Office of Nuclear Reactor Regulation (NRR)
Items of Interest
Week Ending January 27, 2006

End of Cycle Assessment Meeting Preparations

On January 19, 2006, the staff provided training for the four regional offices on the development of substantive cross-cutting issues in preparation for the upcoming end-of-cycle performance assessment meetings. This training included discussions of the NRC Inspection Manual Chapter (IMC) - 0305, "Operating Reactor Assessment Program," criteria for a substantive cross-cutting issue, recent changes to IMC-0305, and questions from the regional offices.

Risk Management Technical Specifications Meeting

On January 19, 2006, the staff met with Nuclear Energy Institute and industry owner group representatives to discuss the status of Risk Management Technical Specifications (RMTS) initiatives. The RMTS initiatives are a significant agency effort to risk-inform the Standard Technical Specifications. The status of the active RMTS initiatives were discussed and meetings to resolve open issues were planned for the upcoming months. The RMTS initiatives include: (1) modifying the plant end states of Actions in Technical Specifications; (2) allowing licensee use of risk tools to calculate completion times for Actions; (3) allowing licensee determination of surveillance frequencies; and (4) assessing hazard barrier support system effects on technical specification systems. Progress is being made on many initiatives and the meeting brought focus to the areas needing immediate attention and work. The next RMTS meeting is scheduled for May 25, 2006.

Issues Related to Examination and Qualification of Licensed Power Plant Personnel

On January 23, 2006, the Associate Director for Operating Reactor Oversight and Licensing and staff met with the Vice President, Training and Accreditation, Institute of Nuclear Power Operations (INPO), for a public meeting on licensed operator training and qualification. The purpose of the meeting was to discuss INPO's and NRC's initiatives and issues related to the examination and qualification of licensed nuclear power plant personnel. No new policy issues were identified during the meeting.

Office of Nuclear Material Safety and Safeguards (NMSS)
Items of Interest
Week Ending January 27, 2006

Staff Issues Letter on Seismic Design of Yucca Mountain Facilities

On January 25, 2006, staff issued a letter to the U.S. Department of Energy (DOE) providing feedback on DOE's proposed pre-closure seismic design and compliance demonstration methodology of Yucca Mountain facilities. The seismic design of Yucca Mountain facilities is one of the priority pre-licensing issues identified by the staff. The letter informs DOE that its proposed methodology requires additional supporting analyses to demonstrate compliance with 10 CFR Part 63. The letter also provides recommendations for how DOE could demonstrate compliance with the Part 63 performance objectives. The staff is prepared to discuss its feedback in detail at a future technical exchange with DOE.

NRC and Center for Nuclear Waste and Regulatory Analyses (CNWRA) Staff Activities

On January 17-19, 2006, staff from NRC and CNWRA attended a course, which was held at Lawrence Berkley National Laboratory in Berkeley, CA, on the TOUGHREACT and TOUGH2 codes for modeling flow and transport in unsaturated rock. The TOUGH2 code has been used in DOE's performance assessment models of the potential Yucca Mountain Repository. After the workshop, NRC and CNWRA staff visited a drift-shadow experiment site at the Hazel-Atlas mine in the Black Diamond Mines Regional Preserve in Antioch, CA. The drift-shadow experiment is being conducted as part of DOE's Office of Civilian Radioactive Waste Management's Science and Technology Program. The objective of the drift-shadow experiment is to determine the extent to which water might be diverted around drifts, and could be used to evaluate possible effects in the unsaturated zone below a potential geologic repository. The experiment site is being characterized and infiltration experiments are planned for 2006.

Office of Nuclear Regulatory Research (RES)
Items of Interest
Week Ending January 27, 2006

National Aeronautics and Space Administration (NASA) Human Reliability Workshop

From January 16-20, 2006, RES and Office of Nuclear Reactor Regulation (NRR) staff participated as invited guests in the subject workshop at the Kennedy Space Center in Florida. The workshop objective was to obtain recommendations on the selection of human reliability analysis (HRA) methods for use in both a design and more detailed probabilistic risk assessment of NASA's Crew Exploration Vehicle, which is intended to replace the Space Shuttle. This interaction allowed the staff to further pursue NRC/NASA collaboration and to improve the NRC's HRA data methods.

