 2. Letter from Cornelius J. Gannon to the U. S. Nuclear Regulatory Commission (Serial: BSEP 04-0015), "Supplement to Request for License Amendments - Core Flow Operating Range Expansion," dated March 5, 2004 (ML040770048)

Ladies and Gentlemen:

On November 12, 2002, Carolina Power & Light Company, now doing business as Progress Energy Carolinas, Inc. (PEC), requested a revision to the Technical Specifications (TSs) for the Brunswick Steam Electric Plant (BSEP), Units 1 and 2. The proposed license amendments revise TSs, as necessary, to support an expansion of the core flow operating range (i.e., Maximum Extended Load Line Limit Analysis Plus (MELLLA+)). The request was supplemented on March 5, 2004. The basis for the request was prepared following the guidelines contained in General Electric (GE) Nuclear Energy Report NEDC-33006P, "Maximum Extended Load Line Limit Analysis Plus Licensing Topical Report," Revision 1, dated August 2002.

As part of MELLLA+ implementation for BSEP, PEC also planned to implement the Detect and Suppress Solution - Confirmation Density (DSS-CD) approach to automatically detect and suppress neutronic/thermal-hydraulic instabilities. GE Nuclear Energy Report NEDC-33075P, "Detect and Suppress Solution - Confirmation Density Licensing Topical

Report," Revision 3, dated January 2004. The March 5, 2004, supplement updated the requested amendments to reflect changes made in NEDC-33075P, Revision 3.

Based upon conversations between the NRC, PEC, and GE, it is apparent that a significant amount of effort is required to resolve NRC questions associated with the methodologies used to support the MELLLA+ Licensing Topical Report (LTR) (i.e., NEDC-33006P). Therefore, PEC is withdrawing the referenced license amendment request with plans to resubmit at a later date.

Carolina Power & Light Company, now doing business as Progress Energy Carolinas, Inc., requests that BSEP continue to be considered the lead plant for MELLLA+ implementation. To that end, the re-submittal of the MELLLA+/DSS-CD amendment request will be made as soon as practical, once NRC concerns are resolved. Once sufficient progress is made regarding the MELLLA+ LTR, PEC will contact the NRC Project Manager for BSEP to establish a re-submittal schedule, consistent with the new process for coordinating reviews of topical reports and related plant-specific licensing actions which was provided to the industry on May 26, 2005.

A significant amount of NRC review has been completed on the BSEP plant-specific amendment request. In an effort to facilitate review of the resubmitted request, PEC will identify areas of the re-submittal that are essentially unchanged as a result of resolution NRC comments regarding the MELLLA+ LTR.

Please refer any questions regarding this submittal to Mr. Leonard R. Beller, Supervisor - Licensing/Regulatory Programs, at (910) 457-2073.

Sincerely,

Edward T. O'Neil
Manager - Support Services
Brunswick Steam Electric Plant
