

UNITED STATES GOVERNMENT

Memorandum

TO : Eber R. Price, Assistant Director
Division of Licensing and Regulation

DATE: September 2, 1960

FROM : *JET* James E. Turner, Health Physicist, Health
Protection Branch, Office of Health & Safety

SUBJECT: PHILADELPHIA ELECTRIC COMPANY (PEACH BOTTOM SITE)

Reference is made to your memorandum of July 28 to Dr. Western requesting our comments on the Peach Bottom Reactor. We have reviewed the reports, volumes I and II of Part B.

From the integrated gamma doses given on page VII - 28 of volume I, it does not appear likely that members of the public would be exposed to excessive amounts of radiation from the maximum credible accident as postulated in the report. If the postulated accident does represent the worst credible case, then the proposed operation appears to represent an acceptable hazard to the population.
