Criticality Safety Index (CSI)</i> means the dimensionless number (rounded up to the next tenth) assigned to and placed on the label of a fissile material package, to designate the degree of control of accumulation of packages containing fissile material during transportation. Determination of the criticality safety index is described in §§ 71.22, 71.23, and 71.59.</p> <p><i>Deuterium</i> means, for the purposes of §§ 71.15 and 71.22, deuterium and any deuterium compounds, including heavy water, in which the ratio of deuterium atoms to hydrogen atoms exceeds 1:5000.</p> <p><i>DOT</i> means the U.S. Department of Transportation.</p> <p><i>Exclusive use</i> means the sole use by a single consignor of a conveyance for which all initial, intermediate, and final loading and unloading are carried out in accordance with the direction of the consignor or consignee. The consignor and the carrier must ensure that any loading or unloading is performed by personnel having radiological training and resources appropriate for safe handling of the consignment. The consignor must issue specific instructions, in writing, for maintenance of exclusive use shipment controls, and include them with the shipping paper information provided to the carrier by the consignor.</p> <p><i>Fissile material</i> means the radionuclides uranium-233, uranium-235, plutonium-239, and plutonium-241, or any combination of these radionuclides. Fissile material means the fissile nuclides themselves, not material containing fissile nuclides. Unirradiated natural uranium and depleted uranium and natural uranium or depleted uranium, that has been irradiated in thermal reactors only, are not included in this definition. Certain exclusions from fissile material controls are provided in § 71.15.</p> <p><i>Graphite</i> means, for the purposes of §§ 71.15 and 71.22, graphite with a boron equivalent content less than 5 parts per million and density greater than 1.5 grams per cubic centimeter.</p> <p><i>Licensed material</i> means byproduct, source, or special nuclear material received, possessed, used, or</p>

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
		<p>[B]</p> <p>[B]</p> <p>D</p> <p>[B]</p>	<p>transferred under a general or specific license issued by the Commission pursuant to the regulations in this chapter.</p> <p><i>Low Specific Activity (LSA)</i> material means radioactive material with limited specific activity which is nonfissile or is excepted under § 71.15, and which satisfies the descriptions and limits set forth below. Shielding materials surrounding the LSA material may not be considered in determining the estimated average specific activity of the package contents. LSA material must be in one of three groups:</p> <p>(1) LSA—I.</p> <p>(i) Uranium and thorium ores, concentrates of uranium and thorium ores, and other ores containing naturally occurring radioactive radionuclides which are not intended to be processed for the use of these radionuclides;</p> <p>(ii) Solid unirradiated natural uranium or depleted uranium or natural thorium or their solid or liquid compounds or mixtures;</p> <p>(iii) Radioactive material for which the A_2 value is unlimited; or</p> <p>(iv) Other radioactive material in which the activity is distributed throughout and the estimated average specific activity does not exceed 30 times the value for exempt material activity concentration determined in accordance with Appendix A.</p> <p>(2) LSA—II.</p> <p>(i) Water with tritium concentration up to 0.8 TBq/liter (20.0 Ci/liter); or</p> <p>(ii) Other material in which the activity is distributed throughout and the average specific activity does not exceed $10^{-4} A_2/g$ for solids and gases, and $10^{-5} A_2/g$ for liquids.</p> <p>(3) LSA—III. Solids (e.g., consolidated wastes, activated materials), excluding powders, that satisfy the requirements of § 71.77, in which:</p> <p>(i) The radioactive material is distributed throughout a solid or a collection of solid objects, or is essentially uniformly distributed in a solid compact binding agent (such as concrete, bitumen, ceramic, etc.);</p> <p>(ii) The radioactive material is relatively insoluble, or it is intrinsically contained in a relatively insoluble material, so that even under loss of packaging, the loss of radioactive material per package by leaching, when placed in water for 7 days, would not exceed $0.1 A_2$; and</p> <p>(iii) The estimated average specific activity of the solid does not exceed $2 \times 10^{-3} A_2/g$.</p> <p><i>Low toxicity alpha emitters</i> means natural uranium, depleted uranium, natural thorium; uranium-235, uranium-238, thorium-232, thorium-228 or thorium-230 when contained in ores or physical or chemical concentrates or tailings; or alpha emitters with a half-life of less than 10 days.</p> <p><i>Maximum normal operating pressure</i> means the maximum gauge pressure that would develop in the containment system in a period of 1 year under the heat condition specified in § 71.71(c)(1), in the absence of venting, external cooling by an ancillary system, or operational controls during transport.</p>

