Subject: Wellfield Release - Docket 40-8964

Steve and Paul,

Please consider this formal notification that PRI had a reportable release of production fluid at well FP-435 at the Smith Ranch-Highland Uranium Project. The release occurred when a union on a 1.5-inch schedule 80 PVC line failed. The volume of released production fluid was approximately 1000 gallons with a uranium concentration of 15.4 mg/L. The released fluid flowed approximately 458 feet in the borrow ditch of the wellfield access road before it soaked into the ground. No fluid was recovered and none of the released fluid entered waters of the state. Please let me know if you have any questions.

A written report will be submitted within 7 days.

Sincerely,

Ken Milmine
Manager- Health, Safety and Environmental Affairs
