Subject: questions about Louisiana Energy services plant to Timothy Johnson

The LES plant will emit U234, U235, u236, U238. Mr. Johnson and Mr. Farquhar, are these substances beneficial for health?

The net lists them as cancer causers.

Will the LES enrichment plant have real time monitoring of air emissions?

Monitors that will feed the info into a computer on a continuous basis, and not just be checked from time to time.

Will there be any state involvement in the monitoring or does LES get to monitor itself?

What kind of filters will be on the ventilation systems?

Will there be any storage of nuclear materials from other countries at les?

Will there be any nuclear waste reprocessing for nuclear fuel or plutonium for weapons at the Les site?

Will the monitors used be able to pick up plutonium emissions?

I would also like to ask the NRC to release the emergency plan for LES to the public. What is the emergency plan for LES? In case of radioactive material release into air by catastrophic accident, weather, or terrorist attack, how would every single person be notified? That could be north of the plant. In Eunice or Hobbs.

Where will they go in case of emergency, or as I understand the correct NRC term unexpected events?

Its not an emergency plan, if its kept secret

If there is no plan in effect and something bad happens, then the taxpayers will pick up the bill.