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
		<p>[B]</p> <p>D</p> <p>[B]</p> <p>[B]</p> <p>[B]</p> <p>[B]</p>	<p><i>Natural thorium</i> means thorium with the naturally occurring distribution of thorium isotopes (essentially 100 weight percent thorium-232).</p> <p><i>Normal form radioactive material</i> means radioactive material that has not been demonstrated to qualify as “special form radioactive material.”</p> <p><i>Optimum interspersed hydrogenous moderation</i> means the presence of hydrogenous material between packages to such an extent that the maximum nuclear reactivity results.</p> <p><i>Package</i> means the packaging together with its radioactive contents as presented for transport.</p> <p>(1) Fissile material package or Type AF package, Type BF package, Type B(U)F package, or Type B(M)F package means a fissile material packaging together with its fissile material contents.</p> <p>(2) Type A package means a Type A packaging together with its radioactive contents. A Type A package is defined and must comply with the DOT regulations in 49 CFR part 173.</p> <p>(3) Type B package means a Type B packaging together with its radioactive contents. On approval, a Type B package design is designated by NRC as B(U) unless the package has a maximum normal operating pressure of more than 700 kPa (100 lbs/in²) gauge or a pressure relief device that would allow the release of radioactive material to the environment under the tests specified in § 71.73 (hypothetical accident conditions), in which case it will receive a designation B(M). B(U) refers to the need for unilateral approval of international shipments; B(M) refers to the need for multilateral approval of international shipments. There is no distinction made in how packages with these designations may be used in domestic transportation. To determine their distinction for international transportation, see DOT regulations in 49 CFR Part 173. A Type B package approved before September 6, 1983, was designated only as Type B. Limitations on its use are specified in § 71.19.</p> <p><i>Packaging</i> means the assembly of components necessary to ensure compliance with the packaging requirements of this part. It may consist of one or more receptacles, absorbent materials, spacing structures, thermal insulation, radiation shielding, and devices for cooling or absorbing mechanical shocks. The vehicle, tiedown system, and auxiliary equipment may be designated as part of the packaging.</p> <p><i>Special form radioactive material</i> means radioactive material that satisfies the following conditions:</p> <p>(1) It is either a single solid piece or is contained in a sealed capsule that can be opened only by destroying the capsule;</p> <p>(2) The piece or capsule has at least one dimension not less than 5 mm (0.2 in); and</p> <p>(3) It satisfies the requirements of § 71.75. A special form encapsulation designed in accordance with the requirements of § 71.4 in effect on June 30, 1983 (see 10 CFR part 71, revised as of January 1, 1983), and constructed before July 1, 1985, and a special form encapsulation designed in accordance with the requirements of § 71.4 in effect on March 31, 1996 (see 10 CFR part 71, revised as of January 1, 1983), and</p>

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
		[B] D D [B]	<p>constructed before April 1, 1998, may continue to be used. Any other special form encapsulation must meet the specifications of this definition.</p> <p><i>Specific activity of a radionuclide</i> means the radioactivity of the radionuclide per unit mass of that nuclide. The specific activity of a material in which the radionuclide is essentially uniformly distributed is the radioactivity per unit mass of the material.</p> <p><i>Spent nuclear fuel or Spent fuel</i> means fuel that has been withdrawn from a nuclear reactor following irradiation, has undergone at least 1 year's decay since being used as a source of energy in a power reactor, and has not been chemically separated into its constituent elements by reprocessing. Spent fuel includes the special nuclear material, byproduct material, source material, and other radioactive materials associated with fuel assemblies.</p> <p><i>State</i> means a State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.</p> <p><i>Surface Contaminated Object (SCO)</i> means a solid object that is not itself classed as radioactive material, but which has radioactive material distributed on any of its surfaces. SCO must be in one of two groups with surface activity not exceeding the following limits:</p> <p>(1) SCO–I: A solid object on which:</p> <p>(i) The nonfixed contamination on the accessible surface averaged over 300 Cm² (or the area of the surface if less than 300 Cm²) does not exceed 4 Bq/Cm² (10⁻⁴ microcurie/Cm²) for beta and gamma and low toxicity alpha emitters, or 0.4 Bq/Cm² (10⁻⁵ microcurie/Cm²) for all other alpha emitters;</p> <p>(ii) The fixed contamination on the accessible surface averaged over 300 Cm² (or the area of the surface if less than 300 Cm²) does not exceed 4 × 10⁻⁴ Bq/Cm² (1.0 microcurie/Cm²) for beta and gamma and low toxicity alpha emitters, or 4 × 10³ Bq/Cm² (0.1 microcurie/Cm²) for all other alpha emitters; and</p> <p>(iii) The nonfixed contamination plus the fixed contamination on the inaccessible surface averaged over 300 Cm² (or the area of the surface if less than 300 Cm²) does not exceed 4 × 10⁴ Bq/Cm² (1 microcurie/Cm²) for beta and gamma and low toxicity alpha emitters, or 4 × 10³ Bq/Cm² (0.1 microcurie/Cm²) for all other alpha emitters.</p> <p>(2) SCO–II: A solid object on which the limits for SCO–I are exceeded and on which:</p> <p>(i) The nonfixed contamination on the accessible surface averaged over 300 Cm² (or the area of the surface if less than 300 Cm²) does not exceed 400 Bq/Cm² (10⁻² microcurie/Cm²) for beta and gamma and low toxicity alpha emitters or 40 Bq/Cm² (10⁻³ microcurie/Cm²) for all other alpha emitters;</p> <p>(ii) The fixed contamination on the accessible surface averaged over 300 Cm² (or the area of the surface if less than 300 Cm²) does not exceed 8 × 10⁵ Bq/Cm² (20 microcuries/Cm²) for beta and gamma and low toxicity</p>

