Ð

#### Westinghouse Non-Proprietary Class 3 Westinghouse/AMAG Organization & Responsibilities

- Advanced Measurement & Analysis Group, Inc. (AMAG)
  - Armando Lopez, President
    - Vahid Askari, Vice President
- Westinghouse Electric Company, LLC (Westinghouse)
  - John McInerney, Director, Safety & Monitoring Systems
  - Chris Savage, Director, Systems & Safety Analysis
    - Bill Turkowski, Manager, Plant Systems
      - Chip French, Fellow Engineer
    - Jim Gresham, Manager, Regulatory Compliance & Plant Licensing
      - Chuck Molnar, Senior Engineer

## **Meeting Objectives**

- Address Reactor Systems Branch questions to facilitate review and approval of pending plant-specific license amendment requests (LARs)
- Develop a plan and schedule to complete plant-specific LAR review
- Discuss guidance to achieve acceptable plant-specific implementation
- Concur on CROSSFLOW X-Beam topical report review activities
- Update the NRC on the status of CROSSFLOW Generic Action Plan (GAP) initiatives

## **CROSSFLOW** Implementation and Operation

- **Regulatory basis** •
  - CENPD-397-P-A, Rev. 1 is the licensing basis for CROSSFLOW application including installation and operation
- Establish plant baseline ۲
  - Installation procedures provide rigorous approach for establishing installation baseline
- System operation alarms and diagnostics •
  - Continuous monitoring of system performance
  - System is designed to recognize unacceptable performance and alert users through system alarms
- Periodic surveillance and maintenance ٠
  - Provided in vendor documentation and summarized in Westinghouse -Owners Group (WOG) CROSSFLOW Task Force (CTF) User Guidelines
- Operating experience
  - CROSSFLOW performance is consistent with the design and licensing basis

## **CROSSFLOW System Overview**

- CROSSFLOW ultrasonic flow measurement is based on crosscorrelation technology; which differs in principle and application from transit-time technology
- Provides an independent feedwater flow measurement
  - Does not replace existing plant instrumentation
  - Used in conjunction with other plant instrumentation
- 40 CROSSFLOW systems for feedwater flow measurement are in operation globally by 20 utilities
  - MUR Appendix K power uprate installations (11 licensed in the USA)
  - Venturi power recovery installations (6 in the USA)
  - Over 100 plant-years of service experience

# **Regulatory Update**

•

11

,

...

- NRC Agenda Topics
  - Explanation of adequacy of existing technical basis for CROSSFLOW
  - Division of technology responsibilities
  - Responsibility for draft questions pertaining to flow profile

- Explanation of adequacy of existing technical basis for CROSSFLOW
  - NRC-approved topical report; CENPD-397-P-A, Rev. 1
    - The topical report and NRC Safety Evaluation (SE) form the basis by which licensees implement requests for Appendix K MUR power uprate license amendments.
  - Numerous technical discussions and meetings with the NRC staff
  - Letters and reports from the WOG and Westinghouse to address questions

## **Regulatory Update**

Division of responsibilities ۲ a, c Division of responsibility for CROSSFLOW is consistent with standard industry ----practice for other plant equipment

...

# Evaluation and Implementation of WOG CROSSFLOW User Guidelines

• NRC Agenda Topics

. .

- Discussion of guidelines
- Effect of guidelines on topical report CENPD-397-P-A, Rev. 1
- Applicability of guidelines to already approved MUR power uprates
- Applicability of guidelines to current and future MUR power uprates
- Division of vendor/licensee implementation responsibilities

- Discussion of guidelines
  - Purpose:
    - Develop WOG CTF User Guidelines to help ensure CROSSFLOW system is consistently operated as designed and licensed.
    - A reference for CROSSFLOW users to help implement plant-specific programs by compiling CROSSFLOW documentation and experience
    - Does not replace vendor documentation
  - Status: Complete
    - Information copy provided to NRC
    - The Guidelines provide information that covers the following areas:
      - Theory and Overview of the CROSSFLOW Technology
      - Use and Application
      - Operation Management
        - » Periodic maintenance, surveillance and training
      - Operating Experience

- Effect of guidelines on Topical Report CENPD-397-P
  - User guidelines do not affect the Topical Report

a, c

• Applicability of guidelines to already approved MUR power uprates

- Applicability of guidelines to current and future MUR power uprates
  - Same as above

a, c

.

### Westinghouse/AMAG Technology Advancements

## **X-Beam Topical Report Review**

## Discussion

.

.

# **Summarize Commitments and Schedule**

# **Summary**

• Regulatory basis

\*\* 3

- CENPD-397-P-A, Rev. 1 is the licensing basis for CROSSFLOW application including installation and operation
- Establish plant baseline
  - Installation procedures provide rigorous approach for establishing installation baseline
- System operation alarms and diagnostics
  - Continuous monitoring of system performance
  - System is designed to recognize unacceptable performance and alert users through system alarms
- Periodic surveillance and maintenance
  - Provided in vendor documentation and summarized in WOG CTF User Guidelines
- Operating experience
  - CROSSFLOW performance is consistent with the design and licensing basis

#### **Schedule / Next Actions**

- Plant-specific LARs for Fort Calhoun and Calvert Cliffs are consistent with the approved CROSSFLOW base topical/SER.
- Next actions

- Identify any LAR-specific issues delaying approval
  - Reactor Systems Branch reviewer(s) meeting for in-depth CROSSFLOW technology discussions with Westinghouse/AMAG
  - Define the vendor/utility responsibilities to resolve the Reactor System Branch questions.
- Establish a schedule for issuance of Fort Calhoun and Calvert Cliffs LARs

# Appendix

19 2

.

# **CROSSFLOW Status Update**

- CROSSFLOW Topical Reports
  - CENPD-397-P-A, Rev. 1, "Improved Flow Measurement Accuracy Using CROSSFLOW Ultrasonic Flow Measurement Technology", May 2000
    - This is the licensing basis document for CROSSFLOW technology.
  - WCAP-15689-P, Rev. 1, "Evaluation of Transit-Time and Cross-Correlation Ultrasonic Flow Measurement Experience with Nuclear Plant Feedwater Flow Measurement", September 2002
    - Submitted to provide information relative to Caldon Report ER-262, "Effects of Velocity Profile Changes Measured In-Plant on Feedwater Flow Measurement Systems ".
  - WCAP-16163-P, Rev. 0, "CROSSFLOW Ultrasonic Flow Measurement System, X-Beam Modification", February 2005
    - Currently under NRC review.

# **CROSSFLOW Status Update**

- Recent CROSSFLOW Vendor Communications
  - Signal Interference
    - TB-03-6, "CROSSFLOW Ultrasonic Flow Measurement System Signal Issues", September 5, 2003.
    - NSAL-03-12, "CROSSFLOW Ultrasonic Flow Measurement System Flow Signal Interference Issues", December 5, 2003.
  - Configuration/Alignment Sensitivity Observations
    - TB-04-4, "Information Regarding Recent CROSSFLOW Ultrasonic Flow Measurement System Performance Observations", February 12, 2004

:
