Subject: Alert Declared at Millstone Unit 3 on Sunday

On April 17, 2005, at 8:29 a.m. Millstone Unit 3 experienced a reactor trip from full power. In addition to the reactor trip, one of two trains of the Safety Injection (SI) and Main Steam Isolation (MSI) subsystems actuated. Control room operators manually initiated a full SI and MSI. There were also indications that multiple main steam line safety valves (MSSVs) opened with at least one MSSV that appeared to remain open.

This is being sent to notify recipients of a new posting on the @Operating Experience Community Forum related to this event. Recipients are expected to review the posting for applicability to their areas of regulatory responsibility and consider appropriate actions. However, information contained in the posting is not tasking; therefore, no specific action or written response is required.

To review this posting, please visit:
