MFN 06-003

Docket No. 52-010

January 9, 2006

U.S. Nuclear Regulatory Commission
Document Control Desk
Washington, D.C. 20555-0001

**Subject: Additional Information Regarding PCCS, ICS, GDCS, SRV and
DPV Design Details**

In the Referenced letters, GE provided the ESBWR MAAP parameter file and other associated design details and drawings for the NRC's use as guidance in building their MELCOR model. Subsequently, the NRC requested additional design details to complete the TRACE input deck for the ESBWR. This additional information is contained in Enclosure 1

Enclosure 1 contains GE proprietary information as defined by 10 CFR 2.390. GE customarily maintains this information in confidence and withholds it from public disclosure.

The affidavit contained in Enclosure 3 identifies that the information contained in Enclosure 1 has been handled and classified as proprietary to GE. GE hereby requests that the information of Enclosure 1 be withheld from public disclosure in accordance with the provisions of 10 CFR 2.390 and 9.17. A non-proprietary version is contained in Enclosure 2.

If you have any questions about the information provided here, please let me know.

D068

Sincerely,

David H. Hinds
Manager, ESBWR

MFN 06-003
Enclosure 2

ENCLOSURE 2

MFN 06-003

PCCS, ICS, GDCS, SRV and DPV Design Details

Passive Containment Cooling System (PCCS)

NRC Request

(1) Number of PCCS condensation tubes for a single unit

GE Response

[[]]

NRC Request

(2) Diameter of PCCS condensation tubes

GE Response

[[]]

NRC Request

(3) Volume and Flow Area of Upper Plenum for the PCCS

GE Response

[[

]]

See Note 1

NRC Request

(4) Volume and Flow Area of the Lower Plenum for the PCCS

GE Response

[[

]]

See Note 1

NRC Request

(5) PCCS Drain Tank Volume

Gravity-Driven Cooling System (GDCS)

NRC Request

(1) Flow area of the connection between the GDCS airspace and the drywell

GE Response

Refer to DCD Figure 3G.1-59 Section A-A,

[[
]]

Refer to attached Figure for obtaining the horizontal length dimension of the open area of the GDCS pool,

For GDCS pool at 90-deg:

[[
]]

For GDCS pool at 180-deg:

[[
]]

For GDCS pool at 270-deg:

[[
]]

[[

Safety Relief Valves (SRVs) and Depressurization Valves (DPVs)

NRC Request

(1) SRV and DPV flow areas

GE Response

[[

]]

NRC Request

(2) Specific sequence of ADS valve opening (Table 6.3-1 in the DCD provided the ECCS-LOCA sequence, which includes the sequence of ADS valve opening. However, it doesn't explain which specific valves open on which steam lines. i.e., which 5 SRVs open at 0 sec, which 5 open at 10 sec, and which DPVs open at 50, 100, 150 and 200 sec? There is 1 DPV for each of the 4 steam lines and 4 DPVs connected directly to the RPV.)

GE Response

ENCLOSURE 3

MFN 06-003

Affidavit

General Electric Company

AFFIDAVIT

I, **George B. Stramback**, state as follows:

- (1) I am Manager, Regulatory Services, General Electric Company ("GE") and have been delegated the function of reviewing the information described in paragraph (2) which is sought to be withheld, and have been authorized to apply for its withholding.
- (2) The information sought to be withheld is contained in GE letter MFN 06-003, David H. Hinds to USNRC, *Additional Information Regarding PCCS, ICS, GDCS, SRV and DPV Design Details*, dated January 9, 2006. The proprietary information in Enclosure 1, *PCCS, ICS, GDCS, SRV and DPV Design Details*, is identified by a dark red font with double underlines inside double square brackets. Figures and large equation objects are identified with double brackets before and after the object. In each case, the superscript notation {3} refers to Paragraph (3) of this affidavit, which provides the basis for the proprietary determination.
- (3) In making this application for withholding of proprietary information of which it is the owner, GE relies upon the exemption from disclosure set forth in the Freedom of Information Act ("FOIA"), 5 USC Sec. 552(b)(4), and the Trade Secrets Act, 18 USC Sec. 1905, and NRC regulations 10 CFR 9.17(a)(4), and 2.790(a)(4) for "trade secrets" (Exemption 4). The material for which exemption from disclosure is here sought also qualify under the narrower definition of "trade secret", within the meanings assigned to those terms for purposes of FOIA Exemption 4 in, respectively, Critical Mass Energy Project v. Nuclear Regulatory Commission, 975F2d871 (DC Cir. 1992), and Public Citizen Health Research Group v. FDA, 704F2d1280 (DC Cir. 1983).
- (4) Some examples of categories of information which fit into the definition of proprietary information are:
 - a. Information that discloses a process, method, or apparatus, including supporting data and analyses, where prevention of its use by General Electric's competitors without license from General Electric constitutes a competitive economic advantage over other companies;
 - b. Information which, if used by a competitor, would reduce his expenditure of resources or improve his competitive position in the design, manufacture, shipment, installation, assurance of quality, or licensing of a similar product;
 - c. Information which reveals aspects of past, present, or future General Electric customer-funded development plans and programs, resulting in potential products to General Electric;

