Subject: Wellfield release Report

Steve and Paul,

Please consider this formal notification that PRI had a reportable release of production fluid at well 2P-5 at the Smith Ranch-Highland Uranium Project. The release occurred when a union on a 1.5-inch schedule 80 PVC line failed. The volume of released production fluid was approximately 1000 gallons with a uranium concentration of 21 mg/L. The released fluid flowed approximately 200 feet before it soaked into the ground. No fluid was recovered and none of the released fluid entered waters of the state or left the wellfield area. The PVC union was replaced with a brass union. Please let me know if you have any questions.

A written report will be submitted within 7 days describing corrective and preventive actions.

Sincerely,

Ken Milmine
Manager- Health, Safety and Environmental Affairs
Power Resources, Inc.
Smith Ranch-Highland Uranium Project
