

11/16/04 UCAR TELECON

Assumption

They want to talk about characterization and disposal of their waste material.

Issues

Can they send it to US Ecology?

USE is a RCRA licensed facility and can receive NRC exempt material (<0.05%).

Exact date for confirmatory inspection?

We need RI (Craig Gordon/ Mark Roberts) to tell us:

- a. if the ORISE questions have been answered.
- b. can they put together their inspection plan.
- c. exact date of inspection.

Im still waiting for RI response.

We should find out:

- a. who is their waste broker/are they licensed?
- b. where will the waste material be sent/ can they accept it?
- c. schedule

Likely complaints

- a. Not being able to inspect in early November
 - that was only 2 weeks after receiving FSSR. It always takes us longer
 - we tried to accomodate them but their FSSR did not provide specific information regarding the sampling locations so we had to go back to UCAR to get this info.
- b. ORISE questions
 - I sent them to expedite our ability to set up the inspection. All UCAR needed to do was answer them and/or show where they have been answered previously. No need for attitude.
- c. Transportation Security Information.
 - The questions had already been sent by Hickman. I followed orders to follow up with the licensee. I knew they were probably not applicable but felt that it ws up to UCAR to speak for itself in order to avoid misunderstandings in the future.