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
		<p>[B]</p> <p>[B]</p> <p>[B]</p> <p>[B]</p> <p>[B]</p>	<p>alpha emitters, or 8×10^4 Bq/Cm² (2 microcuries/Cm²) for all other alpha emitters; and</p> <p>(iii) The nonfixed contamination plus the fixed contamination on the inaccessible surface averaged over 300 Cm² (or the area of the surface if less than 300 2) does not exceed 8×10^5 Bq/ Cm² (20 microcuries/Cm²) for beta and gamma and low toxicity alpha emitters, or 8×10^4 Bq/Cm² (2 microcuries/Cm²) for all other alpha emitters.</p> <p><i>Transport index (TI)</i> means the dimensionless number (rounded up to the next tenth) placed on the label of a package, to designate the degree of control to be exercised by the carrier during transportation. The transport index is the number determined by multiplying the maximum radiation level in millisievert (mSv) per hour at 1 meter (3.3 ft) from the external surface of the package by 100 (equivalent to the maximum radiation level in millirem per hour at 1 meter (3.3 ft)).</p> <p><i>Type A quantity</i> means a quantity of radioactive material, the aggregate radioactivity of which does not exceed A₁ for special form radioactive material, or A₂, for normal form radioactive material, where A₁ and A₂ are given in Table A–1 of this part, or may be determined by procedures described in Appendix A of this part.</p> <p><i>Type B quantity</i> means a quantity of radioactive material greater than a Type A quantity.</p> <p><i>Unirradiated uranium</i> means uranium containing not more than 2×10^3 Bq of plutonium per gram of uranium-235, not more than 9×10^6 Bq of fission products per gram of uranium-235, and not more than 5×10^{-3} g of uranium-236 per gram of uranium-235.</p> <p><i>Uranium—natural, depleted, enriched:</i></p> <p>(1) Natural uranium means uranium with the naturally occurring distribution of uranium isotopes (approximately 0.711 weight percent uranium-235, and the remainder by weight essentially uranium-238).</p> <p>(2) Depleted uranium means uranium containing less uranium-235 than the naturally occurring distribution of uranium isotopes.</p> <p>(3) Enriched uranium means uranium containing more uranium-235 than the naturally occurring distribution of uranium isotopes.</p>
§ 71.5	Transportation of licensed material.	[B]	<p>(a) Each licensee who transports licensed material outside the site of usage, as specified in the NRC license, or where transport is on public highways, or who delivers licensed material to a carrier for transport, shall comply with the applicable requirements of the DOT regulations in 49 CFR parts 170 through 189 appropriate to the mode of transport.</p> <p>(1) The licensee shall particularly note DOT regulations in the following areas:</p> <p>(i) Packaging—49 CFR part 173: subparts A, B, and I.</p>

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
			<p>(ii) Marking and labeling—49 CFR part 172: subpart D, §§ 172.400 through 172.407, §§ 172.436 through 172.440, and subpart E.</p> <p>(iii) Placarding—49 CFR part 172: subpart F, especially §§ 172.500 through 172.519, 172.556, and appendices B and C.</p> <p>(iv) Accident reporting—49 CFR part 171: §§ 171.15 and 171.16.</p> <p>(v) Shipping papers and emergency information—49 CFR part 172: subparts C and G.</p> <p>(vi) Hazardous material employee training—49 CFR part 172: subpart H.</p> <p>(vii) Hazardous material shipper/carrier registration—49 CFR part 107: subpart G.</p> <p>(2) The licensee shall also note DOT regulations pertaining to the following modes of transportation:</p> <p>(i) Rail—49 CFR part 174: subparts A through D and K.</p> <p>(ii) Air—49 CFR part 175.</p> <p>(iii) Vessel—49 CFR part 176: subparts A through F and M.</p> <p>(iv) Public Highway—49 CFR part 177 and parts 390 through 397.</p> <p>(b) If DOT regulations are not applicable to a shipment of licensed material, the licensee shall conform to the standards and requirements of the DOT specified in paragraph (a) of this section to the same extent as if the shipment or transportation were subject to DOT regulations. A request for modification, waiver, or exemption from those requirements, and any notification referred to in those requirements, must be filed with, or made to, the Director, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001.</p>

