Subject: White Mesa vanadium release

Jim and Maria -

This email concerns the May 8th letter to IUC/White Mesa regarding disposition of vanadium (see attached email from Louis Carson). This letter appears to allow 0.05 weight percent as a criterion to release vanadium with residual radioactivity offsite. Reference is also made to compliance with applicable requirements of Part 20.

Members of the Clearance Working Group met to discuss this case and offered recommendations to FCSS for moving forward on this case (see attached email from Julie Olivier), but it is not apparent how those recommendations were taken into account in the May 8th letter. It would be helpful to discuss the May 8th letter in view of the Clearance Working Group's recommendations, so that similar licensing cases will be handled consistently with agency disposition practices.

Please let me know when you are available to discuss this item. Based on work schedules, next week may be better than this week.
