Subject: Fwd: Wellfield Release -Docket 40-8964

Paul and Steve,

The following release notification was sent out on Saturday. However, I sent it from an offsite computer and my memory failed me and I had your email addresses wrong so it did not get delivered. Let me know if you have any questions.

Thanks,
Ken

Steve and Paul,

Please consider this formal notification that PRI had a reportable release of production fluid at the Smith Ranch-Highland Uranium Project Mine Unit-2. The release was discovered during the early morning of September 3 and is approximated at 9,000 gallons. The uranium concentration of the production fluid is estimated at 40 mg/L. The release occurred in Mine Unit-2 at Production Well 2P182 and was the result of a cracked 1.5-inch pvc union on the wellhead. None of the released fluid reached waters of the state.

A written report will follow within 7 days. Let me know if you have any questions.

Ken Milmine
Manager- Health, Safety and Environmental Affairs
