Table D4-3.	The Chemical Composition for T2D30EDS2	04-13

This appendix lists the ESEM/SEM/EDS results for the fiberglass samples within a birdcage submerged in the test solution. The purpose of this analysis was to determine the degree and the extent of particulate debris attached to the fiberglass. The fiberglass samples were extracted from the birdcage on March 7, 2005, the date Test 2 was shut down. Both exterior and interior fiberglass samples were examined. Microprobe SEM was used to examine the fiberglass samples after they were air dried and coated with Au/Pd. In addition to microprobe SEM, environmental SEM (ESEM) was employed to analyze the wet fiberglass samples without any coating and under a low-vacuum condition (i.e., 80 Pa) to minimize the potential for modification of the fiberglass samples that might occur through the drying process. Microprobe SEM/EDS and ESEM results of the Test-2 Day-30 birdcage fiberglass samples were obtained on March 9, 2005.

Transcribed Laboratory Log

Microprobe laboratory session from March 9, 2005

T2D30 Samples—NRC

Conditions: 15-kV, 1-nA beam current, Aperture = 2

Note: bold spots in sketch denote carbon glue used to secure samples.
