Comments:

This is to inform Region I that Testing Technologies Inc. has taken possession of all Radioactive Material. This included 4- Iridium 192 sources and 1-Co-60 source. All required paperwork was also released to TTI. This included leak tests, decay charts, maintenance records, calibrations for personnel dosimetry. I was provided an amended license by the TTI representative prior to releasing materials.

Upon removal of radioactive material I surveyed the area and no residual signs of radiation were present.

Thank you again for your assistance.

Julio C. Venegas
