Seabrook Station
10CFR Part 71 Quality Assurance Program

FPL Energy Seabrook, LLC (FPL Energy Seabrook) hereby provides information requested by the NRC Staff regarding the Seabrook Station Quality Assurance Program for Radioactive Material Packages, License No. 0835, Revision 1. FPL Energy Seabrook notified the NRC on September 23, 2005, that it intends to renew the Quality Assurance Program Approval.

The Seabrook Station Operational Quality Assurance Program meets the requirements of 10CFR50, Appendix B, as described in Section 17.2 of the Seabrook Station Updated Final Safety Analysis Report, and has been established, maintained and executed with regard to transportation packages. The Operational Quality Assurance Program was in effect prior to the transfer of the Operating License from North Atlantic Energy Service Corporation to FPL Energy Seabrook, LLC, and has not been changed materially since that time. In addition, the implementing procedures related to the packaging and shipping of radioactive materials have not changed materially since the license transfer and the Radiation Protection Department composition and staffing has not experienced any significant changes. In essence, the Seabrook Station Radiation Protection organization and the programs and procedures related to the packing and shipping of radioactive material have not changed materially since the transfer of the Operating License. The administrative error that resulted in the Quality Assurance Program not being transferred to FPL Energy Seabrook, LLC, has not affected the implementation of the program.
