DATE: June 27, 2005

SUBJECT: STATUS ON 3M COMPANY CESIUM 137 SURVEY TO BE CONDUCTED AT
THE TWIN CITIES ARMY AMMUNITION PLANT (TCAAP), ARDEN HILLS, MN

Region III staff contacted Mr. Entwisle to determine when 3M plans on initiating surveys at TCAAP, and when the NRC can expect to receive the final survey plan for the project.

Mr. Entwisle indicated that he and his staff have been doing additional surveys and sampling at TCAAP to see if they can find the area identified by the NRC as possibly having dispersable cesium 137 contamination (i.e., not microspheres). Mr. Entwisle indicated that they are finishing analysis of the soils samples. So far they have not identified any dispersable contamination. He further indicated that they plan on performing direct surface surveys in August 2005. He further indicated that the technical basis and revised survey plan will be sent to us for review prior to the conduct of the survey.

Mr. Entwisle also indicated he would e-mail the Region a status summary.

Nothing further was discussed.
