Point Beach Nuclear Plant U1R28 Refueling Outage

Safety Topic for week of May 9-15

Theme for the week

This week's theme covers <u>Emergency Situations</u>. Be it weather, fire or a medical emergency, are we ready to respond to those unexpected situations?

Daily Safety Snippets

Sunday

"You would be shocked if you found your emergency egress path blocked"

Material is beginning to come out of containment as a lot of work is wrapping up. Don't pile up tools and equipment in the walkway even for short periods of time. Always keep the egress paths open for use.

Monday

"If strong winds start to blow, do you know where to go?"

Do you know the proper location to go in the event of a tornado warning if you are in the trailers, turbine hall or PAB? NP1.9.21 covers the site's various shelter areas. Plan ahead and take the time now to review the NP with your group.

Tuesday

"Make sure to cleanup or a fire may start during heat up.

OE15310 Indian Point 3 – An oil vapor extractor for the main boiler feed pump failed. The tag out used to repair the extractor resulted in an increased leakage of oil from the pump bearings onto lagging. A special log was created to monitor the leakage, but no plan existed for dealing with the safety hazards.

Maintenance repaired the extractor, returning it to service. The next day a portion of oil soaked lagging on a main boiler feed pump caught fire and was quickly extinguished by an alert watchstander.

Wednesday

"Take heed - Don't block emergency equipment you may need."

Last week on the 66ft of containment, the NRC noticed we blocked access to 2 fire extinguishers mounted on the stairwell handrail. A scaffold was built in the area that made access questionable. We then added a number of bags of insulation it made access impossible. Just a question – Why is the NRC finding this instead of us?

Thursday

"What number do you call if your co-worker takes a serious fall?"

What is the plant's emergency number? 2911. This number is only to be used for emergency situations. Two weeks ago a work group was having trouble getting through to operations to communicate a change in equipment status. Rather than waiting, the individual involved decided to contact the control room via the emergency number. Needless to say this was not an appropriate use of 2911.

Friday

"Make sure your fire watch is alert to keep someone from getting hurt"

OE12607 – LaSalle – A worker using an acetylene torch for cutting through a structural member that was behind a metal wall panel. Wall insulation behind the member began to burn. The alert fire watch extinguished the fire within one minute of it beginning and no significant damage occurred.

Saturday

"Debris buildup may result in an unplanned heat up"

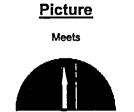

OE14899 River Bend Station – A small fire occurred under the exhaust piping on a diesel generator during testing. The fire was observed during routine checks of the generator and the control room was immediately notified. The control room unloaded the generator while the operator extinguished the fire. The cause was insulation debris that accumulated around the hot piping over time.

Point Beach Nuclear Plant Outage 1R28 DAY

Supporting Operational Excellence

Outage Radiation Performance

Doesn't Meet Exceeds

Definition/Goal

This indicator measures cumulative dose radiation exposure and total number of personnel-contamination events (PCE's > 5000 cpm) during refueling outages. The dose indicator is measured in Rem and individual PCE events.

Meets:

<=75 Rem

Actual Cum.

Exceeds:

<=71 Rem

Exceeds: <= 12

Dose:
Actual PCE's:

0

54.723 Rem

Responsible Manager/Owner

Stu Thomas

Meets: <= 18

Analysis and Actions

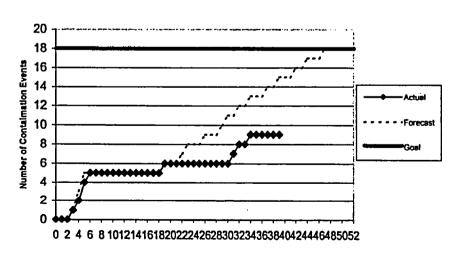

Day 39 - May 12
Actual = 0.275
Cumulative = 54.723
Cumulative Forecast = 54.817

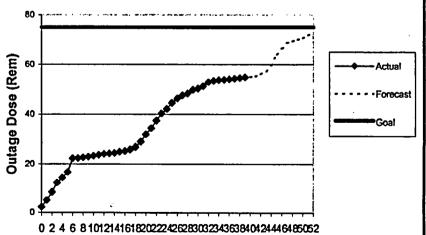

39

Daily PCE goal reforecast on 4/23. Daily dose reforecast on 5/8/04.

Reactor Head Repair Dose for May 12th is 1.959 vs. goal of 1.801. RV Head Total Dose is 8.172.

Personnel Contamination Events Cummulative Dose Exposure

COMMENTS:

RCS Time to Boil is 30 hours. Using NP 10.3.6 Time To Boil curves. Fire Protection Condition IV: Credit is taken for fire rounds as fire prevention contingency
