a.	The operating test conforms with the previously approved outline; changes are consistent with sampling requirements (e.g., 10 CFR 55.45, operational importance, safety function distribution).	Q	AR	n SD
b.	There is no day-to-day repetition between this and other operating tests to be administered during this examination.	Q	n	n SD
c.	The operating test shall not duplicate items from the applicants' audit test(s)(see Section D.1.a).	Q	or	SD
d.	Overlap with the written examination and between different parts of the operating test is within acceptable limits.	Q	n	SD
e.	It appears that the operating test will differentiate between competent and less-than-competent applicants at the designated license level.	Q	n	n SD
2. Walk-Through Criteria		-	-	-
a.	Each JPM includes the following, as applicable: <ul style="list-style-type: none"> • initial conditions • initiating cues • references and tools, including associated procedures • reasonable and validated time limits (average time allowed for completion) and specific designation if deemed to be time critical by the facility licensee • operationally important specific performance criteria that include: <ul style="list-style-type: none"> - detailed expected actions with exact criteria and nomenclature - system response and other examiner cues - statements describing important observations to be made by the applicant - criteria for successful completion of the task - identification of critical steps and their associated performance standards - restrictions on the sequence of steps, if applicable 	Q	AR	n SD
b.	Ensure that any changes from the previously approved systems and administrative walk-through outlines (Form ES-301-1 and 2) have not caused the test to deviate from any of the acceptance criteria (e.g., item distribution bank use, repetition from the last 2 NRC examinations) specified on those forms and Form ES-201-2. 3. Simulator Criteria		-	-	-
The associated simulator operating tests (scenario sets) have been reviewed in accordance with Form ES-301-4 and a copy is attached.		Q	n	n SD

QUALITATIVE ATTRIBUTES	Initials					
	a	b*	c#			
1. The initial conditions are realistic, in that some equipment and/or instrumentation may be out of service, but it does not cue the operators into expected events.	Q	AR	7 SD			
2. The scenarios consist mostly of related events.	Q	AR	7 SD			
3. Each event description consists of <ul style="list-style-type: none"> the point in the scenario when it is to be initiated the malfunction(s) that are entered to initiate the event the symptoms/cues that will be visible to the crew the expected operator actions (by shift position) the event termination point (if applicable) 	Q	AR	7 SD			
4. No more than one non-mechanistic failure (e.g., pipe break) is incorporated into the scenario without a credible preceding incident such as a seismic event.	Q	AR	7 SD			
5. The events are valid with regard to physics and thermodynamics.	Q	AR	7 SD			
6. Sequencing and timing of events is reasonable, and allows the examination team to obtain complete evaluation results commensurate with the scenario objectives.	Q	AR	7 SD			
7. If time compression techniques are used, the scenario summary clearly so indicates. Operators have sufficient time to carry out expected activities without undue time constraints. Cues are given.	Q	AR	7 SD			
8. The simulator modeling is not altered.	Q	AR	7 SD			
9. The scenarios have been validated. Pursuant to 10 CFR 55.46(d), any open simulator performance deficiencies have been evaluated to ensure that functional fidelity is maintained while running the planned scenarios.	Q	AR	7 SD			
10. Every operator will be evaluated using at least one new or significantly modified scenario. All other scenarios have been altered in accordance with Section D.5 of ES-301.	Q	AR	7 SD			
11. All individual operator competencies can be evaluated, as verified using Form ES-301-6 (submit the form along with the simulator scenarios).	Q	AR	7 SD			
12. Each applicant will be significantly involved in the minimum number of transients and events specified on Form ES-301-5 (submit the form with the simulator scenarios).	Q	AR	7 SD

ROs must serve in both the "at-the-controls (ATC)" and "balance-of-plant (BOP)" positions; Instant SROs must do one scenario, including at least two instrument or component (I/C) malfunctions and one major transient, in the ATC position.
2. Reactivity manipulations may be conducted under normal or *controlled* abnormal conditions (refer to Section D.5.d) but must be significant per Section C.2.a of Appendix D. * Reactivity and normal evolutions may be replaced with additional instrument or component malfunctions on a 1-for-1 basis.
3. Whenever practical, both instrument and component malfunctions should be included; only those that require verifiable actions that provide insight to the applicant's competence count toward the minimum requirement.
