Chris

I need a pad and fence description which is factual and complete. Include a diagram showing the placement of the pad, fence, the OSSC, the gate and any other significant features.

Also, provide the Micro-shield data and assumptions. This should include the contact dose rate, and the dose rate expected at the perimeter fence. I would expect it to be less than 10 CFR Part 20 Subpart D--Radiation Dose Limits for Individual Members of the Public, 20.1301 Dose limits for individual members of the public.

You indicate that you are considering removing the provision for checking for accumulation of moisture in the Dufrane. Is this in accordance with the manufacturer's recommendation? One observation of an empty container may not be adequate to deviate from recommended manufacturer procedures and guidelines. I would suggest you get concurrence from not doing this check from the manufacture or other experts in the field at your site.

I will be in DC next week, however, I have asked Dr Lee, CHP, to look over the microshield data. Please send a copy to both him and me. Our fax is 630 515 1259. If it is available electronically you can e-mail us both. Peter is P JL2@nrc.gov. I will be checking my e-mail during the week and if time permits will continue to work on your EA.

Thanks

Mike

Hello Mike,

The folks I need to talk with at the Reactor facility on working four 10's, so, they're off today. I will get you the information you've requested early next week.

Have a nice weekend.

R/