			nitrogen to uranium atomic ratio (N/U) of 2. The material must be contained in at least a DOT Type A package. (f) Packages containing, individually, a total plutonium mass of not more than 1000 grams, of which not more than 20 percent by mass may consist of plutonium-239, plutonium-241, or any combination of these radionuclides.
§ 71.16			[Reserved]
§ 71.17	General license: NRC-approved package.	[B]	<p>(a) A general license is issued to any licensee of the Commission to transport, or to deliver to a carrier for transport, licensed material in a package for which a license, certificate of compliance (CoC), or other approval has been issued by the NRC.</p> <p>(b) This general license applies only to a licensee who has a quality assurance program approved by the Commission as satisfying the provisions of subpart H of this part.</p> <p>(c) This general license applies only to a licensee who—</p> <ol style="list-style-type: none"> (1) Has a copy of the CoC, or other approval of the package, and has the drawings and other documents referenced in the approval relating to the use and maintenance of the packaging and to the actions to be taken before shipment; (2) Complies with the terms and conditions of the license, certificate, or other approval, as applicable, and the applicable requirements of subparts A, G, and H of this part; and (3) Before the licensee's first use of the package, submits in writing to: ATTN: Document Control Desk, Director, Spent Fuel Project Office, Office of Nuclear Material Safety and Safeguards, using an appropriate method listed in § 71.1(a), the licensee's name and license number and the package identification number specified in the package approval. <p>(d) This general license applies only when the package approval authorizes use of the package under this general license.</p> <p>(e) For a Type B or fissile material package, the design of which was approved by NRC before April 1, 1996, the general license is subject to the additional restrictions of § 71.19.</p>
§ 71.18			[Reserved]
§ 71.20	General license: DOT specification container.	[B]	<p>(a) A general license is issued to any licensee of the Commission to transport, or to deliver to a carrier for transport, licensed material in a specification container for fissile material or for a Type B quantity of radioactive material as specified in DOT regulations at 49 CFR parts 173 and 178.</p> <p>(b) This general license applies only to a licensee who has a quality assurance program approved by the Commission as satisfying the provisions of subpart H of this part.</p> <p>(c) This general license applies only to a licensee who—</p> <ol style="list-style-type: none"> (1) Has a copy of the specification; and (2) Complies with the terms and conditions of the specification and the applicable requirements of subparts A, G, and H of this part. <p>(d) This general license is subject to the limitation that the specification container may not be used for a</p>

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
			shipment to a location outside the United States, except by multilateral approval, as defined in DOT regulations at 49 CFR 173.403. (e) This section expires October 1, 2008.
§ 71.21	General license: Use of foreign approved package.	[B]	<p>(a) A general license is issued to any licensee of the Commission to transport, or to deliver to a carrier for transport, licensed material in a package, the design of which has been approved in a foreign national competent authority certificate, that has been revalidated by DOT as meeting the applicable requirements of 49 CFR 171.12.</p> <p>(b) Except as otherwise provided in this section, the general license applies only to a licensee who has a quality assurance program approved by the Commission as satisfying the applicable provisions of subpart H of this part.</p> <p>(c) This general license applies only to shipments made to or from locations outside the United States.</p> <p>(d) This general license applies only to a licensee who—</p> <p>(1) Has a copy of the applicable certificate, the revalidation, and the drawings and other documents referenced in the certificate, relating to the use and maintenance of the packaging and to the actions to be taken before shipment; and</p> <p>(2) Complies with the terms and conditions of the certificate and revalidation, and with the applicable requirements of subparts A, G, and H of this part. With respect to the quality assurance provisions of subpart H of this part, the licensee is exempt from design, construction, and fabrication considerations.</p>
§ 71.22	General license: Fissile material.	[B]	<p>REFERENCE 10CFR71 for Tables 71-1 and 71-2</p> <p>(a) A general license is issued to any licensee of the Commission to transport fissile material, or to deliver fissile material to a carrier for transport, if the material is shipped in accordance with this section. The fissile material need not be contained in a package which meets the standards of subparts E and F of this part; however, the material must be contained in a Type A package. The Type A package must also meet the DOT requirements of 49 CFR 173.417(a).</p> <p>(b) The general license applies only to a licensee who has a quality assurance program approved by the Commission as satisfying the provisions of subpart H of this part.</p> <p>(c) The general license applies only when a package's contents:</p> <p>(1) Contain less than a Type A quantity of fissile material; and</p> <p>(2) Contain less than 500 total grams of beryllium, graphite, or hydrogenous material enriched in deuterium.</p> <p>(d) The general license applies only to packages containing fissile material that are labeled with a CSI which:</p> <p>(1) Has been determined in accordance with paragraph (e) of this section;</p> <p>(2) Has a value less than or equal to 10; and</p> <p>(3) For a shipment of multiple packages containing fissile material, the sum of the CSIs must be less than or equal to 50 (for shipment on a nonexclusive use conveyance) and less than or equal to 100 (for shipment on an exclusive use conveyance).</p> <p>(e)(1) The value for the CSI must be greater than or equal to the number calculated by the following equation:</p>

