

January 18, 2006

Alan G. Wilson, Garrison Manager
Office of the Garrison Manager
Department of the Army
1 Rock Island Arsenal
Rock Island, IL 61299-5000

SUBJECT: REQUEST FOR ADDITIONAL INFORMATION TO SUPPORT NRC'S
EVALUATION OF THE PROPOSED FIELD SAMPLING PLAN FOR
JEFFERSON PROVING GROUND (LICENSE SUB-1435)

Dear Mr. Wilson:

The U.S. Nuclear Regulatory Commission (NRC) staff is continuing its evaluation of the Army's proposed Field Sampling Plan (FSP) for Jefferson Proving Ground. To support the evaluation of the FSP, the staff hereby requests additional information on three issues (enclosed). We would appreciate your response within 30 days of the receipt of this letter.

If you have any questions, I can be reached at (301) 415-5869.

Sincerely

/RA/

Tom McLaughlin, Project Manager
Materials Decommissioning Branch
Division of Waste Management and
Environmental Protection
Office of Nuclear Material Safety
and Safeguards

License No.: SUB-1435
Docket No.: 040-08838

Enclosure: Request for Additional Information

cc: JPG Distribution List

REQUEST FOR ADDITIONAL INFORMATION TO SUPPORT NRC'S EVALUATION OF THE PROPOSED FIELD SAMPLING PLAN FOR JEFFERSON PROVING GROUND

QUESTION 1:

The Army should provide additional information on its rationale for postponing the installation of stream and cave gauging stations and measurement of stream and cave flows until the new monitoring wells are operable. The Army also should clarify its phased approach for collecting stream and cave flow data based upon the interrelationships of stream flow, cave flow, and groundwater flow. This should include a discussion on how it will decide if low flow or base flow stream and cave values should be collected and on how it will perform these measurements during the phased stream and cave monitoring program if these items are determined to be needed. The Army should also provide additional information on its rationale for postponing the gathering of climatic data and why it is not installing an automated climatic station.

BASIS:

Information on the interrelationships of precipitation, recharge to the groundwater, stream flow, cave flow, and groundwater flow is critical to measuring and understanding the fate and potential transport of depleted uranium at Jefferson Proving Ground (JPG). It is important to gather precipitation, stream flow, cave flow, and groundwater flow data over different flow and climatic conditions.

QUESTION 2:

The Army should provide additional information to justify why a phased approach for determining the hydraulic properties (hydraulic conductivity and storage parameters) of the water-bearing units (both the unconsolidated and limestone units), utilizing aquifer pump test procedures and other approaches, should not be performed at JPG.

BASIS:

The hydraulic properties of the water-bearing units are needed to understand the rate of groundwater flow and storage of groundwater. Both are important factors that impact the fate and potential transport of the depleted uranium at JPG. A phased approach for obtaining the hydraulic properties of the water-bearing units permits the Army to determine these parameters and to evaluate whether additional data should be obtained.

QUESTION 3 :

The Army should provide additional information on its approach or approaches for measuring, calculating, or estimating recharge to each water-bearing unit. The Army should also discuss the parameters that it will use to determine recharge to each water-bearing unit.

BASIS:

The measurement of recharge to each water-bearing unit and the movement of this water through the soils and the unsaturated zone provide important information on the fate and potential transport of the depleted uranium at JPG.