Publication of Draft NUREG-1824, "Verification and Validation of Selected Fire Models for Nuclear Power Plant Applications" for Public Comment

On January 20, 2006, staff published for comment the subject seven-volume draft NUREG which documents verification and validation efforts for five different fire modeling tools. This research supports the revised 10 CFR 50.48, which allows reactor licensees to voluntarily adopt National Fire Protection Association Standard 805, "Performance-Based Standard for Fire Protection for Light Water Reactor Electricity Generating Plants." The public comment period runs through the end of March 2006.

Meeting with North American Electric Reliability Council (NERC)

On January 23, 2006, staff participated in the subject meeting in Princeton, New Jersey. The NERC and the NRC are working under a Memorandum of Agreement to add detailed nuclear power plant (NPP) electrical parameters to the NERC electrical models used in seasonal operational assessments, wide-area planning, and technical studies. The meeting resulted in the development of criteria that will be used to screen NERC grid models for potential impact on electrical performance of NPPs.

Week Ending January 27, 2006

Design Basis Threat; Reopening of Comment Period (AH60-Part 73)

On January 24, 2006, the NRC published a document in the *Federal Register* (71 FR 3791) reopening the comment period on a proposed rule that would amend the regulations pertaining to its design basis threat requirements. The proposed rule would make the security requirements imposed by the Commission's April 29, 2003, design basis threat orders to existing licensees generically applicable. The proposed rule would redefine the level of security requirements necessary to adequately protect public health and safety and common defense and security. The proposed rule would revise design basis threat requirements for radiological sabotage and the theft or diversion of NRC-licensed strategic special nuclear material. The comment period for this action now expires on February 22, 2006.

Risk-Informed Changes to Loss-of-Coolant Accident Technical Requirements; Extension of Comment Period (AH29-Part 50)

On January 25, 2006, the NRC published a document in the *Federal Register* (71 FR 4061) extending the comment period on a proposed rule that would amend the regulations applicable to nuclear power plant licensees. The proposed rule would permit licensees to voluntarily implement a risk-informed alternative to the current requirements for analyzing the performance of emergency core cooling systems during loss-of-coolant accidents. The proposed rule would also establish procedures and criteria for requesting changes in plant design and procedures on the basis of the results of the new analyses. The comment period for this action now closes March 8, 2006.

Meeting Between Commonwealth of Pennsylvania Department of Environmental Protection (PADEP) and NRC

On January 25, 2006, staff from Region I and the Office of Nuclear Materials Safety and Safeguards met with PADEP representatives to discuss the path forward for decommissioning the Quehanna Site located in Karthaus, PA. The meeting included a recap of the decommissioning project to date and discussions of planned building demolition activities, including radiological release criteria, and planned amendments to the Decommissioning Plan. Additionally, since the Quehanna Site is located within a State forest, representatives of the Pennsylvania Department of Conservation and Natural Resources, Bureau of Forestry made a presentation on planned future uses of the site by the Bureau.

Commissioner Lyons visit to Columbia Generating Station

On January 25, 2006, Commissioner Lyons visited Columbia Generating Station. His visit included an extensive tour of the facility and meetings with the Resident Inspectors and senior licensee management.

Arizona Corporation Commission

On January 26, 2006, the Regional Administrator attended an Arizona Corporation Commission (ACC) meeting and answered questions regarding the safety performance of Palo Verde Nuclear Generating Station. ACC has jurisdiction over the quality of service and rates charged by public service utilities, such as Arizona Public Service Company. The meeting was informative and effective in addressing ACC's questions regarding recent technical issues and forced outages at Palo Verde. The Regional Administrator also addressed general questions regarding nuclear plant security and NRC oversight activities.