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
			$CSI = 10 \left[\frac{\text{grams of } ^{235}\text{U}}{X} + \frac{\text{grams of } ^{233}\text{U}}{Y} + \frac{\text{grams of Pu}}{Z} \right]$ <p>(2) The calculated CSI must be rounded up to the first decimal place;</p> <p>(3) The values of X, Y, and Z used in the CSI equation must be taken from Tables 71–1 or 71–2, as appropriate;</p> <p>(4) If Table 71–2 is used to obtain the value of X, then the values for the terms in the equation for uranium-233 and plutonium must be assumed to be zero; and</p> <p>(5) Table 71–1 values for X, Y, and Z must be used to determine the CSI if:</p> <p>(i) Uranium-233 is present in the package;</p> <p>(ii) The mass of plutonium exceeds 1 percent of the mass of uranium-235;</p> <p>(iii) The uranium is of unknown uranium-235 enrichment or greater than 24 weight percent enrichment; or</p> <p>(iv) Substances having a moderating effectiveness (i.e., an average hydrogen density greater than H₂O) (e.g., certain hydrocarbon oils or plastics) are present in any form, except as polyethylene used for packing or wrapping.</p>
§ 71.23	General license: Plutoniumberyllium special form material.	[B]	<p>(a) A general license is issued to any licensee of the Commission to transport fissile material in the form of plutonium-beryllium (Pu-Be) special form sealed sources, or to deliver Pu-Be sealed sources to a carrier for transport, if the material is shipped in accordance with this section. This material need not be contained in a package which meets the standards of subparts E and F of this part; however, the material must be contained in a Type A package. The Type A package must also meet the DOT requirements of 49 CFR 173.417(a).</p> <p>(b) The general license applies only to a licensee who has a quality assurance program approved by the Commission as satisfying the provisions of subpart H of this part.</p> <p>(c) The general license applies only when a package's contents:</p> <p>(1) Contain less than a Type A quantity of material; and</p> <p>(2) Contain less than 1000 g of plutonium, provided that: plutonium-239, plutonium-241, or any combination of these radionuclides, constitutes less than 240 g of the total quantity of plutonium in the package.</p> <p>(d) The general license applies only to packages labeled with a CSI which:</p> <p>(1) Has been determined in accordance with paragraph (e) of this section;</p> <p>(2) Has a value less than or equal to 100; and</p> <p>(3) For a shipment of multiple packages containing Pu-Be sealed sources, the sum of the CSIs must be less than or equal to 50 (for shipment on a nonexclusive use conveyance) and less than or equal to 100 (for shipment on an exclusive use conveyance).</p> <p>(e)(1) The value for the CSI must be greater than or equal to the number calculated by the following equation:</p> $CSI = 10 \left[\frac{\text{grams of } ^{239}\text{Pu} + \text{grams of } ^{241}\text{Pu}}{24} \right]; \text{ and}$

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
			(2) The calculated CSI must be rounded up to the first decimal place.
§ 71.24			[Reserved]
§ 71.25			[Reserved]
§ 71.47	External radiation standards for all packages	[B]	<p>(a) Except as provided in paragraph (b) of this section, each package of radioactive materials offered for transportation must be designed and prepared for shipment so that under conditions normally incident to transportation the radiation level does not exceed 2 mSv/h (200 mrem/h) at any point on the external surface of the package, and the transport index does not exceed 10.</p> <p>(b) A package that exceeds the radiation level limits specified in paragraph (a) of this section must be transported by exclusive use shipment only, and the radiation levels for such shipment must not exceed the following during transportation:</p> <p>(1) 2 mSv/h (200 mrem/h) on the external surface of the package, unless the following conditions are met, in which case the limit is 10 mSv/h (1000 mrem/h):</p> <ul style="list-style-type: none"> (i) The shipment is made in a closed transport vehicle; (ii) The package is secured within the vehicle so that its position remains fixed during transportation; and (iii) There are no loading or unloading operations between the beginning and end of the transportation; <p>(2) 2 mSv/h (200 mrem/h) at any point on the outer surface of the vehicle, including the top and underside of the vehicle; or in the case of a flat-bed style vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load or enclosure, if used, and on the lower external surface of the vehicle; and</p> <p>(3) 0.1 mSv/h (10 mrem/h) at any point 2 meters (80 in) from the outer lateral surfaces of the vehicle (excluding the top and underside of the vehicle); or in the case of a flat-bed style vehicle, at any point 2 meters (6.6 feet) from the vertical planes projected by the outer edges of the vehicle (excluding the top and underside of the vehicle); and</p> <p>(4) 0.02 mSv/h (2 mrem/h) in any normally occupied space, except that this provision does not apply to private carriers, if exposed personnel under their control wear radiation dosimetry devices in conformance with 10 CFR 20.1502.</p> <p>(c) For shipments made under the provisions of paragraph (b) of this section, the shipper shall provide specific written instructions to the carrier for maintenance of the exclusive use shipment controls. The instructions must be included with the shipping paper information.</p> <p>(d) The written instructions required for exclusive use shipments must be sufficient so that, when followed, they will cause the carrier to avoid actions that will unnecessarily delay delivery or unnecessarily result in increased radiation levels or radiation exposures to transport workers or members of the general public.</p>
§ 71.53			[Reserved]
§ 71.81	Applicability of operating	D	NA

