**RE: Final NRC Inspection and Release
Westinghouse Bloomfield Lamp Plant Property
License #SMB-1527**

Dear Mark:

As you know from our recent discussions, we are proceeding with the removal of asbestos-containing materials (ACM) from the only two buildings remaining (Buildings 7 and 8) at our former Bloomfield Lamp Plant site. ACM removal activities have already been completed in Building 8 and work in Building 7 is anticipated to be completed by the end of June. It is Westinghouse's objective to complete the demolition of these two remaining buildings before the end of 1997. However, before this demolition may proceed, we understand we must obtain the required NRC clearances for the radiological remediation completed in these buildings. The final Radiological Survey Report was issued to the NRC in July 1996, as required in anticipation of the oversight inspection. This inspection is presumably to be done for the NRC by ORISE. We are requesting that you work with us to schedule this inspection as early in July as possible.

Our being able to proceed with the demolition of Building 7 also requires that we resolve any questions the NRC may have relative to the Dose Assessment Report which was previously submitted (April 9, 1996) to the NRC for the limited amount of radioactive material remaining in a trench and in the basement of this building. We would like to address any such questions as soon as possible.

Mr. Mark Roberts
