Re: CD which accompanied hard copy of 3/9/04 letter:

I had the UCS disc checked by DRMA for any problems; there are none. There are three files on the disc. One are the composite tables we had already received electronically. One is the Davis-Besse safety culture assessment (we already had hard copy of that document here in RI). The other file appears to be primarily color-coded charted versions of the composites. I can try to run it off on the color printer if you want.
