Point Beach Nuclear Plant U1R28 Refueling Outage

Safety Topics for week of May 2 – 8, 2004 Theme for the week Theme for the week This week's theme is Hand Protection. During the last week of April, there were a lot of minor hand injuries reported. Although we have come a long way in the last few years, we still have not eliminated hand injuries. It is time we hand protection to the next level. Daily Safety Snippets Sunday "It's difficult to grip when your finger gets snipped"

Could you imagine doing your job without your hands? We tend to take it too much for granted that we have two hands at our command, immediately ready to do what we want them to. They not only perform amazing manual tasks, but they also make us money. Just ask anyone who has lost the use of his or her hands.

Monday

"Concerning fingers, do not ignore; Cut one off and you'll grow no more"

Limmerk 1999, While lowering a 2000lb. flow diffuser from the high pressure turbine, a worker lost a substantial portion of one finger when the cribbing and jack used to support the diffuser failed and pinned the worker's hand between the diffuser and an I-beam used as part of the cribbing.

Tuesday

"Safety gloves worn is a hand not torn"

OE12632 Davis Besse, While performing a search, a security officer ran his hand between the front and back seat of a vehicle. A utility knife with the blade partially open cut the leather outer covering of the search glove, but the Kevlar liner gloves the officer had on protected his hand and prevented a serious injury.

Wednesday

"Where danger lingers, watch your fingers"

Workers need to know accidents can happen in the strangest ways. Some accidents are simply bizarre. Others happen when no hazard is apparent. Doors were the source of more than 10,000 hand injuries a year in the US. Vending machines caused more than 100 lost-day hand injuries. And 52 workers injured their hands while walking, according to the statistics.

<u>Thursday</u>

"Practice safety until it fits like a glove"

Do you consider gloves as much a part of your normal PPE as your hardhat, safety glasses, and hearing protection? If not, maybe you should be. Always carry a pair of gloves with you when in the plant and use them when operating the valve or picking up scrap metal.

Friday

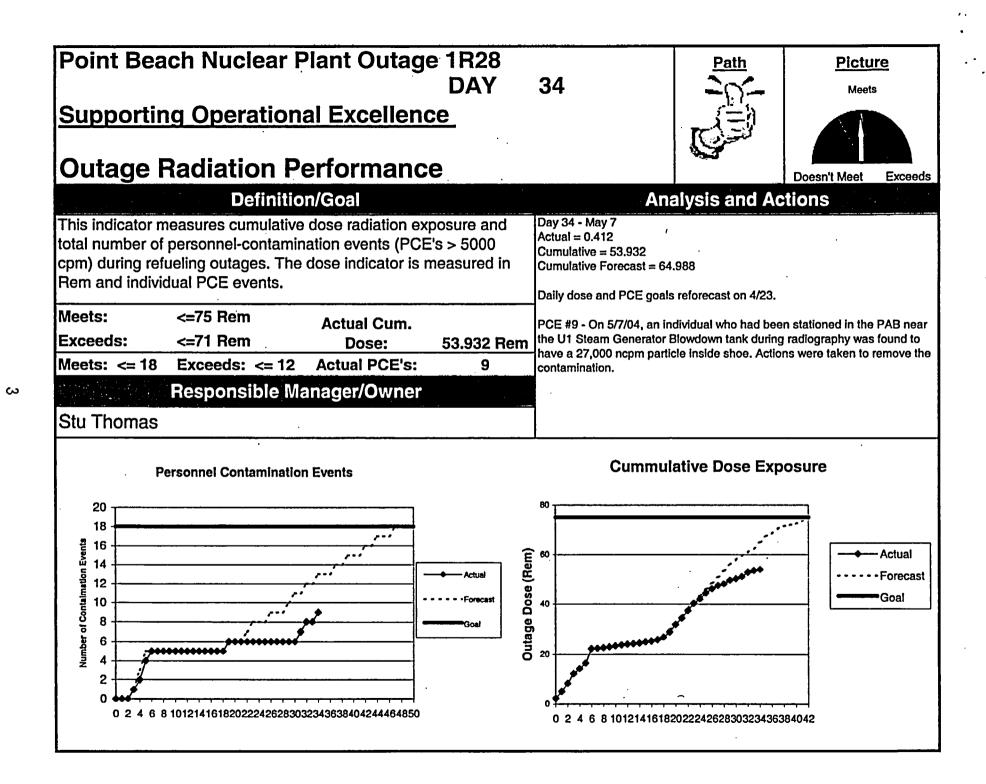

"A finger tip - don't leave work without them!"

On April 4, 2001, a contract employee at Braldwood Station suffered a fractured right hand when an electric hoist disengaged from a crane hook and fell on to the new fuel storage rack. The electric hoist was being used to drag test new spent fuel racks being installed at the station. Workers attached a load cell and the electric hoist to the auxiliary hoist of the fuel building overhead crane, and then connected the electric hoist to a test gage. As the crane operator lowered the auxiliary hook, the test gage hung up on the fuel rack and caused the rigging to move laterally. The electric hoist became disengaged because the safety latch on the auxiliary hook was not used.

<u>Saturday</u>

"It's no hand jive... Proper gloves protect all five"

OSHA 1910.138(a): General requirements. Employers shall select and require employees to use appropriate hand protection when employees' hands are exposed to hazards such as those from skin absorption of harmful substances; severe cuts or lacerations; severe abrasions; punctures; chemical burns; thermal burns; and harmful temperature extremes.
