Revised Commitment to Submit Best-Estimate Loss of Coolant Accident (LOCA)
Analysis

Reference 1) Letter from Nuclear Management Company, LLC (NMC) to US Nuclear Regulatory Commission, "Clarification of Actions for Corrections to Emergency Core Cooling System (ECCS) Evaluation Models", dated September 24, 2004, Accession No. ML042790321.

By reference 1, NMC committed to provide a new large break LOCA analysis for the Prairie Island Nuclear Generating Plant by March 31, 2006.

NMC has proceeded on a schedule leading to submittal of a new large break LOCA analysis by March 31, 2006. However, pursuant to telephone discussions with the NRC Staff, NMC determined that submittal of a separate analysis for each unit would be more appropriate. In telephone discussions with the NRC Staff on January 24, 2006, NMC discussed an approach to provide a new analysis for each Prairie Island Nuclear Generating Plant unit. Since two separate analyses require additional time to complete, NMC and the NRC Staff agreed that a submittal date of July 31, 2006 provides the necessary additional time and is acceptable to the NRC.

Summary of Commitments

This letter contains no new commitments and revises the commitment in NMC letter dated September 24, 2004 to state:

NMC commits to provide a new Large Break Loss of Coolant Accident analysis for each Prairie Island Nuclear Generating Plant unit by July 31, 2006.

Thomas J. Palmisano
Site Vice President, Prairie Island Nuclear Generating Plant Units 1 and 2
Nuclear Management Company, LLC
