RECEIVED
members of the Nuclear Regulatory Commission,

Please deny the proposed uprate of the Vt-Yankee Nuclear Plant. (Page 1774 Federal Register, Vol. 71, #7, Wed. Jan 11, 2006) This 33 year old plant has had problems in the past and should be given an independent safety assessment as thorough as the one done at Maine Yankee before an uprate is even considered.

Many other residents of Windham County, where the plant is located, agree with me and doubt that the reactor would pass such a test. We would much prefer that the reactor, which is a GE design that would not be licensed today, be closed in 2012 as originally planned.
