Howdy Steve, I was not sure what you meant by regulatory requirements vs a guideline, but in your scenario you provide, yes - I think we would change the classification of that aquifer from a Class 3 to a Class 1 due to its use as a domestic supply.
Holler if anything else comes up....
Mark

Mark:

As you know, Pathfinder applied for a license amendment to remove the two offsite wells (AL-8 and AL-9) from the current monitoring network at their Lucky Mc site. We are reviewing this request. To help with our review, I had a question regarding WDEQ's regulation of aquifer class of use.

I wanted to confirm that WDEQ's aquifer class of use categories are solely guidelines not regulatory requirements. Therefore, if someone decides to install a drinking water well in a Class III aquifer, that aquifer is then considered a Class I aquifer. Please, at your earliest convenience, confirm my understanding, as this point is an important factor in my analysis.

Thank you for your help.

Steve