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
	controls and procedures.		
§ 71.83	Assumptions as to unknown properties.	[B]	When the isotopic abundance, mass, concentration, degree of irradiation, degree of moderation, or other pertinent property of fissile material in any package is not known, the licensee shall package the fissile material as if the unknown properties have credible values that will cause the maximum neutron multiplication.
§ 71.85	Preliminary determinations	[B]	<p>Before the first use of any packaging for the shipment of licensed material --</p> <p>(a) The licensee shall ascertain that there are no cracks, pinholes, uncontrolled voids, or other defects that could significantly reduce the effectiveness of the packaging;</p> <p>(b) Where the maximum normal operating pressure will exceed 35 kPa (5 lbf/in²) gauge, the licensee shall test the containment system at an internal pressure at least 50 percent higher than the maximum normal operating pressure, to verify the capability of that system to maintain its structural integrity at that pressure; and</p> <p>(c) The licensee shall conspicuously and durably mark the packaging with its model number, serial number, gross weight, and a package identification number assigned by NRC. Before applying the model number, the licensee shall determine that the packaging has been fabricated in accordance with the design approved by the Commission.</p>
§ 71.87	Routine determinations	[B]	<p>Before each shipment of licensed material, the licensee shall ensure that the package with its contents satisfies the applicable requirements of this part and of the license. The licensee shall determine that --</p> <p>(a) The package is proper for the contents to be shipped;</p> <p>(b) The package is in unimpaired physical condition except for superficial defects such as marks or dents;</p> <p>(c) Each closure device of the packaging, including any required gasket, is properly installed and secured and free of defects;</p> <p>(d) Any system for containing liquid is adequately sealed and has adequate space or other specified provision for expansion of the liquid;</p> <p>(e) Any pressure relief device is operable and set in accordance with written procedures;</p> <p>(f) The package has been loaded and closed in accordance with written procedures;</p> <p>(g) For fissile material, any moderator or neutron absorber, if required, is present and in proper condition;</p> <p>(h) Any structural part of the package that could be used to lift or tie down the package during transport is rendered inoperable for that purpose, unless it satisfies the design requirements of § 71.45;</p> <p>(i) The level of non-fixed (removable) radioactive contamination on the external surfaces of each package offered for shipment is as low as reasonably achievable, and within the limits specified in DOT regulations in 49 CFR 173.443;</p> <p>(j) External radiation levels around the package and around the vehicle, if applicable, will not exceed the limits specified in § 71.47 at any time during transportation; and</p> <p>(k) Accessible package surface temperatures will not exceed the limits specified in § 71.43(g) at any time during transportation.</p>

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
§ 71.88	Air transport of plutonium.	[B]	<p>(a) Notwithstanding the provisions of any general licenses and notwithstanding any exemptions stated directly in this part or included indirectly by citation of 49 CFR chapter I, as may be applicable, the licensee shall assure that plutonium in any form, whether for import, export, or domestic shipment, is not transported by air or delivered to a carrier for air transport unless:</p> <p>(1) The plutonium is contained in a medical device designed for individual human application; or</p> <p>(2) The plutonium is contained in a material in which the specific activity is less than or equal to the activity concentration values for plutonium specified in Appendix A, Table A-2, of this part, and in which the radioactivity is essentially uniformly distributed; or</p> <p>(3) The plutonium is shipped in a single package containing no more than an A₂ quantity of plutonium in any isotope or form, and is shipped in accordance with § 71.5; or</p> <p>(4) The plutonium is shipped in a package specifically authorized for the shipment of plutonium by air in the Certificate of Compliance for that package issued by the Commission.</p> <p>(b) Nothing in paragraph (a) of this section is to be interpreted as removing or diminishing the requirements of § 73.24 of this chapter.</p> <p>(c) For a shipment of plutonium by air which is subject to paragraph (a)(4) of this section, the licensee shall, through special arrangement with the carrier, require compliance with 49 CFR 175.704, U.S. Department of Transportation regulations applicable to the air transport of plutonium.</p>
§ 71.89	Opening instructions.	[B]	Before delivery of a package to a carrier for transport, the licensee shall ensure that any special instructions needed to safely open the package have been sent to, or otherwise made available to, the consignee for the consignee's use in accordance with 10 CFR 20.1906(e).

