

R

At 07:00 today 3/22/95 I received a call from Jerry Roth (301-415-7257) regarding a Russian visit to Combustion Engineering (CE) Hematite. He relayed the following information:

HQ would like the Region to arrange and participate in a safety inspection at CE on July 24-27, 1995. A Russian team of 5 individuals wants to visit CE and observe how we do an inspection. There will be at least one HQ persons with the 5 Russians. The Russians are in HQ this week arranging this trip and Jerry would like feedback from the region today if possible.

I asked John Jacobson to call CE and see if they will be able to support this effort. He will wait for further guidance from Region III management before he calls CE.

The HQ plans are for the Russians to visit Region III on Monday July 24 and; travel to CE on Tuesday and leave for HQ on Thursday night.

This is all the information I have at this time.
