Subject: Expansion of Grand Gulf Nuclear Plant

Dear Sir /Madam, As a former full time resident and current part- time resident of Tensas Parish LA, I was distressed to hear about possible expansion of the nuclear power plant at Grand Gulf MS.This is a mistake. When deciding to move our family from Tensas, the existence of the current plant was a major factor in our decision. Is the nuclear waste being stored at the plant? Do we have a plan about what to do with this waste? If a spill occurred what about the millions of people using the water of the Mississippi for drinking, transportation, farming, fisheries . Why is there no ferry from Port Gibson to St. Joseph for evacuation or emergency purposes? I think the lack of foresite in all of these instances argues against expansion. Let's try to do something different and responsible for a change. How about all that energy flowing past day and night right in front of the plant? Could we get some of that without damming the river?

don't expand, Thanks

Tom Lutken