		<p>for those States which have no users of Type B packages-other than Industrial Radiography**</p> <p>C- Paragraphs (a), (b) and (c)(1) are designated C for those States which have users of Type B packages-other than Industrial Radiography.**</p> <p>D- paragraph (f)</p> <p>C- paragraph (g)</p> <p>NRC- paragraphs (c)(2), (d) and (e)</p> <p>**Note: 10 CFR Part 71.101 (g) indicates that QA programs for industrial radiography Type B Package users are covered by 10 CFR 34.31(b). It is also indicated that this section satisfies § 71.12 (b) and thus would satisfy those sections</p>	<p>assurance” comprises all those planned and systematic actions necessary to provide adequate confidence that a system or component will perform satisfactorily in service. Quality assurance includes quality control, which comprises those quality assurance actions related to control of the physical characteristics and quality of the material or component to predetermined requirements. The licensee, certificate holder, and applicant for a CoC are responsible for the quality assurance requirements as they apply to design, fabrication, testing, and modification of packaging. Each licensee is responsible for the quality assurance provision which applies to its use of a packaging for the shipment of licensed material subject to this subpart.</p> <p>(b) Establishment of program. Each licensee, certificate holder, and applicant for a CoC shall establish, maintain, and execute a quality assurance program satisfying each of the applicable criteria of §§ 71.101 through 71.137 and satisfying any specific provisions that are applicable to the licensee’s activities including procurement of packaging. The licensee, certificate holder, and applicant for a CoC shall execute the applicable criteria in a graded approach to an extent that is commensurate with the quality assurance requirement’s importance to safety.</p> <p>(c) Approval of program.</p> <p>(1) Before the use of any package for the shipment of licensed material subject to this subpart, each licensee shall obtain Commission approval of its quality assurance program. Using an appropriate method listed in § 71.1(a), each licensee shall file a description of its quality assurance program, including a discussion of which requirements of this subpart are applicable and how they will be satisfied, by submitting the description to: ATTN: Document Control Desk, Director, Spent Fuel Project Office, Office of Nuclear Material Safety and Safeguards.</p> <p>(2) Before the fabrication, testing, or modification of any package for the shipment of licensed material subject to this subpart, each licensee, certificate holder, or applicant for a CoC shall obtain Commission approval of its quality assurance program. Each certificate holder or applicant for a CoC shall, in accordance with § 71.1, file a description of its quality assurance program, including a discussion of which requirements of this subpart are applicable and how they will be satisfied.</p> <p>(d) Existing package designs. The provisions of this paragraph deal with packages that have been approved for use in accordance with this part before January 1, 1979, and which have been designed in accordance with the provisions of this part in effect at the time of application for package approval. Those packages will be accepted as having been designed in accordance with a quality assurance program that satisfies the provisions of paragraph (b) of this section.</p> <p>(e) Existing packages. The provisions of this paragraph deal with packages that have been approved for use in accordance with this part before January 1, 1979, have been at least partially fabricated before that date, and for which the fabrication is in accordance with the provisions of this part in effect at the time of application for approval of package design. These packages will be accepted as having been fabricated and assembled in accordance with a quality assurance program that satisfies the provisions of paragraph (b) of this section.</p> <p>(f) Previously approved programs. A Commission-approved quality assurance program that satisfies the applicable criteria of subpart H of this part, Appendix B of part 50 of this chapter, or subpart G of part 72 of this chapter, and that is established, maintained, and executed regarding transport packages, will be accepted as</p>

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
		referenced in this provision (§§ 71.101 through 71.137)	satisfying the requirements of paragraph (b) of this section. Before first use, the licensee, certificate holder, and applicant for a CoC shall notify the NRC, in accordance with § 71.1, of its intent to apply its previously approved subpart H, Appendix B, or subpart G quality assurance program to transportation activities. The licensee, certificate holder, and applicant for a CoC shall identify the program by date of submittal to the Commission, Docket Number, and date of Commission approval. (g) Radiography containers. A program for transport container inspection and maintenance limited to radiographic exposure devices, source changers, or packages transporting these devices and meeting the requirements of § 34.31(b) of this chapter or equivalent Agreement State requirement, is deemed to satisfy the requirements of §§ 71.17(b) and 71.101(b).
§ 71.103	Quality assurance organization.	<p>D- for those States which have no users of Type B packages-other than Industrial Radiography**</p> <p>[C]- Paragraph (a) is designated [C] for those States which have users of Type B packages-other than Industrial Radiography**</p> <p>C-Paragraph (b) is designated C for those States which have users of Type B packages-other than Industrial Radiography**</p> <p>D- paragraphs (d), (e), and (f)</p> <p>**Note: 10 CFR</p>	<p>(a) The licensee², certificate holder, and applicant for a CoC shall be responsible for the establishment and execution of the quality assurance program. The licensee, certificate holder, and applicant for a CoC may delegate to others, such as contractors, agents, or consultants, the work of establishing and executing the quality assurance program, or any part of the quality assurance program, but shall retain responsibility for the program. These activities include performing the functions associated with attaining quality objectives and the quality assurance functions.</p> <p>(b) The quality assurance functions are—</p> <p>(1) Assuring that an appropriate quality assurance program is established and effectively executed; and</p> <p>(2) Verifying, by procedures such as checking, auditing, and inspection, that activities affecting the functions that are important to safety have been correctly performed.</p> <p>(c) The persons and organizations performing quality assurance functions must have sufficient authority and organizational freedom to—</p> <p>(1) Identify quality problems;</p> <p>(2) Initiate, recommend, or provide solutions; and</p> <p>(3) Verify implementation of solutions.</p> <p>(d) The persons and organizations performing quality assurance functions shall report to a management level that assures that the required authority and organizational freedom, including sufficient independence from cost and schedule, when opposed to safety considerations, are provided.</p> <p>(e) Because of the many variables involved, such as the number of personnel, the type of activity being performed, and the location or locations where activities are performed, the organizational structure for executing the quality assurance program may take various forms, provided that the persons and organizations assigned the quality assurance functions have the required authority and organizational freedom.</p> <p>(f) Irrespective of the organizational structure, the individual(s) assigned the responsibility for assuring effective execution of any portion of the quality assurance program, at any location where activities subject to this section are being performed, must have direct access to the levels of management necessary to perform this function.</p> <p>² While the term “licensee” is used in these criteria, the requirements are applicable to whatever design, fabrication, assembly, and testing of the package is accomplished with respect to a package before the time a package approval is issued.</p>

