Rick,

I have one more follow-up:

RAI SRXB-A-11

We understand that VY is not changing the CLB for new and spent fuel storage for EPU condition. **But, our question was that did they perform any analysis to find out the impact of new and spent fuels that are used for EPU core, and make sure that their conclusion was correct.** The analysis should include affects of enrichment levels in new fuels, and potential increase of some elements/isotopes (such as Pu) in spent fuels, etc.

Muhammad

Entergy issued Supplement 30 to the Vermont Yankee EPU late last night. This supplement provides the response to most of the questions provided in our most recent set of RAIs. The remaining portion is expected by 8/4/05.

Supplement 30 includes 13 attachments. The cover letter includes a table which shows which RAI questions are addressed in each attachment. Attached is the cover letter (pdf file) and Attachments 1, 3, 4, 5, 7, 8, 9. The attachments are in MS Word format. The missing attachments are mostly non-proprietary versions of some of the proprietary attachments and affidavits for the proprietary attachments.

I'll provide a hard copy of the complete package to each reviewer who has outstanding RAI questions as soon as I get my hard copy from the licensee.

**As you review the RAI responses, please let me know ASAP if any of the questions have not been adequately addressed since that may impact the review schedule.**

thanks,

Rick
