PROGRAM SCOPE				
This licensee was a doctors owned multi-specialty diagnostic office and authorized to use licensed material permitted by Sections 35.100, 35.200 and 35.300. The nuclear medicine department was staffed with one full-time technologist who performed approximately 40-50 diagnostic procedures monthly. Typically, in a year, the clinic administered 3-5 dosages for hyerhyriodism. The licensee received unit doses and I-131 capsules from a licensed radiopharmacy. The clinic retained the services of a consulting physicist who audited the radiation safety program on a quarterly basis. This inspection consisted of interviews with licensee personnel, a review of select records, tour of the nuclear medicine department, and independent measurements. The inspector observed licensee personnel demonstrate dose calibrator QA tests, and radiation surveys.