The audits must be performed in accordance with written procedures or checklists by appropriately trained personnel not having direct responsibilities in the areas being audited. Audited results must be documented and reviewed by management having responsibility in the area audited. Followup action, including reaudit of deficient areas, must be taken where indicated.</p>
Appendix A to Part 71	Determination of A ₁ and A ₂	[B]	REFERENCE 10CFR71 FOR TABLES A-1, A-2, A-3, and A-4

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
			<p>I. Values of A_1 and A_2 for individual radionuclides, which are the bases for many activity limits elsewhere in these regulations, are given in Table A-1. The curie (Ci) values specified are obtained by converting from the Terabecquerel (TBq) figure. The curie values are expressed to three significant figures to assure that the difference in the TBq and Ci quantities is one tenth of one percent or less. Where values of A_1 and A_2 are unlimited, it is for radiation control purposes only. For nuclear criticality safety, some materials are subject to controls placed on fissile material.</p> <p>II. a. For individual radionuclides whose identities are known, but which are not listed in Table A-1, the A_1 and A_2 values contained in Table A-3 may be used. Otherwise, the licensee shall obtain prior Commission approval of the A_1 and A_2 values for radionuclides not listed in Table A-1, before shipping the material.</p> <p>b. For individual radionuclides whose identities are known, but which are not listed in Table A-2, the exempt material activity concentration and exempt consignment activity values contained in Table A-3 may be used. Otherwise, the licensee shall obtain prior Commission approval of the exempt material activity concentration and exempt consignment activity values for radionuclides not listed in Table A-2, before shipping the material.</p> <p>c. The licensee shall submit requests for prior approval, described under paragraphs II.a. and II.b. of this Appendix, to the Commission, in accordance with § 71.1 of this part.</p> <p>III. In the calculations of A_1 and A_2 for a radionuclide not in Table A-1, a single radioactive decay chain, in which radionuclides are present in their naturally occurring proportions, and in which no daughter radionuclide has a half-life either longer than 10 days, or longer than that of the parent radionuclide, shall be considered as a single radionuclide, and the activity to be taken into account, and the A_1 and A_2 value to be applied, shall be those corresponding to the parent radionuclide of that chain. In the case of radioactive decay chains in which any daughter radionuclide has a half-life either longer than 10 days, or greater than that of the parent radionuclide, the parent and those daughter radionuclides shall be considered as mixtures of different radionuclides.</p> <p>IV. For mixtures of radionuclides whose identities and respective activities are known, the following conditions apply:</p> <p>a. For special form radioactive material, the maximum quantity transported in a Type A package is as follows:</p> $\sum_I \frac{B(i)}{A_1(i)} \leq 1$ <p>where $B(i)$ is the activity of radionuclide I, and $A_1(i)$ is the A_1 value for radionuclide I.</p> <p>b. For normal form radioactive material, the maximum quantity transported in a Type A package is as follows:</p>

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
			$\sum_I \frac{B(i)}{A_2(i)} \leq 1$ <p>where B(i) is the activity of radionuclide I, and A₂(i) is the A₂(i) value for radionuclide I.</p> <p>c. Alternatively, the A₁ value for mixtures of special form material may be determined as follows:</p> $A_1 \text{ for mixture} = \frac{1}{\sum_I \frac{f(i)}{A_1(i)}}$ <p>where f(i) is the fraction of activity for radionuclide I in the mixture, and A₁(i) is the appropriate A₁ value for radionuclide I.</p> <p>d. Alternatively, the A₂ value for mixtures of normal form material may be determined as follows:</p> $A_2 \text{ for mixture} = \frac{1}{\sum_I \frac{f(i)}{A_2(i)}}$ <p>where f(i) is the fraction of activity for radionuclide I in the mixture, and A₂(i) is the appropriate A₂ value for radionuclide I.</p> <p>e. The exempt activity concentration for mixtures of nuclides may be determined as follows:</p> $\text{Exempt activity concentration for mixture} = \frac{1}{\sum_I \frac{f(i)}{[A](i)}}$ <p>where f(i) is the fraction of activity concentration of radionuclide I in the mixture, and [A] is the activity concentration for exempt material containing radionuclide I.</p>

Change to NRC Section	Title	Compatibility Category	Summary of Change To CFR
			<p>f. The activity limit for an exempt consignment for mixtures of radionuclides may be determined as follows:</p> <p style="text-align: center;">Exempt consignment activity limit for mixture $= \frac{1}{\sum_i \frac{f(i)}{A(i)}}$</p> <p>where f(i) is the fraction of activity of radionuclide I in the mixture, and A is the activity limit for exempt consignments for radionuclide I.</p> <p>V. When the identity of each radionuclide is known, but the individual activities of some of the radionuclides are not known, the radionuclides may be grouped, and the lowest A₁ or A₂ value, as appropriate, for the radionuclides in each group may be used in applying the formulas in paragraph IV. Groups may be based on the total alpha activity and the total beta/gamma activity when these are known, using the lowest A₁ or A₂ values for the alpha emitters and beta/gamma emitters.</p>