- c. Information which reveals aspects of past, present, or future General Electric customer-funded development plans and programs, resulting in potential products to General Electric;
- d. Information which discloses patentable subject matter for which it may be desirable to obtain patent protection.

The information sought to be withheld is considered to be proprietary for the reasons set forth in paragraphs (4)a., and (4)b, above.

- (5) To address 10 CFR 2.390 (b) (4), the information sought to be withheld is being submitted to NRC in confidence. The information is of a sort customarily held in confidence by GE, and is in fact so held. The information sought to be withheld has, to the best of my knowledge and belief, consistently been held in confidence by GE, no public disclosure has been made, and it is not available in public sources. All disclosures to third parties including any required transmittals to NRC, have been made, or must be made, pursuant to regulatory provisions or proprietary agreements which provide for maintenance of the information in confidence. Its initial designation as proprietary information, and the subsequent steps taken to prevent its unauthorized disclosure, are as set forth in paragraphs (6) and (7) following.
- (6) Initial approval of proprietary treatment of a document is made by the manager of the originating component, the person most likely to be acquainted with the value and sensitivity of the information in relation to industry knowledge. Access to such documents within GE is limited on a "need to know" basis.
- (7) The procedure for approval of external release of such a document typically requires review by the staff manager, project manager, principal scientist or other equivalent authority, by the manager of the cognizant marketing function (or his delegate), and by the Legal Operation, for technical content, competitive effect, and determination of the accuracy of the proprietary designation. Disclosures outside GE are limited to regulatory bodies, customers, and potential customers, and their agents, suppliers, and licensees, and others with a legitimate need for the information, and then only in accordance with appropriate regulatory provisions or proprietary agreements.
- (8) The information identified in paragraph (2), above, is classified as proprietary because it contains the details of the evaluation model supporting the probabilistic analysis that GE developed to estimate the core damage frequency of the ESBWR. This model is based on previous European SBWR information developed over several years at a significant cost to GE.

The development of the evaluation process along with the interpretation and application of the analytical results is derived from the extensive experience database that constitutes a major GE asset.

- (9) Public disclosure of the information sought to be withheld is likely to cause substantial harm to GE's competitive position and foreclose or reduce the availability of profit-making opportunities. The information is part of GE's comprehensive BWR safety and technology base, and its commercial value extends beyond the original development cost. The value of the technology base goes beyond the extensive physical database and analytical methodology and includes development of the expertise to determine and apply the appropriate evaluation process. In addition, the technology base includes the value derived from providing analyses done with NRC-approved methods.

The research, development, engineering, analytical and NRC review costs comprise a substantial investment of time and money by GE.

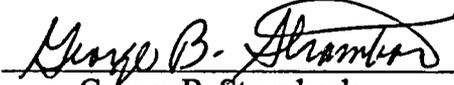

The precise value of the expertise to devise an evaluation process and apply the correct analytical methodology is difficult to quantify, but it clearly is substantial.

GE's competitive advantage will be lost if its competitors are able to use the results of the GE experience to normalize or verify their own process or if they are able to claim an equivalent understanding by demonstrating that they can arrive at the same or similar conclusions.

The value of this information to GE would be lost if the information were disclosed to the public. Making such information available to competitors without their having been required to undertake a similar expenditure of resources would unfairly provide competitors with a windfall, and deprive GE of the opportunity to exercise its competitive advantage to seek an adequate return on its large investment in developing these very valuable analytical tools.

I declare under penalty of perjury that the foregoing affidavit and the matters stated therein are true and correct to the best of my knowledge, information, and belief.

Executed on this 9th day of January 2006

George B. Stramback
General Electric Company
